LETTER OF TRANSMITTAL.

STATE BUREAU OF LABOR STATISTICS,

SAN FRANCISCO, December 1, 1914.

His Excellency, HIRAM W. JOHNSON,
Governor of California.

SIR: I have the honor to submit the Sixteenth Biennial Report of the Bureau.

Respectfully,

JOHN P. McLAUGHLIN,
Commissioner.

ACKNOWLEDGMENT.

I desire to express my appreciation to the employers who have co-operated with this Bureau, to the public officials who have assisted us in carrying out our work, and to my staff who have rendered efficient services.

JOHN P. McLAUGHLIN,
Commissioner.

INTRODUCTION.

The last two years have been the most eventful in the history of the bureau, both from a standpoint of growth and work accomplished. From a practically unknown institution—although established in 1883—this bureau has expanded until it now takes its place among the most important departments of the state government. Branch offices were opened in August, 1913, in Sacramento and in San Diego, in order to take care of the work which could not be satisfactorily handled from the San Francisco and Los Angeles offices.

Our staff has been continually augmented, to meet the demands of our increased duties, until at the present time the bureau employs twenty-eight persons.

The bureau has tried to make itself a department of service to the public. It has not limited its operations merely to the laws which it is directed to enforce, but has undertaken the enforcement of all laws dealing with the problem of labor. In the enforcement of the various labor laws, our policy has been, first, to educate the employers as to the laws relating to labor, by furnishing them with copies of the laws and drawing their attention to violations; and then to rigidly prosecute them when they failed to heed our warning and continued to violate the laws.

Our endeavor has been to make the laws passed by the legislature affecting labor and industry, realities. In carrying out our endeavors we have at times assumed burdens that taxed our department to the utmost.

We shall only draw attention to a few of these laws, the enforcement of which was voluntarily undertaken by the bureau. For example: the Eight Hour Law for Women, as originally passed, made no provision for its enforcement. It was practically doomed to remain a dead letter on our statute books. This bureau, however, undertook to see that the law was obeyed, and informed employers that it would take charge of the enforcement of the law and started a vigorous campaign, the effect of which was to fix in the minds of the employer the provisions of the law and the fact that it could not be violated with impunity.

We also undertook the enforcement of the Payment of Wage Law and Pay Check Law, and devoted a very large part of our time and appropriation in assisting the working men and working women of this state to collect the wages earned by them. The extent of this work will be explained hereafter.

The Camp Sanitation Law was threatened with becoming inoperative, owing to the fact that the State Board of Health, which was charged

with the enforcement of the act, did not have the men or money to make the inspections. This bureau requested the State Board of Health to deputize the agents of this department, and we immediately proceeded to put the law into operation by sending our agents into the various camps.

The bureau has made a study of the conditions in various industries, and has drafted bills seeking to remedy or correct certain conditions found therein. Among the bills drafted by this bureau and passed at the 1913 session of the legislature, are the Act licensing and bonding of private employment agencies, the Camp Sanitation Act, the Act relative to the payment of wages earned in seasonal employment, and the Registration of Factories Act.

In presenting this report, we have adopted a new policy. It is our intention to make special investigations of various industries instead of a general report on all industries; and to condense our information as much as possible in our biennial reports. We believe that information gathered often loses its value when two years elapse before its publication.

In Part I we have discussed briefly some of the more important functions and accomplishments of the bureau.

In Part II we have presented the results of investigations into two of the largest industries in California, namely: the lumber industry and the Portland cement industry.

Part III is devoted to statistics of manufactures and organized labor. The statistics of manufactures is a new department and, while not as complete as might be desired, we believe this can be made extremely valuable if the employers will cooperate with us in the future.

Record of Complaints Filed With Bureau and Investigated During Three Fiscal Years
Ending June 30, 1914.

*In addition many hundreds of cases were settled over the phone in which no records were made.

PART I.

REVIEW.

PAYMENT OF WAGES.

The question of the payment of wages is one that stands out with particular force at this time. The work undertaken by the Bureau of Labor Statistics during the past three years in handling this question, together with the decision of the Appellate Court declaring the wage law unconstitutional, and the taking of the law into their own hands by persons unable to obtain their wages, has focused the eye of the public on this problem.

The problem is fundamental. It strikes at the very root of our economic, social and political structure. The man or woman who has honestly toiled and can not obtain the wages earned, loses faith in humanity and the efficacy of our laws and courts; is often turned out a beggar, vagrant or criminal, or seeks redress by forcible means.

The legislature should enact laws fixing the time and manner of the payment of wages and provide a simple and expeditious method of collecting wages, and which, at the same time, will bear the test of constitutionality.

Nothing has better demonstrated the necessity for such legislation than the work of the Bureau of Labor Statistics during the past three years. In that period there were filed with the Bureau 12,802 complaints against employers for non-payment of wages. The Bureau succeeded in collecting 8,409 of the claims amounting to \$171,808.21. This was a stupendous task, as each complaint had to be investigated, the Bureau sitting in the capacity of a poor man's court, hearing both parties without formality or technical rules of evidence. A description of many of the cases would make a volume of interesting and instructive reading.

On November 23, 1914, the Appellate Court of the First Appellate District declared the wage law unconstitutional and the wage-earner now finds himself practically without recourse, except a slow, expensive civil suit. The Bureau's splendid work was cut short by this decision, and the collection agents again have a free field to prey upon the unfortunate wage-earner.

The number of wage claims filed with the Bureau has grown in leaps and bounds until during the last year they nearly swamped the office. The following figures show the increasing number of claims filed since the work was first undertaken in 1911:

Fiscal year 1912—1,899 claims	\$24,445.59 collected.
Fiscal year 1913—3,573 claims	36,450.69 collected.
Fiscal year 1914—7,330 claims	110,911.93 collected.

These claims do not represent all the work the Bureau has done in the collection of wages. A great deal of assistance was rendered to wage-earners in recovering their wages in connection with bankruptcy proceedings and liens.

Laborers constitute the principal group among the male employees filing claims for non-payment of wages. During the fiscal year ending June 30, 1913, this class represented 22.2 per cent and during the fiscal year 1914, 26.6 per cent of the total number of persons filing claims.

Among the female employees, those engaged in house work are the largest group, being 20.7 per cent of the total for the fiscal year 1913 and 19.4 per cent for the fiscal year 1914.

The number of wage claims filed by actresses and performers was also very large, 110 claims having been filed during the fiscal year 1913 and 455 claims during the fiscal year 1914. (See Tables I and III.)

In the industries against which claims were filed, construction work and general contracting stand out most prominently. During the fiscal year 1913, 695 claims, or 19.4 per cent of the total, were filed against this industry, while during the fiscal year 1914, 1,475 claims, or 20.1 per cent of the total were filed.

Restaurants come next with 378 claims, or 10.6 per cent during the fiscal year 1913, and 696 claims, or 9.5 per cent during the fiscal year 1914.

Then follows private homes with 350 claims, or 9.8 per cent during the fiscal year 1913, and 596 claims, or 8.1 per cent during the fiscal year 1914. (See Tables II and IV.)

PAY CHECK LAW.

The pay check law was passed in 1911, at the same time as the payment of wages law. These two laws are closely related, but the pay check law fared better at the hands of the court than its companion law.

In the case of the *People vs. Pasadena Foundry Company*, tried in the Superior Court of Los Angeles County, Judge McCormick declared the law constitutional. No appeal was taken from this decision, and it has generally been conceded that the right to compel payment of wages in cash or negotiable paper is a valid exercise of police power. Our law provides that:

No person, firm or corporation engaged in any business or enterprise within this state, shall issue, in payment of or as an evidence of indebtedness for wages due an employee, any order, check, memorandum or other acknowledgment of indebtedness, unless the same is negotiable, and is payable upon demand without discount in cash at some bank or other established place of business in the state.

The law is at present almost universally observed. A few violations have come to our attention, but they have been corrected as soon as the employers were notified. Most of these violations were combined with

the question of non-payment of wages, and were adjusted. During the fiscal year 1913 we prosecuted only one case for a violation of this law, and during the fiscal year 1914 but two cases.

A peculiar phase has developed out of the enforcement of this law in respect to the issuance of coupons, principally by lumber companies. These coupons are issued between pay days, and the companies claim that it is only for the accommodation of their employees, being a credit extended to them before the wages are due and payable. This question has been submitted to the Attorney General, and we are awaiting his opinion.

PAYMENT OF WAGES IN SEASONAL EMPLOYMENT.

This law, passed at the 1913 session of the legislature, grew out of investigations made by this bureau into the employment of labor shipped from San Francisco to work in the salmon canneries of Alaska. The report on the investigations of the Bureau is contained in the Fifteenth Biennial Report. The act was drafted by the Bureau, and provides as follows:

Section 2. Upon application of either the employer or the employee, the wages earned in seasonal labor, shall be paid in the presence of the commissioner of the bureau of labor statistics or an examiner appointed by him.

Section 3. The commissioner shall hear and decide all disputes arising from wages earned in seasonal labor and he shall allow or reject any deductions made from such wages; *provided, however*, that he shall reject all deductions made for gambling debts incurred by the employee during such employment and for liquor sold to the employee during such employment.

At the end of the canning season of 1913, the examiners of this bureau supervised the paying off of 1,382 men who had returned from Alaska. The total amount of the wages earned by these men was \$237,447. After allowing for all legitimate deductions, the men were paid a net average of over \$110 each. At the end of the 1914 season, we supervised the paying off of 1,528 men. The total amount of wages earned by these men was \$259,134, and after allowing deductions each man received a net average payment of over \$120.

It is interesting to compare these figures with those collected in the investigation made by this Bureau in 1912, when it was found that the net average wage paid to the men on their return to San Francisco from the salmon canneries was less than \$35.

This law has been a boon to the men employed at the canneries. They are a helpless class and the prey of every type of human shark. In the past two years during which the men have been paid off under the supervision of this office, they have at least received the wages due them after their season's work. This has a particular bearing on the problem of unemployment. In years gone by these men were cast adrift in the city after their return from Alaska, practically penniless.

Since the Bureau took charge, almost every man has received at least one hundred dollars upon his return to San Francisco.

The effectiveness of this law, however, is now lost, as the procedure for its enforcement rested upon the payment of wages law, which has been declared unconstitutional. There still remains, however, one thing to be done for these men, and that is to place them in the same category as seamen and to exempt their wages from attachment. We are satisfied that many of the attachments against the wages of these cannery hands are not for *bona fide* debts. During 1913 we had a great deal of trouble with the attachments levied while our examiners were paying off the men. Before paying for the season 1914, we notified most of the attorneys engaged in this practice that the Bureau would fight any attachment it had reason to believe was not for a *bona fide* debt. This had the effect of greatly reducing the number of attachments levied. As most of the men are ignorant, they pay the attachments and costs in order to get whatever money remains of their wages. They are unable to hire attorneys to fight their cases, and are usually in such absolute need that they are willing to make any sort of a sacrifice.

PRIVATE EMPLOYMENT AGENCIES.

Two years ago the Bureau drafted and succeeded in having passed one of the most drastic laws for the regulation of private employment agencies. The essential features of this act are that every agency is required to obtain a license from the Bureau of Labor Statistics, and furnish a bond. Records must be kept and receipts issued on forms prescribed by the Bureau. Where the employment lasts less than seven days, by virtue of discharge, the fee must be returned. This provision was inserted to put a stop to the practice of discharging men in order to divide fees between employers and the agents. The dividing of fees was also prohibited. If a job was misrepresented, the fees and expenses must be returned.

During the fiscal years 1914 there were filed 923 complaints against employment agencies. Each of these complaints was investigated, and in 632 cases fees and expenses to the amount of \$2,328.30 was ordered returned. During the fiscal year 1913 there were filed 479 complaints, and in 364 instances fees and expenses to the amount of \$1,384.45 were ordered returned to applicants. These figures, however, do not in any degree represent the total amount returned by agencies to applicants failing to obtain work. Most of the agencies tried to adjust the cases in order to avoid being cited before the Commissioner. The majority of cases in which complaints are filed in the bureau are ones which involve some dispute. The Bureau has required the agencies to keep a record of all fees and expenses returned by them, and during the six months from April 1st to September 30, 1914, the employment agencies

throughout the state returned \$25,263.33 in fees and \$568.80 in expenses to applicants who failed to secure employment. (See Tables V, VI, VII.)

The new act went into effect at the beginning of the license year, April 1, 1914, and the agencies were required to file with the Bureau a record of all the positions furnished and fees collected by them. Records of private employment agencies filed in the office of the Bureau during the first six months following the introduction of the new law, show that these agencies furnished 101,745 positions to men, and collected \$197,349.78, or an average of \$1.49 for each position. They also furnished 24,841 positions to women and collected \$66,889.71 in fees, or an average of \$2.69 for each position. This makes a total of 126,586 positions furnished and \$264,239.50 fees collected in a period of six months. (See Tables V, VI, VII.)

In Table VIII is presented a list of the licensed agencies in the State of California.

FREE EMPLOYMENT BUREAUS.

Many bills for the establishment of free employment bureaus by the state were introduced at the last session of the legislature, but none of them became laws. One bill was passed, but was not signed, owing to the fact that this Bureau did not deem the appropriation which it carried adequate to properly conduct the offices.

The recurrence of the unemployment problem has accentuated the need of the state assisting in the distribution of labor. After several investigations made by this Bureau on the subject of unemployment, we are of the opinion that the most definite and concrete work that the state can do in helping to solve the problem is the establishment of free employment offices. We have often stated that employment offices do not create jobs, but they do bring the man and the job closer together. With a proper system of employment bureaus, less time and money would be spent by labor in seeking employment. There could also be saved to labor a large part of the \$500,000 now paid yearly in fees to private employment agencies.

The most important factor in the solution of unemployment is to conserve as much as possible the earnings of the workers, in order that these earnings may be used to tide them over until employment is found. We do not hesitate to say that the Bureau has done more constructive work in this direction than has been done by any other governmental agency in any state. In collecting for wage-earners during the past three years wages amounting to over \$170,000; in supervising the payment of wages of men engaged in seasonal employment, securing for them their wages amounting to over \$500,000; and in regulating private employment agencies so that applicants who failed to secure positions were reimbursed for fees paid and expenses incurred, we have

done the things that, in our judgment, have relieved to a very marked degree the distress of unemployment, particularly in those cases where the workers were without funds.

In order to make free employment bureaus a real success, it will be necessary to further restrict, and eventually eliminate, private employment agencies, as was done in the State of Washington, by an initiative measure, which prohibited the collection of fees from workers for the securing of employment or furnishing information leading thereto.

We recommend that the state establish free employment bureaus in at least the following cities: San Francisco, Los Angeles, Oakland, Sacramento, San Diego and Fresno, and that the legislature appropriate an amount sufficient to insure the proper conduct of these offices.

CHILD LABOR.

The child labor law was amended in 1913, along lines suggested by this Bureau. The legislature, however, failed to pass our bill regulating children employed in street trades. The principal changes in the law were the fixing of an eight hour day and forty-eight hour week for all minors under eighteen years of age, and the raising of the educational requirements to a completion of the grammar grades or attendance at night school.

The aim of this Bureau has been to secure for each child, if possible, a grammar school education. Under the amended law, children under sixteen years of age are permitted to work when provided with the following permits:

Permit to Work—Temporary, where the minor is between the ages of twelve of age and has completed the prescribed grammar school course and is physically fitted for the work contemplated.

Permit to Work—Temporary, where the minor is between the ages of twelve and fifteen years, and where the parents or guardians of the child are incapacitated through illness, or where the father has died or deserted and there are no other means of support. In such cases the permit is issued only for the time deemed necessary, and in no case for more than six months.

Age and Schooling Certificates, where the minor is between fifteen and sixteen years of age, and must have completed the prescribed grammar school course or attend night school.

Vacation Permit, where the minor is over twelve years of age, but for use only during the regular vacations of the public schools and the regular weekly school holidays.

The Bureau prepared and had printed the various forms of permits required under the new law, and distributed the same to the persons authorized to issue these permits. The law became effective on August 11, 1913, and up to the end of the school year, June 25, 1914, the following permits were issued in the state. (See Tables IX, X, XI.)

	Total	Male	Female
Age and schooling certificates.....	1,373	989	384
Permits to work—graduate.....	207	164	43
Permits to work—temporary.....	341	275	66

Of the total of 1,373 children to whom Age and Schooling Certificates were issued, 419 had graduated from the grammar grades, while 954 were obliged to attend night school. The record of nativity of these children shows that 562 were born in California, 547 were born in the rest of the United States, and 264 were foreign born. (See Table XII.)

Of a total of 207 children to whom Permits to Work—graduate—were issued, 86 were born in California, 104 in the rest of the United States and 17 in foreign countries. (See Table XIII.) Of a total of 341 children to whom Permits to Work—temporary—were issued, 166 were born in California, 132 in the rest of the United States and 43 in foreign countries. (See Table XIV.) Most of these permits were issued for a period of six months. (See Table XV.)

During the fiscal year 1914 there were filed in the bureau 173 complaints for violations of the child labor law, and during the same period 21 cases were prosecuted. During the fiscal year 1913 there were filed 108 complaints and 28 cases were prosecuted.

We believe we have the child labor problem well in hand, and that the majority of the employers are earnestly striving to live up to the law.

EIGHT HOUR LAW FOR WOMEN.

As already stated, the eight hour law for women, as originally passed, made no provision for its enforcement. This bureau assumed the responsibility and notified the employers that the law would have to be observed. In 1913 the law was amended and its enforcement placed in this department. The law was also amended to include public lodging houses, apartment houses and hospitals; exempting the graduate nurses in hospitals.

The constitutionality of the original act was attacked in what is generally known as the "Hotel case," but the law was sustained by the Supreme Court of the State of California, in *Ex parte Miller*, 162 Cal. 687. An appeal from this decision was taken to the Supreme Court of the United States, where it will be heard either in December, 1914, or January, 1915.

The amended act was attacked by the hospitals in a petition filed in the District Court of the United States for the Northern District of California, to restrain the Labor Commissioner from enforcing the law against the Merritt Hospital of Oakland. The petition was denied—*William B. Bosley et al. vs. John P. McLaughlin et al.*—and the case was appealed to the Supreme Court of the United States where it will be heard at the same time as the Miller case.

During the fiscal year 1914 there were filed 682 complaints for violation of the eight hour law for women, and 37 cases were prosecuted. During the fiscal year 1913 there were filed 473 complaints and 33 cases were prosecuted. Our records of complaints filed for

violation of this law show that hotels, apartment and lodging houses and restaurants were the principal offenders. (See Tables XVI, XVII.)

HOSPITAL FEES.

The practice of collecting hospital fees from employees was practically universal up to about two years ago. Many companies collected fees from employees and gave nothing in return. In 1913 this Bureau drafted a bill forbidding any company from deducting hospital fees unless they maintained a hospital or made proper arrangements with a hospital for the care of their employees when sick or injured. It also provided for an accounting of the fees collected. The bill, however, failed to pass, but fortunately the "Workmen's Compensation Act" was passed. Although the latter law provided for medical care to injured employees, many companies still continued to collect hospital fees for illness other than that arising out of injuries sustained in the course of employment.

When the "Workmen's Compensation Act" went into effect, many companies attempted to apply a part of the hospital fees to the payment of compensation, but this was quickly discouraged by the Industrial Accident Commission. Of course, we are unable to tell whether or not this is still practiced, owing to the fact that there is absolutely no accounting of fees collected by these companies to any governmental bureau.

An investigation of the collection of hospital fees was made by this bureau in May, 1914, and we are satisfied that most of the evils connected with it have now been wiped out, particularly the practice of hiring men for one or two days and deducting hospital fees of one dollar from their wages for that period of time.

In our investigation we secured data from 201 of the largest companies engaged in various industries in the state. Of this number, 25 maintained regular or emergency hospitals, and 85 companies had arrangements with either hospitals or doctors. Eighty-nine companies collected hospital fees; 19 of them collected less than \$1 per month, 67 collected \$1 and 3 collected \$1.25. Payment of hospital fees was obligatory in 64 companies. In 6 companies no fees were collected when the work lasted less than five days, and in 7 companies when the work lasted less than ten days. In most instances the fee was prorated for fractions of a month.

While the Bureau does not seek to discourage men from setting aside a small portion of their earnings to take care of them during sickness other than that arising from accident in the course of their employment, we are of the opinion that there should be an accounting by companies of the moneys collected out of the wages of employees, and a proper

supervision to insure that the money so collected is spent for the purpose for which it was intended, particularly in view of the fact that our investigation showed that at the present time the hospital fees collected by companies from their employees in this state amounts to over \$600,000 a year.

The subject of "Hospital Fees" is also discussed in Part II in connection with the lumber and Portland cement industries.

CAMP SANITATION.

As the result of some investigations made in 1912, this Bureau drafted a bill providing for the sanitation of camps. Under the original draft, the enforcement of the act devolved upon this Bureau, but it was amended in the legislature and the enforcement placed in the hands of the State Board of Health. The State Board of Health, however, was without funds or men to enforce the provisions of the law, so this Bureau, unwilling to see such an important piece of legislation made inoperative, notified the State Board of Health that our special agents would be used for the work. As soon as the law became effective on August 10, 1913, we sent our agents to begin the inspection in the lumber and construction camps.

One of the most important features of the act was the section providing that:

The bunks or beds shall be made of iron, canvas, or other sanitary material, and shall be so constructed as to afford reasonable comfort to the persons occupying such bunks or beds.

This Bureau maintained that wooden bunks were not sanitary and did not afford reasonable comfort, and insisted that steel or other sanitary bunks be used. As a result of our inspection, over 7,000 steel banks have been installed, taking the places of the old vermin infested wooden bunks.

After the Bureau had set the law into operation, the Immigration and Housing Commission requested that they be permitted to take up the work in connection with their housing investigations. The request was acceded to by this Bureau.

The results of our pioneer investigations into camp sanitation are to be found in Part II, in connection with the report on lumber and Portland cement industries.

COMPLAINTS.

The Bureau has kept a systematic record of all complaints filed. Each complaint contains a statement of the alleged offense. An investigation is made in each complaint filed, and the results of this investigation recorded.

During the fiscal year 1914, complaints of various kinds to a total of 9,621 were filed, as against 4,957 complaints during the fiscal year 1913.

It is rather difficult to present the enormous amount of work entailed in investigating close to 10,000 complaints in one year. (See Tables XVIII, XIX.)

PROSECUTIONS.

As stated in our introductory remarks, the policy of the Bureau has been first to warn and then prosecute persons violating the law. It has not been our desire to prosecute merely for the purpose of making a record. Prosecutions were only resorted to when the violations were flagrant and we were obliged to maintain the effectiveness of the law.

During the fiscal year 1914, the Bureau conducted 130 prosecutions, securing 70 convictions; while during the fiscal year 1913 the prosecutions totaled 118 and the convictions 66. In most of the cases where the action was dismissed by the court, it was done at the request of the Bureau, especially in cases of non-payment of wages when the wages were paid to the complainant. (See Table XX.)

*These cases were against newsboys, and this Bureau did not desire to obtain convictions against the boys. The arrests were made more in the nature of a warning.

PART II.

THE LUMBER INDUSTRY IN CALIFORNIA.
THE PORTLAND CEMENT INDUSTRY IN CALIFORNIA

THE LUMBER INDUSTRY IN CALIFORNIA.

A Survey of Labor, Living and Other Conditions.

PART I.—GENERAL.

During a visit of the State Labor Commissioner to the railroad construction camps in the northern part of the state, he was impressed with the insanitary condition surrounding the camps in which laborers were housed, and the total disregard of the employers for the health and comfort of their employees. Men were found sleeping on hard bunks, in open tents, with three feet of snow on the ground, the employer not even furnishing straw for bedding.

In the past, little or no attention has been paid to the men hidden away in the mountains and forests, building our railroads, our irrigation systems and power plants, and cutting our timber. They have often been treated as so many cattle. The camps provided for them were makeshifts, unclean and insanitary, with practically no accommodations.

In view of these circumstances, this Bureau prepared a bill, which became a law on August 10, 1913, providing for the sanitation of camps. This act reads, in part, as follows:

Section 1. In or at any camp where five or more persons are employed, the bunkhouses, tents and other sleeping places of such employees shall be kept in a cleanly state, and free from vermin and matter of an infectious and contagious nature, and the grounds around such bunkhouses, tents or other sleeping places shall be kept clean and free from accumulations of dirt, filth, garbage and other deleterious matter.

Section 2. Every bunkhouse, tent or other sleeping place used for the purpose of a lodging or sleeping apartment in such camp, shall contain sufficient air space to insure an adequate supply of fresh air for each person occupying such bunkhouse, tent or other sleeping place. The bunks or beds shall be made of iron, canvas or other sanitary material, and shall be so constructed as to afford reasonable comfort to the persons occupying such bunks or beds.

Section 3. It shall be the duty of any person, firm, corporation, agent or officer of a firm or corporation employing persons to work in or at such camps and the superintendent or overseer in charge of the work in or at such camps to carry out the provisions of sections 1 and 2 of this act.

(Chapter 182, Statutes 1913.)

The bill was originally drafted to be enforced by this Bureau, but was amended and its enforcement was placed under the State Board of Health. The Wheatland riot had occurred on August 3d, seven days prior to the effective date of the Camp Sanitation Act, thus focusing public attention on the matter of camp conditions and showing the urgent need for supervision and regulation.

Having initiated the only law on the statute books on this subject, this Bureau undertook an investigation of the camps throughout northern California, and, by an arrangement with the State Board of Health, also undertook the enforcement of this law. This was begun on August 10th, and was concluded at Christmas, 1913, at which time all the logging camps, which had not closed down, had been visited.

Construction and railroad camps were also included in the tour of inspection.

This Bureau assigned J. W. Atkins, Special Agent, to make this pioneer inspection of the lumber industry, and the results of his investigations are presented in this survey.

The enforcement of the Camp Sanitation Law was confined to the northern part of the state.

Authority. Under the act creating this bureau (Act No. 1828, Statutes 1883), it is specifically authorized, among other things, to collect and present, in biennial reports, statistical details relating to the hours and wages of labor, cost of living, the number, age, sex, and conditions of persons employed, the nature of their employment, the extent to which the apprenticeship system prevails in the various industries, the number of hours of labor per day, the average length of time employed per annum, the net wages received in each of the industries, the number and conditions of the unemployed, their age, sex and nationality, together with the cause of their idleness, the sanitary conditions of lands, workshops, dwellings, the number and size of rooms occupied by the poor, the cost of rent, fuel, food, clothing and water in each locality of the state, the extent to which labor saving processes are employed to the displacement of hand labor, the number and condition of the Chinese in the state, their social and sanitary habits, as well as other facts pertaining to labor and manufactures.

The act forbids the use of the names of individuals, firms and corporations supplying information in the reports of this Bureau; hence, the data here submitted has been made as impersonal as possible. The intention has been to submit plain facts with relation to the subjects discussed and affecting the labor conditions in the lumber industry.

This Bureau is specifically charged with the enforcement of various laws, particularly the "Employment Agency Law," the act relating to the "Sanitation and Ventilation of Factories and Workshops," the "Child Labor Law," and the "Eight Hour Law for Women." An examination of the act creating this Bureau, together with the various laws here enumerated, will make it evident that this Bureau has ample power to conduct, at any time, such an investigation and to enforce such laws as are here enumerated.

Special agents have access to all places and works of labor while in the performance of their duties, and in the enforcement of the two last

Interior of a permanent bunkhouse, as found by the special agent, furnished with "flops" and wooden bunks or "primitive, temporary wooden nests—vermin incubators—to stable human beings, who are forced by necessity to occupy them."

named acts they "have all the powers and authority of sheriffs or other peace officers, to make arrests for violations of the provisions of this act, and to serve any process or notice throughout the state."

Statistical. Census returns for 1909, from all manufacturing establishments in the United States, give the relative importance of the leading industries as follows:

Industries	No. of establishments	Average number of wage earners	Value of products	Value added by manufacture
Slaughtering and meat packing-----	1,641	89,728	\$1,370,568,101	\$167,740,317
Foundry and machine shop products--	13,253	531,011	1,228,475,148	688,464,009
Lumber and timber products-----	40,671	695,019	1,156,128,747	648,011,168
Iron and steel, steel works and rolling mills -----	446	240,076	985,722,534	328,221,678

From the above table, it may be seen that a much larger number of persons are employed in the production of "lumber and timber products" than in any other single manufacturing industry in this country.

In accordance with chapter 255, statutes of 1913, this Bureau of Labor Statistics undertook this year (1914) to compile the annual state census of manufactures. Blanks for the purpose of securing statistics were mailed to all manufacturing establishments.

The returns, as compiled from the reports received in the lumber and other industries, are elsewhere tabulated. A large number of manufacturers failed to comply with the law, and in consequence the showing in this industry is not as good as it should be.

From these reports a comparative table has been compiled, showing the amount of payments to wage-earners of the twelve largest companies in the state for 1913. It is here submitted in order that the public may secure some conception of the importance of this industry.

These figures reflect the extensive and efficient organizations that are maintained by these and other companies to manufacture and dispose of their output:

Comparative Statement of Employees and Wages of the Principal Lumber Companies in California for 1913.

Rank	Officers of corporations	Superintendents and managers	Salaries ¹	Clerks, stenographers, salesmen and other salaried employees	Salaries	Payments to wage earners, including piece workers	Totals—salaries and wages
1	6	14	\$81,500	38	\$63,000	\$1,233,040	\$1,377,540

12	1	2	12,250	5	6,060	230,444	248,754

¹Combined salaries of officers and managers.

²Salaries of superintendents and managers.

³Combined reports of one company.

The reports of eleven of these companies show a variation in the total number of employees on their pay rolls, from 5,932 in January, 1913, to a maximum of 10,957 in July, 1913. The average of these two extremes approximates for these eleven companies to one half of the total number (18,560) of wage earners of all companies of whom statistics of wages were secured. These statistics were obtained for the purpose of determining the average wage in each occupation.

Four of these companies are located in the redwood districts, while eight are in the pine districts.

Comparative Statement of the Number of Wage Earners, on the 15th or 31st Days of Each Month of 1913, as Shown by the Reports of Principal Lumber Companies of California.

No.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.

¹For year 1912.

²For year 1914.

Returns from smaller lumber companies, than those here tabulated, show a much greater variation in the number employed in January and July. Evidently it is by virtue of their more thorough organization and trade connections that the larger companies are enabled to operate throughout the year.

One report states: "In the production or manufacture of lumber, the greater part of the work is not done in a factory, but, beginning with the falling of the trees in the woods, includes a greater proportion of handling expense and transportation."

Handling expense and the present prohibitive freight rates, result in the almost total loss of the waste fuel wood produced in logging operations, and amounting in value to thousands of dollars annually. If the transportation charges were reduced, a large number of men could secure work in the manufacturing and shipping of cord wood, and the cost of fuel in the cities would be greatly reduced.

It is hard to conceive of the enormous quantities of wood fuel which is left behind to rot, to furnish material for forest fires, or to be burnt over at the close of the season when the "slashings" are destroyed by some companies.

Statistics show that of the trees which are felled, thirteen per cent of them are left to rot as stump, top and branches; at the sawmill, forty-three per cent of the trees which are felled go into sawdust, bark, slabs, and so on; two per cent are lost in seasoning; three per cent in planing and finishing; four per cent more goes into the kindling heap when a house is built. Only thirty-five per cent of the original trees emerge in the form of a building, and when the carpenters are careless the proportion is less than that.

The "Thirteenth Census of the United States for 1910," has this to say of lumber and timber products in California:

This industry embraces logging operations, sawmills, planing mills, and establishments engaged in the manufacture of wooden packing boxes. It does not include mills engaged exclusively in custom sawing. The industry is the leading one in the state, giving employment in 1909 to 22,935 wage earners, or, 19.9 per cent of the total for all manufacturing industries, and the value of its products amounted to \$45,000,276 or 8.5 per cent of the total. While the growth of the industry during the five year period, 1904-1909, was considerable, its development was much less rapid than during the earlier period, 1899-1904.

The census reports were based on the following:

NUMBER OF ESTABLISHMENTS.	
Individual -----	199
Firm -----	149
Corporation -----	296
<hr/>	
Total -----	644

These 644 establishments employing 22,935 wage-earners, produced products of the value of \$45,000,276 in 1909, making this the leading manufacturing industry in this State.

The value of the lumber and timber products was 8.5 per cent of the total production of all establishments.

Statistics, as above recorded, of the lumber industry in California, Oregon and Washington, show that in each State this is the leading manufacturing industry.

Tables have been compiled, based on statistics of operations in 1909, the latest obtainable census data, and are here presented:

Comparative Table, by States, of Employees in the Lumber Industry.

States	No. of estab- lishments	Total employees	Propri- etors and firm members	Salaried officers, supts., and managers	Clerks		Wage earners, average number
					Male	Female	
California ----	644	25,079	547	647	799	151	22,935
Oregon -----	713	16,833	846	453	385	83	15,066
Washington ---	1,263	47,447	1,013	1,414	1,095	176	43,749

This disreputable appearing permanent bunkhouse, equipped with double-deck wooden bunks, was being occupied by six employees of a lumber company.

Comparative Table, by States, of Payments for Services.

States	Officials	Clerks	Wage-earners
California -----	\$1,343,978	\$893,347	\$15,651,040
Oregon -----	824,935	442,401	10,171,862
Washington -----	2,427,125	1,188,254	31,326,917

Comparative Table, by States, of Value of Lumber Products.

States	Value of products	Value added by manufacture
California -----	\$45,000,276	\$26,631,376
Oregon -----	30,200,000	17,787,000
Washington -----	89,154,820	52,275,954

The census reports for 1909, show the following segregation by months, of the number of employes in the manufacture of "lumber and timber products" in California:

California.

Average number of employees.

Months	In mills	In logging operations	Totals
January -----	12,150	2,251	14,401
February -----	12,074	2,367	14,441
March -----	12,793	4,032	16,825
April -----	15,014	6,839	21,853
May -----	17,525	9,230	26,755
June -----	18,681	9,852	28,533
July -----	19,131	9,855	28,986
August -----	19,148	9,813	28,961
September -----	18,833	9,099	27,932
October -----	17,990	7,845	25,835
November -----	16,897	5,910	22,807
December -----	14,795	3,099	17,894

Like the table previously given, showing the variation by months, compiled from statistics secured from the eleven leading companies of this State, this table shows a minimum number at work in January, 1909, of 14,401, and a maximum in July of 28,986, or, twice the minimum number. The greatest variation is shown in the number engaged in logging operations. This ranges from a minimum of 2,251 in January, to a maximum of 9,855 in July, 1909, or, an increase of over three hundred per cent. The variation in the mills ranges from 12,074, in February, to 19,148 in August—an increase of over fifty per cent.

A similar segregation for 1913 of the total number of employees in the mills and in the logging operations, is not possible with the data at hand. Reference to the comparative statement, previously given, of eleven California companies, showing by months the average number of wage-earners employed by them, discloses a far less variation in the number of employees, engaged throughout the year, in the redwood districts than

Interior of a tent showing the usual type of double-deck wooden bunks. Ten to fourteen men may be thus housed in one tent.

in the pine districts. This is due to the fact that many employers in the latter districts are unable to operate during the winter season due to the snow and the severity of the weather.

For purposes of comparison, the following tables showing the 1909 census reports on variations of employment in the manufacture of "lumber and timber products," in Oregon and Washington, are here given:

Oregon.

Average number of employees.

Month	In mills	In logging operations	Total Number
January -----	8,496	3,049	11,545
February -----	9,480	3,362	12,842
March -----	10,427	3,926	14,353
April -----	11,271	4,396	15,667
May -----	11,611	4,580	16,191

December -----	28,882	13,486	42,368

From the foregoing figures, it is shown that more men are employed in the manufacture of "lumber and timber products" in Washington than in California. California, however, leads Oregon in this matter. These figures also show a far less variation in employment in the mills and in the logging operations in Oregon and Washington than in California.

This may be attributable to the fact that in the northern states the logging work is done nearer the Pacific Ocean, where the winter weather is less severe than it is in the pine districts of California. These are located along the Sierra Nevada Mountains, where the camps are usually forced to close down from November and December until April and May.

Some California managers claim that it is because of the large tracts of fine, merchantable timber, convenient to cheap transportation, the smaller logging costs, and the economies effected by the continuity of operations throughout the year, of their northern competitors, that they are thereby enabled to ship their lumber to California and successfully compete with the companies of this state in their home markets.

Scope of Investigation. In the thirty-one years of this Bureau's existence, this survey is the first one to be completed in the lumber, or any other industry. It is due to the cordial co-operation of the managers, superintendents, and foremen, that it was possible to make so thorough an investigation of camp and labor conditions.

As hereinafter described, the lumber companies of the state may be divided into two groups: those operating in the pine forests of the Sierra Nevada Mountains and those in the redwood forests along the mountains of the Coast Range. These two groups may be again divided geographically, as elsewhere stated, into northern and southern districts.

The tour of inspection in 1913 embraced the companies operating in the northern pine and redwood districts, but did not include any plants in the metropolitan districts, as San Francisco and Sacramento.

The camp sanitation law became effective August 10, 1913, on which date the inspections were begun and these were continued until Christmas, 1913. For the purpose of completing the statistics and general information previously secured regarding this industry, the inspections were continued during the summer of 1914, and the other lumber plants and logging camps of southern California were visited.

The establishments inspected included those directly connected with the production and manufacture of lumber and its products, as well as a few other manufacturing companies which were conveniently accessible.

The plants of all important sawmill companies in the State, excepting three which had closed down for the winter, were visited. This report is based on conditions noted during the survey of establishments in thirty-five cities or towns, twenty-three "company towns," and one hundred eighteen camps located in the nineteen counties where lumbering operations are conducted. Inquest records returned during the year previous to the date of visits were investigated in the offices of county clerks of fourteen of these counties.

These plants comprise forty-seven sawmill companies operating fifty-one sawmills, fifteen box factories, one match factory, one veneer factory, six sash and door factories, besides numerous stores, hotels, hospitals, planing mills, lumber yards, lath and shingle departments operated in conjunction therewith; eight redwood shingle factories;

three independent box factories; one shingle and lath factory; two sash and door cutting establishments; one door factory; two door and planing mill plants; and one cooperage plant.

In addition, five employment agencies, two construction camps, and twenty-one railroad construction camps, were likewise visited.

Nationality, efficiency, and wage statistics were secured of employees of all these companies. In the lumber industry the total was about 20,000, of whom 18,560 employees have been classified, by occupations, for the purpose of determining average wages.

Employment Agencies. In the past, laborers, mechanics and others have been victimized by unscrupulous employment agencies, which promised work upon payment of fees. Positions were promised in remote places, inconvenient and expensive to reach, and too often the employee was discharged within a short time, in order that another might take his place. In such cases, the presumption is that the employment agent divided his fees with the foreman of the work. Then the employee had to return to the same or another agent and start over again, first paying another fee for the next job.

The rate of wages, the hours of employment, whether or not board and lodging was to be furnished, the cost of transportation and whether or not it was to be paid by the employee, the time of such service, whether definite or indefinite, all were often misrepresented, by the agent, to the disadvantage of the applicant.

By the "Employment Agency Law," as amended in 1913, this Bureau directly supervises and licenses all private employment agencies, conducted for profit, and prescribes the books, registers and receipts which shall be used. This is the best law on this subject which has been adopted anywhere in the United States.

According to this law the receipts must specify the conditions of employment, as mentioned above; the name and address of the agency issuing them; the name and address of the person to whom the applicant is sent for employment; the name of the applicant; the date; the amount of fee, and the kind of work or service to be performed:

The act further provides that:

Section 12. No such licensed person shall send out any applicant for employment without having obtained, either orally or in writing, a bona fide order therefor. In case the applicant paying such fee fails to obtain employment, such licensed agency shall repay the amount of said fee to such applicant upon demand being made therefor; provided, that in cases where the applicant paying such fee is sent beyond the limits of the city in which the employment agency is located, such licensed agency shall repay in addition to the said fee any actual expenses incurred in going to and returning from any place where such applicant has been sent; *provided, however*, where the applicant is employed and the employment lasts less than seven days, by reason of the discharge of the applicant, the employment agency shall return to said applicant the fee paid by such applicant to the employment agency.

View of a cabin interior showing single wooden bunks, and also how a congenial party of three men may keep a room in good order. Note the difference between this cabin and the views of permanent bunkhouses where many are housed together.

Section 13. No licensed person conducting an employment agency shall publish or cause to be published, any false or fraudulent or misleading information, representation, notice or advertisement; all advertisements of such employment agency by means of cards, circulars, or signs and in newspapers and other publications, and all letter-heads, receipts, and blanks, shall be printed and contain the licensed name and address of such employment agent and the word "agency," and no licensed person shall give any false information, or make any false promise or false representation concerning an engagement or employment to any applicant who shall register or apply for an engagement or employment or help.

(Chapter 282, Statutes 1913.)

As a result of this law, there has been a large reduction in the number of complaints from woodsmen, railroad and construction men, as well as others who were the chief losers by the former system.

Employees and Employment. Most of the men engaged in lumbering return each year to the various plants and camps when they open up in the spring and continue work until these plants slacken operations or close down for the winter season. The principal employees are retained all the year.

Work is had either by writing in advance for a position or by application to employment agencies. A number of the companies have offices in San Francisco and engage men there for the plants. Those engaged for the redwood lumber companies are shipped by boat to Eureka, Crescent City, and Fort Bragg, whence they travel to the various places of work.

Employees in the lumber industry are steadier than those engaged in railroad or other construction work, but, like the latter class, they frequently quit their positions to seek work elsewhere, or to take a vacation until they have spent their "stake." (A "stake" is a certain sum of money which an employee has previously determined upon earning before he will quit his position.)

A writer has stated regarding woodsmen that:

Years of work in the big timber have made them as hard physically as they are morally. They work long hours, with breakfast at five and supper at six. Their days are full of hardship and with more than a proportionate share of danger. Money is hard earned by them but is rarely measured in terms of work but more often in the size of debauches that it will permit them.

The pay roll for August, 1913, of a certain large company, having first class boarding house accommodations for its employees, disclosed the fact that of sixteen hundred ninety-four men employed, three hundred ninety-one had quit work that month. This ratio is not unusual.

Labor conditions are quickly reflected in the lumber industry, for, when times are hard and work scarce, as in 1914, the employees are steadier in their positions, but when work is plentiful as it was during 1913, the men are less reliable and more likely to quit work or change from place to place for no apparent reason.

Many of the men, who are furnished transportation by the companies directly, or through the employment agencies, accept and use this transportation, by trains or boats, but refuse to go to work, and hire out elsewhere. This is done to evade the repayment of the amounts which have been advanced to bring them to the positions they accepted.

The extent of this practice, as shown by the books of one company, covering a period from March 1, 1912, to November 30, 1912, is as follows:

Advanced fares to-----	527 men
Paid or remained season-----	243 men
Did not work-----	284 men
Percentage of men that do not work, but have fares advanced-----	54
Loss in money (fares only)-----	\$2,770 55

These fares are advanced with the understanding that the men remain a stipulated period, usually three months. Towards the end of the season the understanding is that they remain until the operations are closed down, when the amount of the fares, which have previously been deducted, will be refunded.

Usually, when the men come to work, the amount of the transportation is deducted from their first or second month's pay. The above company also lost between \$30.00 and \$60.00 per month for room and board for men who remained over night and then refused to go to work.

This is not an isolated instance, for the same conditions obtain elsewhere with the larger lumber companies operating throughout northern California.

Some companies have issued printed instructions for the information and guidance of their employees. One of these reads as follows:

NOTICE.

For the benefit of all employees the following rules and regulations must be observed:

1. As the company must earn a profit in order to pay its obligations, all employees must understand that this profit comes from their labor, therefore any employee who does not earn his share of the profit for the company, by putting forth an honest day's work, is putting his own interest in jeopardy.

2. This company does not want, in its employ, men who are continually disinterested and who are complaining over trivial matters, making themselves a detriment to the company and themselves. Therefore, the superintendent is willing and ready at all times to confer with employees who may have complaints or feel dissatisfied, but they must understand that if a satisfactory adjustment to both parties can not be made, their money is ready for them at any time.

3. Any employee appearing on or about the works of this company in an intoxicated condition subjects himself to dismissal.

4. Gambling will not be permitted in the camps.

5. As a majority of the employees desire a night's rest after performing a day's work, all lights must be out in camp at 10 o'clock p. m.

6. Any employee desiring a lay-off during the operating season is expected to make proper arrangements with his foremen.

7. As no charge is made for bunks, each employee is expected to keep his sleeping quarters in a clean and sanitary condition.

8. Superintendents and foremen are expected to see that these rules are observed.

Application Cards. Prior to the adoption of the "Workmen's Compensation Act," a number of the companies had installed and were using a system of keeping personal records of their employees, on cards. These cards were of various forms and recorded such data as name, age, single, married, widower, occupation, wages, names and addresses of persons wholly dependent, names and addresses of persons partially dependent; in case of sickness, who should be notified, where born, where last employed, in what capacity, date of entering employment, post office address, and other data.

The following and similar clauses occur on these application forms:

If at any time my services become unsatisfactory to said company, said company may discharge me without notice, paying wages due me to date of discharge.

Wages per day, \$3, less \$1 per month for hospital charges.

I hereby certify that I am a first class —— and have this day accepted employment as such with the —— Lumber Company at \$—— per month.

In consideration of my employment by the company, I agree to assume the risks of the various positions in which I am engaged; to conform to all rules, including those relating to payment of wages, and also to the deduction from my wages of \$1 per month or fraction thereof, for dues for hospital and other beneficial services, also to deduction from my wages of all charges due the company.

The practical utility of these personal records of employees becomes apparent in cases of accidents where friends must be notified, or reports made to the Industrial Accident Commission, or when verdicts must be returned in inquests. The data is on file in the office for ready reference when needed. Since January 1, 1914, several of these clauses have been modified in respect to the hospital fees and some now read as follows:

You are hereby directed to deduct from my wages and pay over to the company physician, a fee of \$1 for each month to give me the protection of medical and hospital service in case of my illness (not related to or covered by the Workmen's Compensation, Insurance and Safety Act of the State of California) while in your employ. If I am in your employ less than ten days in any one month, the deduction for that month shall be ten cents a day.

Less \$1 to be deducted out of wages for first day's work in each month for cases of illness not covered by Workmen's Compensation, Insurance and Safety Act of the State of California.

Several of the companies are now paying more attention than formerly to the physical efficiency of their employees, and require applicants for certain positions to undergo a medical examination. This will result in the elimination of a certain class of employees, for instance, those who might be subject to attacks of heart failure. As one manager expressed it, "If an employee, subject to heart failure, should fall off a logging train and get run over, how would we know whether the accident was due to his physical condition or the fault of the train?"

Another phase of this increased attention to the matter of the efficiency of employees is shown in the better housing and sanitary conditions which have been installed since the survey was made in 1913.

A view of the interior of a permanent bunkhouse, showing double-deck wooden bunks, ready for occupancy.

Minors: By the Child Labor Law, as amended in 1913, no minor under the age of eighteen years shall be employed in laboring in any manufacturing, mechanical, or mercantile establishment or other place of labor, more than eight hours in one day and in no case shall the hours of labor exceed forty-eight hours in a week. The law contains certain other requirements and it is made the duty of this Bureau to enforce the provisions of this act.

Minors are employed in the lumber industry in but two departments:

(1) In the box factories, boys are frequently employed because they are quick and can do many of the operations as well or better than older men;

(2) In the logging camps, boys are used, on account of their alertness, to signal the donkey engineers when to start and when to stop their engines. This is done by means of a wire attached to the whistle of the donkey engine whence the boys get the name of "whistle punks" or "bell hops." In this occupation no arduous labor is involved. The boys usually stand or sit all day, at one place, transmitting signals when necessary. This work is of a very responsible character, involving the lives of the men operating with the logs and cables.

In both the factories and the camps, the usual schedule is ten hours per day, but in several instances the factories operate twelve and one half hours.

Altogether fifty-one boys were found to be employed in violation of the law, and of this number twenty-five were discharged, as the managers could not utilize them efficiently on a forty-eight hour schedule, while the other boys were retained by complying with the law.

The Child Labor Law has been construed, under its present wording, to permit of the employment of minors for ten hours daily, for four days and eight hours on the fifth day—the minors being laid off for the sixth day—or on any other schedule so that they do not exceed forty-eight hours of labor per week, nor "work between the hours of ten o'clock in the evening and five o'clock in the morning."

While any schedule involving over eight hours' daily work may be contrary to the spirit of the law, nevertheless, it complies with the letter thereof, if the total number of hours per week is limited to forty-eight.

It is manifest that such schedules tend to interfere with the continuous operations in the woods or the box factories, in consequence of which some of the managers have felt obliged to discontinue the services of boys under eighteen years of age.

Several of the companies had issued printed instructions to their foremen regarding the employment of minors. One company had issued this notice:

CONDITIONS OF EMPLOYMENT OF MINORS.

1. Under no condition whatever will a minor under eighteen years of age be employed by this company, except as cook house help.

Under no condition whatever will a minor under twenty-one years of age be employed by this company in a capacity where the improper or non-performance of his duty could result in injury to others. If a foreman or any one who has the right to employ labor has the least doubt in his mind as to the age of any applicant being that represented, he shall require the affidavit of the applicant and also the affidavit of the parents.

Another company had posted this notice:

CONDITIONS OF EMPLOYMENT OF MINORS.

Under no conditions whatever will a minor under sixteen years of age be employed by this company.

Under no conditions whatever will a minor under twenty-one years of age be employed by this company in a capacity where the improper or non-performance of his duty could result in injury to others.

Under no conditions whatever will a minor between the ages of sixteen and eighteen be employed in a department where he is called upon in any way to handle machinery or come in contact with machinery.

Under no conditions whatever will a minor between the ages of eighteen and twenty-one be employed in a department where the machinery is in any sense dangerous.

The statutes of California provide that no minor under the age of eighteen shall be employed more than eight hours in any one day, and that in no case shall the hours of labor exceed forty-eight hours in a week, and if for any reason a minor between the ages of sixteen and eighteen be employed in any department, this rule must be absolutely followed and notice given by signal to such minors when the eight-hour day is finished; and these hours shall be between 7 a. m. and 5:30 p. m. on each day of the week, except Sunday. Such minor must be instructed by the head of the department, and by notice posted in the department where employed, that the handling and touching of any machinery in any form by such employees is strictly prohibited.

If a foreman, or any one who has the right to employ labor, has the least question in his mind as to the age of any applicant being that represented, he shall require the affidavit of the applicant and also the affidavit of the parents, if the parents are residents of ——— County, California.

Another law-abiding company has this notice posted in its places of work:

TO FOREMEN AND TIMEKEEPERS, REGARDING THE EMPLOYMENT OF MINORS.

Complying with the new law covering the employment of minors, *foremen* are hereby instructed not to employ any minor under eighteen years of age except under the following conditions:

That he be not employed between the hours of 10 p. m. and 5 a. m. of any day, and that he only be at work *forty-eight* hours in any one week, and must receive a full week's compensation for same. To accomplish this, *foremen* are instructed to lay off all minors under eighteen years of age *at 4 p. m. on Friday and all day Saturday*, and *timekeepers* are instructed to allow said minor full time. If he should lay off of his own accord during the week, the time shall be deducted, but this does not change instructions regarding his having to lay off on Friday at 4 p. m. and all day Saturday.

No child under fifteen years of age may be employed at any time without furnishing a permit signed by the juvenile judge, or, during vacation, by his school principal.

No child under sixteen years of age may be employed during school hours without a permit signed by the principal.

Timekeepers are instructed to see that notices of time of labor and records of minors employed be kept and filed with the head office, in compliance with the law which is given below.

(Extracts from Child Labor Law are here quoted.)

A number of companies have entirely discontinued the employment of minors and will make this a rigid rule.

One company has a form of "Minor's Application," to include the name, age, date of birth, name of parents, and address of minors in its employ, and embodying this notice:

NOTICE TO EMPLOYEE.

Each employee of ——— Company is hereby warned that working about or in connection with any kind of machinery is more or less dangerous, unless care is observed at all times, and he is directed to apply in person to his foreman for information as to the proper and safe way of doing the work given him, and he is directed to obtain information as to any matter in connection therewith, which he does not understand, and is warned against the operation of machinery with which he is not familiar and the operation of which has not been explained to him, and he is specially warned that he must not engage in any work without having been instructed as to the manner of its performance.

I hereby certify that I have carefully read the foregoing instructions and that I will conform to the same.

(Minor.)

I hereby certify that the foregoing instructions have been read by me to said minor and are understood by him and me, and that he obtains employment with the ——— Company with my knowledge and consent.

(Witness.)

(Parent or Guardian.)

It is evident from the foregoing notices that the several large companies issuing them have endeavored to comply with the requirements of the child labor law, and have sought to safeguard the interests of their employees by preventing the employment of minors in any capacity where they might injure themselves or others.

The discontinuance of boys in the logging camps is not altogether without its compensations, for the sanitary conditions, the modes of living, and the associations with older men in many of these camps are not always productive of the best influences on a young man at the formative period of his life.

In substantiation of this statement, reference is made to a certain inquest held July 16, 1912, on the body of a whistle punk who was killed "By a falling tree crushing his skull. The accident resulted in his death purely through his own carelessness and the lack of ordinary judgment, on his part, to be expected of an experienced woodsman." This verdict was written by the company's physician, who was the

This view shows single steel bunks, of portable construction, a kind now in general use by the best lumber companies in California. As a result of the inspections of this Bureau, over 4,000 of these steel bunks have been installed.

foreman of the jury, and signed by the other nine members of the jury, who doubtless were also company employees, as they lived in a "company town." The mother testified that "He would have been fifteen years old had he lived until the second day of October." It was brought out at the inquest that the whistle punk had been with some companions the night before and had been drinking; that on the day of the accident, he was not as bright at his work as he should have been; that he was warned to run away from the falling tree, but instead went under it and was killed. His stepfather was employed in the same camp. It is not apparent that a normal boy of fifteen could be expected to have the judgment of an "experienced woodsman." However, the result of his associations is disclosed in the verdict rendered. Nor is it in the evidence why this alleged drunken whistle punk should have been allowed to work in a dangerous position, nor to continue, while in this condition, the performance of duties that might jeopardize the lives of fellow employees.

A manager cited the case of a Russian boy whose father wanted him to go to work. He was given a job remote from the mill, tying up bundles. He went under the mill and hung on a revolving shaft for the fun of it; his clothes got caught and he was hurled around, and before the machinery was stopped, all his clothes had been stripped from him except his socks. The father was offered a certain sum in settlement for the boy's death, refused the offer, brought suit and lost his case.

This manager also cited the case of a boy who, with his sister, was turned out of his home by his drunken father and forced to support himself. He secured a position in the camp, and when his age was found to be sixteen, he was discharged. He was supporting his sister, and pleaded with the manager to give him a place somewhere, as he could not get work elsewhere, and the manager retained him. Instances of this character are covered by the Child Labor Law, which, while permitting the employment of minors, nevertheless limits them to forty-eight hours per week.

Foreigners who live near these plants are, as a rule, anxious to have their boys go to work as young as possible. Many of the minors who were found in the box factories were immigrants, or sons of immigrants.

These boys soon learn of the limitations of the Child Labor Law, and, in order to secure employment, do not hesitate to state that they are over eighteen years of age. One Italian boy, claiming to be eighteen, produced his passport, which showed him to be but sixteen years old.

A twelve-year-old Italian boy was found employed as a driver of a horse, drawing a lumber truck from the saw mill to the lumber yard, where his father was the piling contractor.

Each year this boy had been delayed one or two months in the fall from entering school because his father required him to do this work. After the law was explained to the father, he willingly consented to allow the boy to accompany the special agent to a distant town, where the family lived, in order that he might reënter school. The father then wished to know if he might utilize his sixteen-year-old son, employed in a nearby box factory, who had previously stated that he was seventeen years and eight months old, to perform this work—thus again bearing out the statement that these boys do not hesitate to mis-state their ages.

The manager of this particular lumber company stated that the piling contractor was boarding most of his men, that drunken orgies were of frequent occurrence, and that he was glad the bright youngster was to be removed from such surroundings. This is another instance of the associations that are sometimes found in places where boys are employed.

Most of these immigrant minors, or their parents, have passports, which always show the dates and places of births of the minors mentioned in the passports.

Managers avail themselves of this fact and require the production of passports before employing those who might be under eighteen years of age.

It is a serious problem in the smaller communities as to how minors under eighteen, unable to secure factory work, may be otherwise profitably employed after school hours and during vacations.

Women. In 1913, the "Eight Hour Law for Women" was amended and it now reads, in part, as follows: "No female shall be employed in any manufacturing, mechanical or mercantile establishment, laundry, hotel, public lodging house, apartment house, hospital, place of amusement, restaurant, telegraph or telephone establishment or office, or by any express or transportation company in this state, more than eight hours during one day or more than forty-eight hours in one week." This Bureau is specifically charged with the enforcement of the various provisions of this act.

An examination of the pay rolls of the various lumber companies disclosed the fact that women are employed in but few capacities in the lumber industry. Their employment is restricted to the offices, stores, hotels, hospitals, and cook houses. Altogether, of nearly nineteen thousand employees, whose wages were investigated, only one hundred ninety were found to be females.

The eight-hour law applies to those employed in the stores, offices, hotels, and the undergraduate nurses in the hospitals.

A detailed statement of the various departments employing women is presented under the heading of *Camps—Cooks*.

In the offices, women are employed as clerks, stenographers and telephone operators; in the stores, as cashiers, clerks, and cash girls; in the hotels and camps, as cooks, and waitresses. In some cases the last-named are off duty on Sundays, in rotation with other employees.

No complaints were heard regarding their cooking. Their places were well kept and flies were conspicuous by their absence from the dining rooms and cookhouses. They endeavored to keep the premises well screened, and their places were the only ones darkened between meals to keep out the flies. Inquiry of them as to the actual amount of time they are on duty daily, disclosed the fact that they either did not know or hesitated to give the information for fear it might be disclosed to the managers and affect their positions with the various companies.

Nationalities. Statistics were obtained of the nationalities of employees of the various lumber companies visited.

In all the districts, Americans predominate as a nationality, in the number of employees, with Italians ranking next. However, all companies do not employ Italians in their logging camps. One important exception occurs, where one company employing upwards of four hundred men in its camps, retains no Italians, yet the same company utilizes them in the various operations around the sawmill.

In the northern pine district, there are no Finns employed, and not over twenty Portuguese, Russians, Indians, Mexicans or Austrians.

In the northern redwood district, on the contrary, a large number of Russians, Finns, Austrians, and Portuguese are to be found; in fact, in this district several of the larger companies have very cosmopolitan pay rolls, embracing men from all quarters of the globe. These men bring with them their former habits of living, and, where possible in the towns, live in groups.

In one "company town," the Russians occupied one quarter—the Italians another—while the Americans were housed in another district. Some of the houses furnished by the various companies in this district for the immigrant families, were equipped with bathrooms and toilets, but the former were generally found to be used for the storage of wood and vegetables, while the latter were generally found out of order, due to improper or deliberate misuse.

One manager stated that he had found it a good plan to keep nationalities mixed, presumably to prevent any collusion or labor combination among the men. No labor organization is maintained at any of the plants engaged in the production of lumber.

It is a noteworthy fact that the heavy work, such as the handling of lumber, is largely done by foreigners, principally Italians, Greeks, Swedes, Portuguese, and some Spaniards. Very few Americans stay with this occupation any length of time. One company, in the northern

Eight frame bunk cars, ten feet wide by twenty-four feet long, each car equipped with double-deck wooden bunks. These cars are shifted from place to place as the logging operations progress.

pine district, employs ten Hindus for piling lumber; another has Spanish Basques for this occupation; while another company, in the southern pine district, employs seventeen Chinese for sorting, trucking, and bundling lumber to go down their flume. These are the only instances in the state of the employment of these nationalities in the handling of lumber.

But two Japanese are employed in the capacity of cooks, while one hundred thirty-three Chinese are employed in cook houses, and two Chinese to operate camp laundries.

Mexicans are employed to some extent, in the southern pine district.

The Americans occupy the principal positions with all companies, and "white men" are generally preferred where they may be obtained. A "white man" has been well defined as a "laborer of any nationality who speaks English, eats American food, and travels alone." Foreigners are "those who speak no English, travel and work in gangs under the leadership of an interpreter and board themselves in their native fashion."

It is alleged that the Italians from the northern and southern portions of Italy do not work well together.

The Sicilians, or southerners, are stated to be quarrelsome, and at least one large company will not employ them.

An Italian interpreter examines the passport of every Italian applicant before he can be employed, and advises the company regarding the applicant.

Wages. Employees are paid by the hour, day, month, year, or on a contract basis. A wide variation exists in the practice of different companies in paying their wage-earners for the same class of work, either by the hour, day, or month. In some cases, the monthly wages include board, while, in other cases, a stipulated amount is deducted, as is mentioned hereafter.

Efficiency records were secured from the companies of the number of days which the employees had worked during the month under investigation. While other considerations may be factors in this matter, data secured at camps on the number of days worked during one month, tend to show that, in those camps where board is included with wages, the employees are more permanent than elsewhere. In such cases, the men receive continuous board, when the operations are interrupted by bad weather or other causes, and the company stands the expense.

A number of companies, however, are adopting the hour system as a logical basis for payment of wages, in order to forestall any disputes as to what amounts are due for overtime or should be deducted for lost time, and have fixed charges for board, either by the meal or by the month.

View of the only "camp" of Hindus employed in lumbering operations in California. Located on low ground where surface water from a stable near by may seep into the well shown at the right.

Contract work is confined to those operations where a definite basis may be had for the payment of wages. This includes saw filers, lumber pilers, handlers and sorters; buckers and fallers; shingle sawyers, packers, and jointers, also tie makers, wood choppers, etc.

When the handling, trucking, sorting, or piling of lumber is paid for on a contract basis, the men receive so much per thousand board feet for doing the work.

Either one man, or a crew of men, may undertake the contract. In the former case, the contractor hires his men by the day or hour; in the latter case the money is divided among the crew in proportion to the time each member of the crew has worked.

The sawing, jointing, and packing of redwood shingles is sometimes paid on the basis of a "thousand," Oregon count, or California count.

Buckers, who saw the trees into sixteen or thirty-two foot lengths, are paid by a few companies on a contract basis, the rates averaging around \$0.18 per thousand feet for 32-foot pine logs, to \$0.25 per thousand feet for 16-foot pine logs; the former lengths being cut in "donkey camps" and the latter in "wheel camps," where ten or twelve foot "Michigan wheels" are drawn by horses to haul the logs.

Fallers, who chop down the trees, may contract to be paid on the basis of a thousand feet, as scaled.

Wood choppers, on contract, are paid by the cord. Tie makers, making railroad ties, are paid by the number of ties they produce.

Except saw filers, the foregoing are sometimes paid by the amount of lumber handled, shingles made, or quantity of other work done. In other cases, they are paid by the hour, day or month. Saw filers, in the sawmills, are paid from \$5 to \$20 net, per day, by contract, the wide variation being due to the responsibility attached to the positions in various plants. They hire their own help, but receive such compensation as will net them from \$5 to \$20 per day. The band sawyers receive from \$5 to \$8 per day.

Upon the saw filers and band sawyers depend almost entirely the daily outputs of the various sawmills, and, for this reason, they are better paid than the other wage-earners.

Wage schedules of over 18,500 employees in the lumber industry were secured and have been classified separately for each district, by departments, but the work involved in determining the average wage in each occupation was too considerable to be completed in time to be included with this report.

In the absence of average wage determinations in the pine and the redwood lumbering occupations the following comparisons are offered.

This table is based on the statistics secured of the wages paid by two large and representative companies, one in Siskiyou, and the other in

Mendocino County. The first named is in the pine belt and the latter county is in the redwood belt.

Comparative Table of Wages Paid by Representative Companies Operating in the Pine and the Redwood Districts.

Departments	Occupations	Wages	
		Siskiyou	Mendocino
Sawmill -----	Day foreman -----	\$140 00	\$125 00
	Band sawyer -----	7 00	6 00
	Setter -----	3 50	62 00
	Dogger -----	2 50	52 00
	Off bearer -----	2 50	57 00
	Edgerman -----	3 50	95 00
	Tail edgerman -----	2 25	52 00
	Engineer -----	125 00	80 00
	Oiler -----	2 75	67 00
	Fireman -----	2 75	72 00
	Slipman -----	2 50	47 00
	Scaler -----	2 75	62 00
	Trimmerman -----	2 75	62 00
	Tail trimmerman -----	2 25	52 00
Camps -----	Foreman -----	135 00	87 00
	Foreman (crew) -----	4 75	112 00
	Head choppers -----	3 00	67 00
	Head fallers -----		
	Second choppers -----	3 00	62 00
	Second fallers -----		
	Engineer, donkey -----	3 75	72 00
	Spool tender -----	2 75	62 00
	Fireman -----	2 25	52 00
	Wood buck -----	2 25	
	Bucker -----	3 00	57 00
	Sawyer -----		
	Saw filer -----	110 00	72 00
	Swamper -----	2 25	57 00
	First cook:		
	White -----	*3 00	None
	Chinese -----	None	*55 00
	Hooktender -----	4 75	72 00

*With board.

The cost of board per month at the above-named logging camps are as follows: Siskiyou, \$22.50; Mendocino, \$12.00.

The Mendocino rates are paid on the basis of a month, which may contain twenty-five to twenty-seven working days.

The Bureau of Labor Statistics of the United States Department of Labor, in Bulletin No. 129, has attempted a classification of the "wages and hours of labor of employees in the lumber, mill work, and furniture industries," and chose fourteen establishments in this state for the purpose of determining the average wages paid in these industries in California.

There is such a wide variation in the wages of employees in the pine and redwood lumber operations, due partly to the differences in the board charged in these districts, that it seems wiser and more representative to secure averages in these two districts, separately, rather than of them together.

As the average wages in the various occupations, by districts, has not yet been determined, it is not practicable at the present time to make definite comparisons of the wages in the pine and redwood districts.

While the classification, by departments, as shown by the table, of the number of employees in the pine and redwood districts, indicates that there are 11,078 in the pine districts and 7,482 in the redwood districts, the latter number should be increased by approximately 1,500, as a number of lumber companies and camps had closed down when the survey was concluded at Christmas, 1913.

According to the census for 1909, the total amount paid to 25,079 persons engaged in the lumber industry in California was as follows:

Officials -----	\$ 1,343,978 00
Clerks -----	893,347 00
Wage-earners -----	15,651,040 00
<hr/>	
Total earnings -----	\$17,888,365 00

This is the largest amount paid for services in any manufacturing industry during the year 1909.

The cost of materials was -----	\$18,369,000 00
Value added by manufacture -----	26,631,276 00
<hr/>	
Total value of products -----	\$45,000,276 00

Statistics, respecting wages and other items, as furnished by various lumber companies to this Bureau in the "Annual Statistics of Manufactures," for the year 1913, are elsewhere reported.

Payment of Wages. Ordinarily, wages are paid by negotiable check on or before the fifteenth of the month succeeding that in which the wages are earned. A decided advance step in safeguarding the interests of employees in this matter, was taken by the 1911 legislature in passing a law relating to the mode of payment of wages, which reads as follows:

Section 1. No person, firm, or corporation engaged in any business or enterprise within this state shall issue, in payment of or as an evidence of indebtedness for wages due an employee, any order, check, memorandum or other acknowledgment of indebtedness, unless the same is negotiable, and is payable upon demand without discount in cash at some bank or other established place of business in the state; *provided, however*, that the provisions of this act shall not apply to counties, cities and counties, municipal corporations, quasi-municipal corporations, or school districts organized and existing under the laws of this state.

(Chapter 92, Statutes of 1911.)

It may be stated that the law is very generally observed, though one violation was found.

Tents and bunkhouses are often placed alongside of and parallel to the logging railroads. This well arranged camp is in the Northern Pine District.

Another law, similarly enacted, fixes the time when the wages must be paid. This law reads as follows:

Section 1. Whenever an employer discharges an employee, the wages earned and unpaid at the time of such discharge shall become due and payable immediately. When any such employee not having a contract for a definite period quits or resigns his employment the wages earned and unpaid at the time of such quitting or resignation shall become due and payable five days thereafter.

Section 2. All wages other than those mentioned in section 1 of this act earned by any person during any one month shall become due and payable at least once in each month and no person, firm or corporation for whom such labor has been performed, shall withhold from any such employee any wages so earned or unpaid for a longer period than fifteen days after such wages become due and payable; *provided, however*, that nothing herein shall in any way limit or interfere with the right of any such employee to accept from any such person, firm or corporation wages earned and unpaid for a shorter period than one month.

(Chapter 663, Statutes of 1911.)

Reference is made in the reports of the various districts as to the observance of this law.

In this connection, it may be stated that an employee who quits or is discharged, is generally paid with the least possible delay, in order that he may have no reason for remaining on the premises, it being assumed that such an employee will be a detriment and his presence thereafter very undesirable.

It is customary for the foreman or timekeeper to give the woodsmen who leave the employ of any company, memoranda, called "time checks," stating the amount of "time" due them. These are to be presented to the cashier in the office at the sawmill or town, as a basis on which to issue his checks. When an employee may arrive at the office, conveniently, by logging train, there is no apparent objection to this procedure, but when he must go some thirty to sixty miles, by stage, passenger train or other common carrier, to reach the office, this mode may be inconvenient or expensive and many objections have been found to this practice in such instances.

One company issues a check, "subject to offsets at the company office," sixty miles away, which apparently makes it non-negotiable for its face value until it has been accepted by the head office. However, this is the only instance of this kind that was found. The present general practice of paying employees by negotiable check prior to the fifteenth of each month is a wonderful advance over the former custom of paying whenever convenient, or by the use of duebills, payable months ahead.

Checks may be drawn in accordance with the law, payable in cash, without discount, at some bank or other established place of business in the state. Where the companies do not operate banks in conjunction with their business, the checks are usually drawn on some nearby bank, or, are sometimes drawn on the company at its main office.

A view of a sanitary camp among the pines. An automobile on trucks, used by the woods superintendent to visit the various camps, is also shown.

One company has a unique and efficient system of combining its time records with the issuance of checks for wages. The timekeeper carries a pad of checks, noting daily, for each employee, his time on the reverse side of the check. At the end of the month, the extensions are made, deductions are noted, and the net amount due an employee is entered on the reverse side, which is the face of the check. The checks are then signed and numbered; the amounts and deductions are entered, and segregated, in the cashbook, by the bookkeeper, and then the checks are ready for distribution.

Colored checks are used for the various departments, as follows:

White for General Office.

Brown for Railroad Company.

Blue for Woods and Construction Gangs.

Pink for Factory.

Green for Mills.

Yellow for Yards.

This was the only instance found of this convenient arrangement being used, which dispenses with the necessity of keeping time books and issuing memorandum slips at the end of the month, thereby saving an immense amount of clerical labor, with no loss of efficiency. Should a check become lost, a new one is issued on the record as shown by the cashier's ledger.

Many companies issue "time cards" to their employees monthly, and the timekeepers must punch these once or twice a day, depending on whether the employees are present or absent. This is an assurance to the worker that he has been credited by the timekeeper for his presence, and serves as a check to prevent errors and omissions. Disputes at the end of the month are thereby averted, as corrections can be made daily.

For instance, if a worker happens to be elsewhere when the timekeeper arrives, his ticket is not punched, but the matter is rectified at the next visit of the timekeeper.

Assignment of Wages. In addition to the above mentioned laws, the following act, having a lesser application to the employees of the lumber industry, was enacted last year:

Section 1. A new section is hereby added to the Civil Code of the State of California to be numbered nine hundred fifty-five, and to read as follows:

955. No assignment of, or order for wages or salary shall be valid unless made in writing by the person by whom the said wages or salary are earned and no assignment of, or order for, wages or salary made by a married person shall be valid unless the written consent of the husband or wife of the person making such assignment or order is attached to such assignment or order; and no assignment or order for wages or salary of a minor shall be valid unless the written consent of a parent or the guardian of such minor is attached to such order or assignment. No assignment of, or order for, wages or salary shall be valid unless at the time of the making thereof, such wages or salary have been earned, except for the neces-

sities of life and then only to the person or persons furnishing such necessities of life directly and then only for the amount needed to furnish such necessities. Any power of attorney to assign or collect wages or salary shall be revocable at any time by the maker thereof.

(Section 1, Chapter 287, Statutes of 1913.)

The foregoing was designed to prevent the assignment of wages for gambling debts, and similar purposes, and to protect the interests of the families of employees.

Many managers will not recognize orders, or assignments for wages, and hold the salary checks for the employees, unless these are attached.

Banks. Three large lumber companies operate banks in conjunction with their business, and do a regular banking business. One of these companies occasionally has meetings of its employees for the purpose of discussing matters of common interest. The officials had noticed that the bank deposits never seemed to go above a maximum of about \$40,000 and inquiry disclosed the interesting information that many employees had an idea that if the company discovered that they were able to get ahead and increase their savings accounts, there would be no chance of securing increased wages and every chance of having their wages reduced.

The manager explained to the men at one of these meetings that he was interested in helping the men to save; that those men whom he found could conserve their own property, could also conserve the company's property, and that they were the employees whom the company wish to retain and encourage. Inside of a week, over \$70,000 of additional deposits were placed in the bank,—one garbage collector depositing his hoard of \$1,700.

Postal savings banks are available in many places, but information relative to the amount of their deposits, or the amount of foreign money orders issued at various post offices, patronized largely by lumbermen, was not available.

It is known, however, that large sums are sent abroad each month, by immigrants, and some of them eventually return, with their savings, to reside in their native land.

As employees are able to secure the ordinary necessities by the use of coupon books or store credit, it not infrequently happens that they do not call for their checks, or deposit them for collection, until the season's work is completed, or until they have made their "stake." This is a term in more general use in railroad construction camps, where those men who do not remain long are referred to as "short stake artists."

Advances. The giving of money or credit to an employee, prior to the usual pay day, may be termed an advance on his wages, and the transaction is effected in one of several ways, viz:

1. *Cash.* One company was found which, upon request, gives its employees cash advances for which they receipt in a book kept for this purpose;

2. *Orders.* One company honors orders of employees, presented to its bank for portions of wages due employees prior to pay day. To show to what extent this practice may be carried, it is stated that the cash advances on salary during the month of August, 1913, for this company, amounted to \$5,304.55. The bank which honors these orders makes a nominal charge for its services in the matter; 1,880 employees of this company were paid \$118,741.38 during this month.

3. *Store credit.* Where coupon books are not used, store credit is often extended, and the store retains a carbon copy of the bills of goods sold. The amounts of these bills are deducted each month from the wages due employees. This method requires a close watching of the accounts of employees, in order to forestall the overextension of credit. One manager stated that the wages are often attached, and his company loses money thereby.

4. *Paper money.* One company issues numbered paper slips to serve the purpose of currency. These slips are $2\frac{1}{2}$ inches by 4 inches in size and are of the denominations of 5 cents, 10 cents, 50 cents, and \$1. They read as follows:

"Due the bearer, one dollar, in goods only, at the store of ————," and are countersigned by a company official. The reverse side states that "After name has been signed or printed on the other side, this coupon is good for face value in trade at ————, dealers in general merchandise."

5. *Coupon books.* These are generally $2\frac{1}{2}$ inches by 5 inches in size, having light cardboard covers, enclosing coupons varying in value from 5 cents up to \$1.25, and these books are issued in denominations of \$1, \$2, \$2.50, \$3, \$5, \$10, and \$20. All of these books have spaces on the front covers for the names of employees to be written in or signed. Various requirements, respecting their use, are noted on the covers, several of which read as follows:

"Always bring this book with you. Do not lose this, as it is the same as cash. Do not tear the coupons off. Hand to the clerk and he will detach the amount you have purchased. Employees leaving the company's service will receive cash, without discount, for the unredeemed portion of this coupon book."

"The coupons in this book are good only for merchandise and will not be replaced if lost. They are not transferable, and will not be honored if detached from this book."

"Issued to ————, and not transferable. These coupons will be received for their full face value in merchandise, if not torn out, and if presented by the person to whom issued. Do not tear them out yourself, but hand your book to the clerk who will tear out the amount of your purchase."

Portable bunkhouses, that may be loaded onto logging cars and moved elsewhere, are here shown in a pine forest.

The non-transferable clauses are inserted to prevent the use of these books for gambling or other purposes foreign to their intended use, which is to enable the owner to secure merchandise at the company stores only, without the use of money.

Only one company states, on its coupon books, that it will redeem the unused portions of coupon books to employees, though this is the general practice, nevertheless. The extent to which such books are used by employees of one company may be well illustrated by the fact that in August, 1913, this company paid 1,880 men the sum of \$118,741.38, and issued coupon books having a total value of \$5,261.00, as shown by the following table:

Book value	Towns		Camps		Totals	
	Books	Value	Books	Value	Books	Value
\$1 00	38	\$38 00	549	\$549 00	587	\$587 00
3 00	29	87 00	189	567 00	218	654 00
5 00	166	830 00	90	450 00	256	1,280 00
10 00	141	1,410 00	21	210 00	162	1,620 00
20 00	43	860 00	13	260 00	56	1,120 00
Totals ---	417	\$3,225 00	862	\$2,036 00	1,279	\$5,261 00

During this same month, the sum of \$68.05 was refunded for coupon books, returned by fifty-seven of the three hundred ninety-nine men who quit during the month. To show to what extent their use was a factor in the store business in this large company town, it may be stated that during this month of August, 1913, twenty-nine per cent of the business was on a cash basis, eight per cent on coupons, thirty-four per cent represented charges to tourists, summer residents and others, and twenty-nine per cent were charges to departments of the company.

Coupon books are issued only upon the request of employees, as a matter of accommodation, in the intervals between pay days, and not on pay days, in payment for wages.

Their use greatly facilitates the store bookkeeping, superseding the necessity for an extensive credit system.

A test case involving the use of coupon books was tried in Siskiyou County this year, and decided in favor of the company. Further mention of the use of coupon books by various companies will be made hereafter.

Hospital Fees. Prior to the effective date of the present Workmen's Compensation Act, i. e., January 1, 1914, various companies had uniformly deducted a hospital fee of one dollar per month, which insured hospital care and treatment for the employees while sick or injured. On this subject, various companies had issued printed regulations, copies of which are herein quoted.

In most cases, the companies made no accounting to employees for the hospital fees so received, and generally applied them in whole, or in part, to the hospital maintenance, and toward claims for damages.

There is no state law on this subject of hospital fees, so various companies make the arbitrary deduction whether or not they are adequately equipped to render the proposed medical attention.

A number of the companies have well-equipped hospitals, while others, not so fortunately situated, depend upon nearby doctors to furnish necessary medical aid. It is easy to see that in the case of the larger companies, employing from five hundred to fifteen hundred men per month, the hospital fees collected each month amount to a considerable sum.

There is no uniform practice as to when the dollar fee is due, that is to say, if an employee works the first and second days of the month, the fee may be deducted by some companies, while a few companies deduct at the rate of ten cents per day for the first ten days, making a total of one dollar per month. In another case, a company charges twenty-five cents per day for the first four days, or one dollar per month. Other instances will be cited hereafter.

As elsewhere mentioned, several private hospitals in and near Eureka have "hospital tickets," which they sell at the rate of one dollar per month, or ten dollars per year. These entitle the holders to medical and hospital care in case of sickness or accident.

One of these hospitals announces in its illustrated poster that:

Labor in the woods of Humboldt has worse risks than men in battle. The risk is every day and there is no escape from it. From every camp and mill, there is a procession of injured workers.

The accidents that happen are frequently serious and involve long waits for "repairs." Such "repairs" cost money at a time when a man is often broke. The care a man receives after an accident often fixes him for life.

Fortunately, there is no need for hardship in case of an accident or sickness if a man looks ahead.

A few men have worked in the woods for years without a scratch, but you will admit they are very few and you have no guarantee that you belong to the lucky number.

The foregoing is certainly not an optimistic survey of the conditions that confront woodsmen in Humboldt County, or elsewhere.

The cost of insurance under the workmen's compensation law is presumed to be charged against the profits of the companies, but in the case of those which have not reduced their hospital fees, it is probable that a portion, at least, of these fees is now applied towards liability insurance, while they are only intended to cover medical attention.

Copies of the hospital regulations of several companies are here given to show some of the limitations applying to the hospital and medical service rendered to employees:

HOSPITAL REGULATIONS.

A hospital fee of \$1 per month or fraction of a month, will be collected from all employees of ——— Lumber Company, at ———. This entitles employee in case of illness or injury contracted while in the company's employ to receive treatment at the company's hospital.

Medicine, dressings, and professional attention included.

Diet and nursing only while confined in the hospital.

Disease requiring abdominal operations and specialist's care are not covered by this fee, on account of lack of facilities, which are only obtainable in large cities.

This fee will not cover venereal diseases or conditions arising from intoxication, nor care after a patient leaves the hospital, at ———, if obliged to leave for the city or home for purposes above stated, nor professional attention to employees' families.

By order

———— LUMBER COMPANY.

NOTICE TO EMPLOYEES.

Regarding Hospital and Accident Benefits.

We have arranged with the ——— Hospital to care for all sick or injured employees at the rate of 65 cents per month per man. For this amount, Dr. ——— agrees to do all operative work, medical work, to furnish special nurse whenever necessary, to furnish all bandages, dressings and medicines, to supply private rooms to badly injured persons whenever necessary, and, in fact, to do all for an injured or sick person that a first-class hospital can do—alcoholism and venereal diseases excepted. Also to give our employees the following special reduced rates for caring for their families:

Office visits-----	\$1 50 per visit
House visits in town limits-----	2 00 per visit
Confinement cases in town-----	20 00

For members of families of employees, who wish to use the hospital, \$12.50 per week for private room, including all hospital care and service of physician (operations not included). But special rates lower than the regular rates to be given in every instance for operations.

We have made this arrangement with Dr. ——— and are starting this hospital and accident benefit scheme with a sincere desire to benefit our employees, and at the end of six months or one year, if it does not prove to be a benefit to our employees, we will discontinue it.

We propose to charge each employee, beginning March 1, 1910, ninety cents per month for hospital care and accident benefit fund.

Of the amount so received, sixty-five cents per month per man will be paid to the ——— hospital, for hospital care and special rates, as above outlined, and the balance, or twenty-five cents per month per man, will go into an accident benefit fund, this fund to be used as follows:

For purchasing artificial limbs for employees maimed in working for us, and for giving a benefit of \$5 per week to all employees injured in working for us during the period of their disablement, beginning with the second week and up to a limit of ten consecutive weeks.

This accident benefit of \$5 per week will not be given to employees who have been injured previous to this date.

Accident benefits as outlined above will be paid only upon presentation of certificates signed by Dr. ———, showing that the employee is unable to work and is entitled to receive the \$5 per week benefit.

A railroad construction camp showing proximity of stable tent to cook tent and bunk tents. A very insanitary camp where manure and flies are much in evidence.

If this accident benefit fund should prove not to be large enough to make the payments as above outlined, we will contribute to this accident fund up to the amount of \$1,000 per year, and if this accident benefit fund proves to be larger than is necessary, either the rates will be reduced or the benefits increased.

When any employee starts to work during a month, he will not be charged for hospital and accident benefit fund until the first of the next month, thus receiving part of a month hospital and accident benefit fund free, provided said employee does not leave our employ before the end of that month, for in that case they will be charged for a full month.

On the other hand, any employee leaving our employ during any month will be charged for that month in full. And in order to put our present employees on the same footing with those who may go to work later, all our present employees will receive hospital and accident benefits from the fifteenth day of February until the first of March, 1910, for which no charge will be made.

All injured and sick employees will be charged for hospital and accident benefits the same as though they were working.

Statements of this hospital and accident benefit account will be posted frequently.

(Signed). _____.

REGULATIONS OF HOSPITAL DEPARTMENT.

Contributions.

A contribution of one dollar (\$1.00) per month for hospital department will be collected by deduction on pay roll from all employees of the company. This contribution will be due on entering the company's service, and thereafter will be due for and apply to each month, or part of a month, while in the service.

Benefits.

The following benefits will be given contributors to the department, subject to the regulations hereinafter laid down, namely:

- (a) Hospital care.
- (b) Medical and surgical treatment.
- (c) Medicines and surgical dressings.

Hospital treatment.

Hospital treatment, under the care of the surgeon of the department, will be provided at the hospital at ———. Cases that require special care and nursing, or that have not proper facilities at their homes for satisfactory treatment, can be sent to the hospital.

Surgeon will determine what treatment a patient should have, where it should be given, when a patient should go to the hospital, and if he or she refuses to comply with the surgeon's instructions or to go to the hospital after being advised that he or she can be safely removed there, then the patient will not be entitled to further treatment at the expense of the department on account of that injury or sickness.

Board and nursing will not be furnished outside of the hospital.

When possible, all hospital cases should be sent to the hospital. Patients will be discharged from the hospital when, in the opinion of the surgeon in charge, they do not require further treatment there. Should patients insist upon remaining in the hospital to save expense of board and lodging, when no longer requiring hospital treatment, surgeon will promptly refer the matter, with full particulars to the company office.

Medical and surgical treatment.

Medical and surgical treatment will be given employees with the same consideration and care given patients, and by physician and surgeon in charge.

Medicines and surgical dressings.

Medicines prescribed for employees by surgeon will be furnished free of charge by the surgeon, except patent and proprietary remedies.

Who will be given benefits, and under what restrictions.

Only contributors to hospital department will be entitled to benefits, and no part of any contributions made by them shall be used for any other purpose. Benefits will be given subject to the following restrictions, to wit:

(a) Benefits will not be given for ailments due to venereal diseases, intemperance, vicious habits, injuries received in a fight or brawl, or unlawful acts.

(b) Benefits will not be given for any chronic disease or disability acquired before entering the employ of the company. Many diseases and disabilities are of a progressive character, and the fact that they have become more troublesome after entering the service will not warrant free treatment.

(c) Benefits can not be given to employees afflicted with such diseases as smallpox, yellow fever, bubonic plague, or any contagious or infectious diseases subject to federal, state, county or municipal quarantine, nor can hospital care be given in cases of diphtheria, measles, scarlet fever and mumps, owing to danger of these diseases spreading to other sick and injured employees in hospital, but residence treatment and medicines will be given in such cases.

(d) Treatment for injury or sickness will continue as long as, in the opinion of the attending surgeon, it is necessary, but will not exceed the length of service with the company, except in cases of acute illness or injury, and in no case shall it exceed one year.

(e) Employees who abuse the benefits of the department, or flagrantly or persistently violate the regulations, will be excluded from further benefits.

(f) Employees will not be entitled to benefits for disabilities incurred after contributions have ceased, or after leaving the service of the company.

(g) When employees prefer to employ their own physicians or surgeons, they will do so at their own expense, as the department will not pay for such services, nor for medicines prescribed by surgeons not in the employ of the department.

(Signed) ——— LUMBER COMPANY.

Deductions. Aside from the hospital fee, which has already been discussed, other deductions from wages are for board, rent, or lodging, coupon books, store accounts, road, county hospital, and poll taxes. These latter will be further discussed and the amounts deducted in the various districts will be discussed in detail.

Benefit Funds. Several companies had been conducting benefit associations, managed by employees who decided on the amount of compensation to be paid in cases of injury.

The benefit funds were disbursed in various ways for the relief of injured employees, or to compensate them for time lost from their work. These funds were derived from hospital fees paid by the men themselves, so that the whole proposition resolved itself into a sort of mutual benefit insurance, managed by the companies, or certain selected employees thereof. Deficits, if any, were made good by the companies. Accounts were occasionally published. Only one was found posted and it was over a year old.

A committee of three men, consisting of the mill foreman, yard foreman, and one sawyer, was acting for one company, in disbursing a hospital fund set aside by the company for relief of employees. This company charged one dollar per month for hospital fee, if the employee worked over three days.

One company reported that from September 1, 1912, to September 1, 1913, there were one hundred sixty accidents, of which two were fatal. The sum of \$3,919.50 was received in the benefit fund from employees during this period, while the company distributed \$5,281. The difference between the amount received in the benefit fund and the amount distributed was paid by the company from its profits. In this instance, the benefit fund was charged with all railroad transportation and ambulance expense. During 1911-12, the total expense to this same company was \$7,540.77.

One company had been paying, after the first week, one dollar per day, up to one hundred and twenty dollars, to injured employees, while fully incapacitated. If laid up with a minor injury, they secured board and room free at hospital while so incapacitated. In cases of death, this company paid seventy-five dollars toward funeral expenses. Another company paid full wages to injured employees while incapacitated.

It will thus be seen that an attempt has been made by various companies to recompense, in some degree, the men who were so unfortunate as to be injured, and in this particular they have anticipated the Workmen's Compensation Act.

Employees of one company, who joined the company's coöperative scheme, had fifteen and one half cents per month, of their fees, set aside for an emergency fund, so that if they should get hurt they received one dollar per day while injured. In cases of illness, it depended on the judgment of the committee as to whether they should receive any benefits.

Accidents. The total number of accidents in the camps and plants of the various lumber companies visited, as hereinafter summarized, for the year 1913, was fifty-three men killed, sixty permanently injured, and six hundred ninety-seven incapacitated for periods exceeding seven days each.

The number of accidents in this industry should be considered in connection with the number of men employed in it, and for this purpose reference is made to the subject of "*Occupations*." A segregation of the accidents, by departments, was attempted, in order to approximate the most dangerous occupation, but the data submitted in the reports of companies was insufficient, as a whole, to serve the purpose.

By the system of reporting accidents outlined under the subject of "*Occupations*," it might be practicable to eventually make such segregations and formulate conclusions, on which to revise accident insurance rates. Inasmuch as this inquiry did not embrace all the establishments in the state, devoted to "lumber and its products," these figures for the year 1913 are less than the total returns reported by the Industrial Accident Commission, which are as follows: sixty-two men killed,

This stable tent extends to the ground and only the doors are left open. Manure is removed and burned daily, and the premises are treated with a preparation of creosote and water. Flies have no chance to breed under such circumstances.

one hundred twenty-one permanently injured, and one thousand eleven injured for periods exceeding seven days each.

From these statistics, it is apparent that by far the larger number of fatal accidents occur while in the employ of companies engaged in logging operations. The relatively large number (61) of people permanently injured, and the number (314) injured for periods exceeding seven days each, exclusive of these lumbering companies, may be accounted for, possibly, by the fact that these employees were engaged in handling machinery in various other manufacturing establishments located in metropolitan cities.

During the first half of 1914, the lumber industry was responsible for two thousand two hundred fifty-three accidents resulting in temporary disability, or, ten and one half per cent of all the non-fatal accidents that occurred in California.

In this respect, this industry ranks as follows :

- (1) Construction.
- (2) Steam railroads.
- (3) Metals and machinery.
- (4) Lumber and its products.
- (5) Foodstuffs, etc.

During this latter period, this industry was also chargeable with thirty-three fatal accidents, and ninety-nine permanent injuries to employees.

A newspaper article announces that :

Analyses of mortality statistics for the last two years in California, according to occupation, show that one third of all deaths among lumbermen are from violent injuries, the percentage having been 33.1 for 1912 and 33.9 for 1911.

The risk of accidental death is next greatest for steam railroad employees, among whom the percentage of deaths from violence was 28.1 in 1912, and 27.6 in 1911, or over one fourth each year.

In other words, only two thirds of all "lumber jacks" die from normal causes, and less than three fourths of all railroad men meet "natural deaths."

Accident Prevention. It is evident from the above figures that there is much to be accomplished in preventing accidents.

One company was found which had tacked up large posters, 18½ inches by 24 inches in size, containing pictures, taken before and after an accident, illustrating the dangers incident to standing in "the bight of the line"—an expression for a contingency with which most woodsmen are familiar. This company employs a large number of immigrants of various nationalities, and these posters, conspicuously displayed, could convey their message to all, irrespective of nationality. This company evidently believes that a look is worth a thousand words, especially when those words must be in various languages. This good example deserves to be adopted elsewhere.

Several of the companies, visited this year, have shown their interest in the "Safety First" movement by selecting committees to devise ways and means of avoiding accidents. One company has appointed a committee of foremen and employees to confer regularly regarding safety devices and matters pertaining to the improvement of factory conditions. Another company has issued this bulletin:

NOTICE TO ALL EMPLOYEES.

Inasmuch as it is the desire of the company to take every reasonable precaution to safeguard its employees against injury, we will be pleased at any time to have suggestions from our employees that will tend to prevent accidents and promote safety.

Another company has posted this bulletin:

NOTICE TO EMPLOYEES.

Inasmuch as it is the desire of this company to take every reasonable precaution to safeguard its employees against injury, the company desires to form a committee to study ways and means whereby accidents may be averted.

The committee at the plant will be composed as follows:

- Chairman, (1) Superintendent.
 (2) Master mechanic or millwright.
 (3) }
 (4) } Three employees.
 (5) }

A meeting will be held on Wednesday, June 24th, at 7 p.m. in the hall, over the company store, for the purpose of selecting these three employees.

The committee will meet every two weeks at the call of the chairman. Its functions will be as follows:

First—To submit suggestions to the management, which in their estimation will improve the physical hazard in the mill work.

Second—To hold inquiry into all accidents that may occur in the operation of the mill, and to devise means to prevent similar mishaps in the future.

Third—To periodically inspect all safety devices around the plant, and to see not only that the proper use is made of them, but that they are kept in full working order.

Fourth—To study the safety and welfare of our employees.

Very truly yours,

— LUMBER COMPANY.

It is evident that by the cooperation of such trusted employees, much good can be accomplished. The appointment of committees who may handle such matters and who are receptive to suggestions from employees themselves, is a step in the right direction and should result in a material reduction in the large number of accidents chargeable to this industry.

It should not be inferred, however, that all the lumber companies have been derelict in the matter of installing safety devices, for many of them have paid particular attention to this detail. They have, at least, posted notices warning employees of danger.

Many of the accidents in the logging operations are of the most serious and unusual character, necessitating hospital attention. They include fractured limbs, crushed ribs, skull injuries and wounded eyes, all of which require expert and unusual surgical operations and treatment.

It may well be said to the credit of the larger companies that they have endeavored to anticipate such cases either by the erection and maintenance of first-class hospitals, the securing and retention of the best physicians and surgeons obtainable, the installation of "X-ray" and other hospital equipment, or have arranged with nearby hospitals to supply needed medical or surgical assistance. In addition to this, these companies avail themselves of the services of specialists when necessary. Instances of such occasions might be cited, but space does not permit.

Accident Prevention—Railroads. The various laws requiring headlights on locomotives, automatic coupler equipment, air brakes, and full crews, applicable to "common carriers," do not apply to most of the logging railroads, as, with but few exceptions, they do not happen to come under this classification.

As a result, these logging railroad employees are peculiarly subject to many dangers in the operation of logging trains. Without cabooses to ride in, they must ride on the loaded cars. They clamber over logs or over cars that may be floored, or of skeleton construction, to set brakes, couple and uncouple cars, and transmit signals, because of the lack of the conveniences which are found on common carriers. Serious accidents are of frequent occurrence.

As these logging railroads are often constructed in the most mountainous localities, grades up to six per cent are common, and higher grades are not unusual, while as many as six "switch-backs" were found necessary to make ascents.

Short curves are frequent, and it is not uncommon for logs to roll off of cars, or for cars to become derailed. The use of air brakes on the trains would enable the engineers to control the cars at all times and increase the safety of the train crews.

While most of the railroading is ordinarily completed in the daytime, it is not uncommon for trains to be delayed far into the night, and the lack of good headlights, as well as standard equipment, under such circumstances, jeopardizes the lives of the train crews. Legislation on these subjects is urgently needed.

As most logging railroads are not common carriers, they are not permitted to charge and collect fares. Therefore, several companies, to

Tents and portable bunkhouses alongside of a logging railroad, in a canyon.

relieve themselves of liability for accidents, issue tickets of the following form, which users are required to sign:

Pass the bearer, ———, at passenger's risk, as per release on reverse side of this pass.

———— LUMBER COMPANY.

Dated at —————

By—————

"This pass is issued as an accommodation and not on company business, and in consideration of such accommodation I, the undersigned, hereby release the ——— Lumber Company from all claims for damages or causes of action whatsoever, for any injuries that may be sustained through accident, whether said accident be caused through negligence or carelessness on the part of the company's servants or not.
(Signed) —————"

To illustrate the importance of the coöperation of the managers, in the prevention of accidents, as well as in other humanitarian movements, a prominent publication makes the following statement:

Twenty per cent of "Safety First" depends upon the superintendent. That is, out of every hundred points allowed on any safety work, twenty points depend upon the personality, mental attitude and point of view of the superintendent.

This is how the percentage works out, according to the United States Steel Corporation, the foremost advocate of "Safety First" in the United States:

Attitude of superintendent.....	20 per cent
Work of safety committees.....	20 per cent
Inspections by workmen.....	5 per cent
Instruction of workmen.....	15 per cent
Prizes	9 per cent
Signs	3 per cent
Lectures	3 per cent
Safeguards	17 per cent
Lighting	5 per cent
Cleanliness	3 per cent

All of which make the attitude, or state of mind, of the superintendent one of the two most important elements in "Safety First." It equals in results all the labor of safety committees, and passes by three points all that can be accomplished by safeguards.

Inquests. Examinations were made of the records of inquests on accidental deaths in the lumber industry, on file in the offices of the county clerks in fourteen of the counties visited, where lumbering operations were in progress.

No verdict was rendered, during the year preceding such inspection, holding any lumber company responsible, or blaming any company for negligence in the matter of any accidents.

This is not surprising when the personnel of the coroners' juries is taken into consideration. These juries are mainly composed of company employees, whose interests to the living are greater than those to the dead.

Sample verdicts are quoted herewith:

"By unavoidable accident, caused by log rolling over him."

"Came to his death on September 2, 1913, in this county, by accident, through carelessness on his own part."

"Came to his death on fourth day of July, 1913, in this county, by being struck on the back of the head by hook attached to cable flying through the air, due to boom on donkey engine breaking. We further find that the accident was unavoidable."

"By being hit by a sapling falling on him from the rebound on the slacking of the line on the log they were pulling on. Unavoidable accident."

"By accident, being caught between trip line and log—log rolling on him and crushing him to death while working in woods."

"By being struck by flying becket while employed as chain tender on pond for ——— Lumber Company. We further find that his death was accidental, and that no blame be attached to any one."

"By accidental drowning in the mill pond; and we further find that he was negligent in not having his shoes properly caulked."

"We, the jury, bring in a verdict of accidental death, caused by a cant being thrown from edger, and, as far as known from the evidence, the accident was unavoidable; and we further find that his death was caused by internal injuries."

"That the cause of his death was being struck on the head with a steam pipe and instantly killed. The *disconnected* turned on the steam [against orders] and the disconnected pipe swung round and hit him on the head [and killed him instantly.]"

NOTE.—Bracketed portions of verdict were interlined. No reference to them as being a portion of the verdict as originally signed by the jurors.

Verdict in inquest of woodsman who died from exposure, due to over-drinking:

"We condemn actions of officers and officials in not preventing the selling of liquor to persons under the influence of liquor, and ask that same be prohibited and stopped."

"By an [unavoidable] accident, resulting from a rock striking the railroad car in which he was riding at the time and which crushed him to death [and we find that no blame can be attached to any person or firm]."

NOTE.—The bracketed words were a part of a previously prepared verdict, for which the jurors would not stand and in consequence of which the words were struck out.

The uniform peculiar significance of these sample verdicts; the brevity and perfunctoriness of the evidence on file; the ever present possibility of the suppression of material evidence, especially when fellow employees have everything to gain and nothing to lose by their silence; all tend to discount the value of verdicts rendered under such circumstances to the extent of constituting the whole expensive performance a farce and a travesty on justice.

In only one of the verdicts above rendered did a jury have the temerity to make a recommendation to prevent a recurrence of accidents. This jury advised that a device be installed in the sawmill, to be used as a signal to stop the machinery when necessary.

It is evident that where juries must be impaneled, in remote districts, the members of the jury are necessarily drawn from citizens who are accessible, and in the case of logging camps it follows that they are often company employees. Under the circumstances, they are apt to be deterred in their findings from placing any responsibility on their employers, and, as above noted, only too often fix the responsibility for the accident on the unfortunate employee.

Most of the verdicts here noted were rendered on foreigners, who, through unfamiliarity with the English language, or logging conditions, were peculiarly subject to the hazards of the lumber industry. It is due, in a large measure, to the presence of these untrained immigrants in lumber operations that this industry ranks so high in the number of accidents—fatal and otherwise.

Medical Cabinets. Of the humanitarian legislation accomplished by the last legislature, the medical cabinet law deserves especial notice. This act reads in part as follows:

Section 1. Every person, firm or corporation operating a factory, or shop, or conducting any business in which power machinery is used for any manufacturing purpose, except for elevators or for heating or hoisting apparatus, where five or more persons are employed, shall at all times keep and maintain, in some accessible place upon the premises upon which such factory, shop or business is located, free of expense to the employees, a medical or surgical chest which shall contain an adequate assortment of absorbent lint, absorbent cotton, sterilized gauze, plain and medicated, adhesive plaster, cotton and gauze bandages, also one tourniquet, one pair scissors, one pair tweezers, one jar carbolized petrolatum, one bottle antiseptic solution, and one first aid manual, all of which shall cost not less than six dollars, and to be used in the treatment of persons injured or taken ill upon the premises.

(Chapter 278, Statutes 1913.)

In compliance with this act, many companies had installed, prior to the inspections, medical chests in their various plants and logging camps for emergency use. The practical utility of these cabinets, especially in localities remote from doctors and hospitals, is easily apparent. Many cases of septic poisoning, due to improper bandaging, will be obviated by the use of the aforesaid equipment, and these appliances will also minimize the results of many accidents.

Detailed reports respecting their installation are elsewhere given. Where installed, the medical cabinets in the camps were generally in the stores, or the cabins of the foremen or timekeepers, because these men were trusted with their proper handling.

As a rule, the woodsmen are employed at work at distances of a quarter of a mile up to one or two miles from camp. The donkey engines near which the accidents are most liable to occur, may be anywhere within this radius. It is manifest that the cabinets might well be installed wherever a donkey engine is used, in order to save valuable time should an emergency arise.

Many of the medical cabinets were not equipped with first aid manuals. Where these are not otherwise readily obtainable, a copy of "First Aid Instructions for Miners" may be secured by writing to the Bureau of Mines, Department of the Interior, Washington, D. C., for "Miners Circular, No. 8."

Ambulances. It is a noticeable and commendable sign of the times that companies, of their own initiative, have supplied, equipped and set apart for immediate use, reconstructed automobiles, on railroad

An "undercut" in an immense redwood tree.

Fallers sawing into a stately sugar-pine tree.

trucks, or gasoline motor speeders, with portable cots, to be used on their logging railroads in emergencies. At least two instances of this kind were found, in the Southern Pine District, where these cars were kept in reserve for this use. As logging camps are located anywhere from one to thirty miles from a hospital, the urgent need in cases of accident, for such means of transportation, is evident.

Several companies have their railroad men instructed in case of emergency to detail an engine to bring the injured employee directly to the hospital. The failure of a certain company to anticipate such a contingency was responsible in a very large degree for the loss of life of one logging employee, as disclosed by a verdict rendered September 9, 1913. The conclusion of the coroner's jury was that the toggle-knocker came to his death "by accident, owing to his own carelessness, at Camp ——— of ——— Lumber Company, by having had his right leg crushed between ankle and knee, between two logs."

The evidence went to show that the accident occurred at 4:30 p. m. The injured man was conveyed to the nearest railroad point, where he was held until the evening passenger train arrived. He was then taken by train some thirty miles to the hospital, arriving there about 9 p. m. The doctor's testimony was that in this long interval, the victim had lost a great deal of blood, in consequence of which he did not survive.

Arrangements might have been perfected previously, or permission secured in this emergency, whereby the company could have brought the man directly to town on its own engine. This lumber company is closely associated with the railroad system, and it is to be hoped that a recurrence of this character will be prevented. The logging superintendent of this company was the foreman of the coroner's jury, which rendered the foregoing verdict.

Sanitary Safeguards. Only one company was found which used sanitary drinking fountains, thus obviating the use of the very unsanitary drinking cups in general use. This method, of course, has its limitations, for it is only adaptable where good drinking water may be piped under pressure to the place where used. The simplicity and superiority of sanitary drinking fountains over other methods, needs only to be seen to be appreciated.

Common roller towels are in general use in many places where common washbasins are used. The use of the sanitary paper towels, as required in certain cities of this state, is not followed by any lumber company. The grave danger of infection from both the use of the common drinking cup and the roller towel are well known, and their use on trains, as well as in certain cities, has been prohibited.

Public Health Bulletin, No. 57, issued by the Surgeon General, Public Health Service, Washington, D. C., gives a resume of the laws relating to, and the dangers incident to the use of common drinking cups and roller towels.

Sickness. The most common cases of sickness reported are the so-called "camp disorders." These are due to eating contaminated food, or food improperly cooked, or exposed to flies, or the injudicious use of fresh fruit.

During the inspection trip, the following contagious cases were noted: one case of smallpox was sent to a hospital, and the bunkhouse fumigated; two cases of typhoid were being treated in a hospital; twelve typhoid cases were being treated in another hospital, all of them having originated, so far as known in a "company town." The manager stated that, subsequent to the epidemic, he had expended over \$1,000 in cleaning up the town. Yet the privies in the lumber yard were found unroofed and in a very unsanitary condition. Comment is unnecessary.

From a camp of another large company, four cases of typhoid had been sent to the hospital, in September, 1913, just prior to the inspection. The logging superintendent stated that this camp had always produced more or less sickness, and he was uncertain whether it should be ascribed to the drinking water or to the presence of a typhoid "carrier" in the camp.

The possibility of a typhoid or other contagious epidemic is ever present. With the likelihood of a typhoid "carrier" in any camp, it is essential that preventative measures, looking to proper screening and the installation of sanitary conditions, be employed.

The common fly is frequently a carrier of typhoid by reason of its filthy habits. Germs cling to its feet and are deposited on food or in milk. Typhoid is due to a microscopic germ, which multiplies in the bowels and is found in great numbers in the discharges of the patient. Internally, it generates poisons and causes lesions or injuries, which in many cases end fatally. Wells, springs, ponds, streams, and reservoirs often have become infected, directly or indirectly, from excreta containing typhoid bacilli; and epidemics of the deadly fever have been traced to such sources.

The locating of human typhoid "carriers" in a given camp is difficult. For instance, a well known case is on record of a certain lumber steamer plying between Eureka and San Francisco, to which had been traced twenty-seven cases of typhoid, among sailors and passengers, during a period of three and one half years. The cause of infection was finally traced to a common drinking cup used by the various members of the crew, one of whom had been subject to typhoid fever

and was later discharged as cured. To all appearances, he was entirely well and able to do his usual work, but the germs continued in his system during all this time, and afterwards, thus endangering others.

Had this man been the ship's cook, it might have been easier to locate the source of the trouble, and, for this reason, persons engaged in the cooking or handling of food supplies should be subject to special inquiry as to their exposure to or contamination by this disease.

Further information regarding this and other interesting cases of typhoid "carriers" may be secured by writing to the State Hygienic Laboratory, Berkeley, Cal., for a free copy of "A Typhoid Carrier on Shipboard."

Literature on the relationship of flies to diseases, particularly typhoid fever, may be secured by writing for any of the following list of publications:

"The House Fly in Its Relation to Public Health," Bulletin 215, issued by the Agricultural Experiment Station, College of Agriculture, Berkeley, Cal.

"House Flies," Farmers' Bulletin 459, and "How to Prevent Typhoid Fever," Farmers' Bulletin 478, issued by the Division of Publications, Department of Agriculture, Washington, D. C.

"Flies as Carriers of *Lambli*a Spores," Reprint No. 154, P. H. R., issued by the Surgeon General, U. S. Public Health Service, Washington, D. C.

"American Journal of Public Health," for March, 1914, 30 cents. The American Public Health Association, 755 Boylston street, Boston, Massachusetts.

Fumigation. Several companies use steam from donkey engines or locomotives, once or oftener during the year, to disinfect the bunkhouses or to kill or dislodge the vermin, which often are housed there.

Following cases of contagion, sanitary precautions in the way of fumigation are not always employed, as the means are not at hand, or methods are not well understood, for performing this important duty. Formaldehyde gas in the presence of water vapor is strongly advised for fumigation following most cases of sickness. Fumigation by sulphur is less efficient and is injurious to fabrics and metals. A convenient and inexpensive method of fumigating with formaldehyde is described as follows:

Prepare the room by closing all cracks and crevices by plugging or by pasting paper over them. Open bureau drawers and closets, and spread fabrics so that the formaldehyde will have access to all surfaces. Cover a space in the center of the floor with newspapers to prevent damage from splashing. Place a clean, ten quart galvanized iron pail on the floor and put into it eight ounces of dry potassium permanganate crystals. Pour one pint of formalin into the pail, retire quickly, and seal the door. One container and the quantities of chemicals stated are sufficient for fumigation of 1,000 cubic feet of air space. The heat generated by the chemical

The fall of a monarch of the forest.

action between the potassium permanganate and the formaldehyde will evaporate the solution, throwing formaldehyde and water vapor into the room. Risk of fire from too rapid oxidation may be avoided by the use of clean pails. After twelve hours the room should be opened and aired, and, if the remaining formaldehyde gas is oppressive, a little ammonia should be sprayed in the air. The room should then be thoroughly cleaned.

When properly performed, the foregoing procedure will effectively destroy bacteria.

Fumigation for bedbugs and other vermin is best effected by hydrocyanic acid gas, but as this is too dangerous for common use, the best informed entomologist in California advises that four or five pounds of sulphur be used for each one thousand feet of air space in the room.

All metals, especially brass and iron, must be removed or fully protected. All cracks should be closed up, and the room kept closed for from three to five hours.

Space does not permit a more complete discussion of methods and remedies to be used for vermin, but before undertaking this important kind of work, readers are advised to send for one of the following free publications, and to understand fully the methods they advise:

Bulletin No. 253, Ohio Agricultural Experiment Station, Wooster, Ohio.

Bulletin No. 4, New Series, revised edition; Circular No. 47, Second Series; Bulletin No. 90, and Circular No. 163, Bureau of Entomology, issued by the Division of Publications, U. S. Department of Agriculture, Washington, D. C.

Farmers' Bulletins, No. 155 and No. 345, issued by the Division of Publications, U. S. Department of Agriculture, Washington, D. C.

Occupational Diseases. An experienced physician for a large lumber company stated that the life of lumber handlers, and pilers, is about seven years, as the work is very heavy and soon breaks them down. This record is comparable to the underground operations of miners, where the dust and working conditions often bring on "miner's consumption" in about the same period of time.

The general use of saw-filing machines, and the various forms of wood-working machinery, without blowers, particularly in the redwood district, is a violation of the Sanitation and Ventilation Act. The constant inhalation of dust by employees tends to lower their physical resistance and renders them peculiarly subject to illness.

Occupations. Employees in the lumber industry have been tentatively segregated into forty-four distinct classes or groups, as per table herewith presented. This was done for the purpose of securing a basis for averaging their wages in the various occupations. This segregation, however, omits operators in several departments, as those in a match factory, etc., when but one establishment is known to exist in the state.

The lumber industry in California utilizes employees of more varied capabilities than any other industry.

Segregation, by Departments, of Employees in the Lumber Industry.

Hours of Labor. Camps, and lumber plants, operate on the basis of ten hours a day, yet, as will be noted hereafter, a number of sawmills and box factories operate "time and a quarter," that is, twelve and one half hours per day.

Offices are generally open from eight to ten hours per day. The store employees have longer hours than any other department, because the stores are open before the mill and camp employees go to work, and remain open until long after these men go off duty. It would seem as if this was not wholly justifiable. The stores might be closed during a portion of the day to offset the night work required, and the latter limited to one or two evenings, for a short time, each week.

Railroad men are subject to long hours, some starting out as early as 5:30 to 6:00 a. m. and remaining on duty as late as 6:00 to 8:00 p. m. When accidents occur they may be detained on duty far into the night.

Night watchmen, firemen and engineers also have long hours, usually from 6:00 p. m. to 6:00 a. m. for seven days per week, making a total of eighty-four hours weekly. Recognizing the trend of public opinion and legislation toward shorter working hours, some companies are reducing their hours of work in offices and stores to the minimum required for the work to be performed.

The census returns from California, in 1909, reported the total number of hours per week of the 22,935 wage-earners in the lumber industry as follows:

Forty-eight hours and under -----	3,859
Between 48 and 54 -----	68
Fifty-four hours -----	2,709
Between 54 and 60 -----	228
Sixty hours -----	14,732
Between 60 and 72 -----	1,324
Seventy-two hours -----	15

In making this classification, the average number of wage-earners employed during the year is used, and the number employed in each establishment is classified as a total, according to the hours prevailing in that department, even though a few employees work a greater or less number of hours.

From this it is evident that night watchmen, firemen, engineers and others employed twelve hours or over, being few in number, are entirely disregarded, for these are on duty up to eighty-four hours per week, but are not noted above.

It is a matter of general surprise that the following law, applicable to the lumber industry, is on the statute books:

Section 1. Every person, corporation, copartnership, or company operating a sawmill, shakemill, shinglemill, or logging camp, in the State of California, shall allow to his or its employees, workmen, and laborers a period of not less than one hour at noon for the midday meal.

(Civil Code, Appendix, page 827: Stats. 1901, p. 75.)

Buckers sawing a tree into sixteen or thirty-two foot lengths, using machine operated with compressed air.

While this law has been in existence for thirteen years, it is not known that it has ever been enforced.

One company operating its sawmill twelve and a half hours per day was allowing its employees forty-five minutes at noon, while several companies in the vicinity of Eureka were allowing their employees thirty or forty-five minutes at noon for the midday meal. The latter companies claimed that they did so to please their employees, who wished to get home earlier in the evening.

Aside from the foregoing act, the "Child Labor Law," the "Weekly Day of Rest Law," and the "Eight Hour Law for Women" comprehend the only time limitations for employees in the lumber industry.

The so-called "Sixteen Hour Law for Railroad Employees," as amended in 1913, is applicable only to those employed on common carriers, and would apply therefore to only a few lumber companies which operate logging railroads coming under this classification.

Weekly Day of Rest. Certain employees of the lumber industry are engaged in occupations which are more or less continuous in their nature. Instances are: night watchmen, firemen and engineers, kitchen and dining-room help, and telephone operators. In many instances railroad employees have emergency work which must be done on Sunday.

It is often necessary, also, that repairs to locomotive engines and sawmills be made on Sunday in order not to interfere with the usual week day operations.

So far as known the following law has never been observed in the lumber industry:

Section 1. Every person employed in any occupation of labor shall be entitled to one day's rest therefrom in seven, and it shall be unlawful for any employer of labor to cause his employees, or any of them, to work more than six days in seven; *provided, however*, that the provisions of this section shall not apply to any case of emergency.

Section 2. For the purposes of this act, the term day's rest shall mean and apply to all cases, whether the employee is engaged by the day, week, month, or year, and whether the work performed is done in the day or night time.

(General Laws, Act No. 2137, Statutes 1893, page 54.)

Labor Saving Processes. No special inquiry was made in relation to this subject, for with the many departments into which this industry is divided, each having numerous operations, such a task would be too lengthy and difficult to accomplish.

A noteworthy instance of the displacement of hand labor by machinery is the installation, at a certain sawmill, of a crane system for the expeditious trucking, piling, loading, and handling of lumber.

This system is reputed to have cost \$50,000 and to have paid for itself, through the economies effected, within eighteen months. The company figured that it displaced twenty-seven men who otherwise would need to be constantly recruited, housed, boarded, and paid, and who would also be liable to accidents at any time.

PART II—CAMPS.

Names. The logging camps are named for various reasons: (1) After the streams, as Nanning Creek, Jacoby Creek; (2) Topographically, as Tip Top; (3) In a consecutive series, as Camp 20, Camp 21, etc.

Seasons. The camps open generally in April or May, and continue as late as the weather or business conditions warrant. In 1913, the camps in the pine district continued operations into November, while in the redwood districts, some camps remained open, due to favorable weather, until Christmas. This year (1914), some of the camps closed in September, on account of the business depression, and the small foreign demand, due to the European war.

Supervision. The camps are in charge of a logging superintendent, a foreman, or a subforeman, called a "camp boss." The better camps have flunkies, jocularly called "bull cooks," or "crumb bosses," to sweep out the cabins, chop the wood for the cooks, and to dispose of the garbage.

Location. In the pine districts, the camps may be shifted as often as four times in one season, while in the redwood belt, the camps are more permanent, some remaining in one place upwards of four years.

Care is exercised in the selection of good camp sites, and the proper distribution of the various bunkhouses and camp cookhouses. The foreman's office is at the store or commissary, which is generally placed near the dining-room.

Upon the topography of the locality depends whether the bunkhouses will be placed in rows parallel to the railroad tracks, or, widely distributed, as is often done where the land is fairly level. The latter plan has the advantage of increased safety in the event of a fire originating in any bunkhouse.

When the houses are placed in rows, a water pipe is often laid past them with faucet connections for each house.

Each house is supplied with washbasins, which plan is preferable to having a common washing place.

Camp Sanitation. Much literature of an advisory nature has been issued on the proper location, arrangement and management of labor camps. A few references to this subject are here given:

"Sanitation of Camps," Monthly Bulletin, March, 1912, State Board of Health, Olympia, Washington.

"Labor Camps in Wisconsin," Industrial Commission of Wisconsin, Madison, Wisconsin.

Page 48, Third Annual Report, Bureau of Industries and Immigration, State of New York. Albany, New York.

Housing. The bunkhouses are arranged, as a rule, alongside of and parallel to the railroad tracks. Where bunk cars are used, they are placed on side tracks. Bunkhouses are built of unplanned and unpainted lumber. But one company in the state has built its houses of planed lumber and painted them. Where wooden bunks were used, the bunkhouses were often infested with bedbugs. Tents are used by a few companies, as will be noted hereafter.

In the older logging camps which were visited, the permanent buildings were often equipped with double-deck wooden bunks. It is a favorable sign of these progressive times that not only such buildings, but also the use of double-deck bunks of any description, are going out of use and are being supplanted by movable bunkhouses, equipped with single steel bunks. Generally, three single steel bunks are placed in one house, with a stove in the fourth corner.

It is notorious that when a man leaves a camp, his comrades in the same bunkhouse generally demolish the wooden bunk which he has occupied and burn it up in the stove, in order to prevent a stranger from again using it. From this it will be seen that men do not like to be herded together in large numbers, preferring a congenial group of two or three companions.

In one camp in the Northern Redwood District this notice was posted on the doors: "Do not destroy the bunks in this cabin." The managers estimate the value of a wooden bunk at about \$1.00 each, and the expense incident to the replacement of wooden bunks each season may become a large item in the camp accounts.

Double bunks, constructed either of wood or steel, to accommodate two persons in one bed, are not in use at any place that was inspected.

"Double-deck bunks" either steel or wooden, is a term applied to a structure having an upper and a lower berth. The use of double-deck steel bunks is very limited and is mostly confined to bunk cars.

The two construction camps that were inspected, use double-deck wooden bunks. These are camps where the men are engaged in quarrying, or in power dam construction, as distinguished from railroad camps for railroad construction.

Single wooden bunks are generally from 30 inches to 36 inches wide, and 78 inches to 84 inches long. They are enclosed on four sides by boards 6 inches to 10 inches high, and are boarded across the bottom, the whole structure being supported by wooden legs at each corner. Straw is placed in this box-like arrangement, and the bedding or blankets are laid on top of the straw.

The continued use by certain companies of these primitive, temporary wooden nests—vermin incubators—to stable human beings, who are forced by necessity to occupy them, clearly reflects the attitude of these

A "donkey crew" at work hauling a train of logs down a chute.

employers toward the humanitarian movement initiated by this Bureau, strengthened by the disclosures of the Wheatland riot of August 3, 1913, and now supported by public opinion.

It is to be regretted that legal limitations prevent the publication of a roll of honor comprising the names of those companies that, appreciating humanitarian considerations and the physical efficiency of their employees, have arranged for a permanent installation of steel bunks, shower baths, and sanitary conditions.

This Bureau appreciates the work which these companies have done toward improving living conditions, and commends their example to others.

As heretofore noted, the camp sanitation law requires that:

The bunks or beds shall be made of iron, canvas or other sanitary material and shall be so constructed as to afford reasonable comfort to the persons occupying such bunks or beds.

Whatever may be said of wood as a sanitary material, this Bureau has taken the attitude that wooden bunks do not "afford reasonable comfort" to the persons occupying them at any time, and especially when infested with vermin.

Acting on this assumption, the proposition was put up to the managers, during the enforcement of the law in 1913, that in addition to the direct financial loss, occasioned by the moving or the destruction of wooden bunks, and the supplying of straw, with the consequent fire hazard, there was an indirect financial loss, due to the lower physical efficiency of the men employed, caused by the fact that they did not get that restful sleep on hard bunks that they would secure on iron bunks constructed with springs. In other words, if the employees secured better rest, they would be able to work better, and the additional expense for steel bunks would be more than compensated for in a larger output, by better contented men.

In this connection it is a pleasure to state that following the inspections made during the year 1913, and the conferences with the managers, twenty-eight lumber companies installed 3,649 single steel bunks, and 159 double-deck steel bunks. Elsewhere in the state, following the passage of this law, eleven lumber companies, of their own initiative, installed 966 single steel bunks.

Up to September 22, 1914, sixty-four other companies in the state had installed 1,131 single and 451 double-deck steel bunks.

This makes a total of 5,745 single and 610 double-deck steel bunks now installed, following the passage of this law, in addition to upwards of 1,000 single steel bunks previously in use.

The far-reaching influence of this step taken by the various managers can hardly be estimated. It means not only increased comfort for thousands of men, but increased efficiency, figuring into hundreds and thousands of dollars, for the various companies which have taken this advanced step in the matter of camp sanitation.

The result is none the less noteworthy, because of the lack of newspaper attention or notoriety, and the entire absence of friction and lawsuits.

A thorough canvass of the situation, combined with conferences with the various managers, has accomplished much already, but there still remain some companies that have not yet made any improvements in the housing and living condition of their employees.

Club houses. But one company in the state has placed a club house in its logging camp, and this will be described more particularly under the title of "Southern Pine District."

The practical utility of such a place for reading, writing, bathing, and the exercise of good fellowship, is too evident to need any recommendation.

Several of these houses are maintained in various "company towns" by employees, through the formation of clubs, and the coöperation of the companies. They are furnished with the various facilities of a club, and serve to attract and retain the better class of employees.

Bathhouses. The bathhouses that have been installed will be described later. Their practical utility is too apparent to warrant discussion. It is strange that where water is so free and abundant, and fuel is so cheap, as in the camps, so many companies were found which had not installed bathhouses.

At the sawmills, there is every reason for their installation, as the first cost is very small and the cost of maintenance is nothing.

No reinspections have been made, hence it is not known how many companies operating in northern California, since the survey was made in the autumn of 1913, have installed bathhouses. It is probable that most of the companies which installed steel bunks have likewise made some provision for free baths.

Several companies have placed bathtub facilities in charge of a local barber. These barbers uniformly charge twenty-five cents per bath. This places a premium on cleanliness, to the detriment of the employees, and ultimately of the companies, as the majority of the men are adverse to paying any fees for the use of water. To meet this objection, a nominal charge for soap and towels might be imposed.

Laundry. Two companies in the state have laundrymen retained to wash the clothing of their men each week. For this service, a charge is made as is noted elsewhere. In all the camps of the other companies, the absence of laundry facilities for the men was very noticeable. This laundry work, when performed by the men, is usually left until Sunday, and, under the usual conditions obtaining, is more apt to be half done, or left undone, than otherwise.

Water. Water is usually piped direct from springs so as to insure an absolutely uncontaminated supply. Cases will be cited where the water is supplied from springs, wells, flumes, and open ditches. As a rule, the water is of superior quality and abundant in quantity.

Liquor. None of the companies sell liquor in their logging camps, and a number of them strictly forbid its use on the premises. The attitude of the managers is elsewhere mentioned.

Dining-rooms and Cookhouses. These are generally combined under one roof. The structure may be:

(1) A permanent frame building, erected for the purpose and left standing, taken apart, or burned down, when the camp is moved elsewhere.

(2) A portable frame building, made in sections, which are taken down and moved to new locations as required.

(3) A box car, constructed and arranged for use in connection with bunk cars. In such cases, the cooking and commissary work is done in one car, while an adjacent car is used for a dining-room.

(4) A tent with, but generally without, floors. This latter is the most difficult to effectively screen, and none was found so protected. Of all the structures in a camp, it is most important that the dining-rooms and cookhouses at least should be effectively screened from flies. Fly traps, fly paper, and other devices should be used to reduce the number of flies. One method is described as follows:

A cheap and easy way to kill flies is to put about eight teaspoonfuls of formalin in a quart of water; add a little sugar. Put it in a fruit jar; put a plate over the top; hold the plate with one hand and the jar with the other and turn it over so that the plate is underneath. If the turning is quick and skillful, nothing will be spilt. If the mouth of the jar has a little nick in it, a little will run out into the plate. A little is enough. If there is no nick, a nail or a splinter slipped under the edge of the jar and left there will allow enough of the liquid to escape.

The best place for the jar is on a porch or somewhere near the house where the flies are wont to assemble. Their potations seem to make them drunk only at first, and they lie about in a helpless condition. Later they die and it is to be hoped they have not had an opportunity to propagate their kind.

The desirability of this method is based largely on the fact that the jar will take care of itself for a month. A frequent sweeping up of the dead flies is some annoyance and some work of course, but is as little work as can be hoped for in any method of fly killing. Formalin and formaldehyde are the same.

"Michigan wheels," ten to twelve feet in diameter, are used occasionally, in the pine belt, to convey logs to the railroad tracks.

A "Jammer engine" loading logs onto the logging railroad cars.

Cooks. At the time of the survey, the various companies visited employed "white" men, women, Chinese, and Japanese, in their hotels and cookhouses, as per table herewith presented:

- D. Southern Redwood District.

Chinese are not allowed in Humboldt County—by an unwritten law of the inhabitants of this county—otherwise their number might be greater. Their cooking and service was, on the whole, decidedly inferior to that of the other cooks. It was not an unusual thing to hear complaints regarding them from the men. It is alleged that they will serve up any old kind of food given them for the purpose; that their cooking is unappetizing, and that they also lack variety in their menus. Relative to this latter complaint, it is impossible to say whether they or the companies are responsible. They certainly have not the initiative of the "white" men and women, nor do they generally

A primitive method of hauling logs to the sawmill, occasionally used in the pine belt. Note the yoke of oxen, also the solid wooden wheels of the wagon.

A traction engine being used to haul to the sawmill. This method is only used in the pine belt.

appreciate the importance of thorough screening, nor the proper cooking and serving of food.

Many employers would prefer to have "white" cooks, but these are not always reliable. It is largely for this reason that Chinese are preferred, as they seldom get drunk or leave the service without due notice. On the contrary, they remain until a successor can be secured, and often secure their own successors and instruct them in the duties of the positions. One Chinese cook was found who had been with the same company for over twelve years.

Some companies employ stewards to see that a proper and sufficient variety of food is supplied to the various camps, and that the cooking and service is what it ought to be. Undoubtedly these stewards more than earn their salaries in the savings effected in the ordering and use of supplies; also in the better satisfaction and increased efficiency of the well fed employees. The relation of wholesome food, well cooked and served, to the physical efficiency of employees, is too often overlooked.

Occasionally, where foreigners are employed, they do their own cooking. This is particularly true of Greeks, Italians, Hindus and Chinese.

Two companies furnished "oleo," one of them having a notice to this effect posted in the dining-room.

Board. As will be noted hereafter, the cost of board varies in different parts of the state. One company turns its boarding privileges over to a mercantile company to operate. Another company handled the camp commissary through a firm of contractors, but the service was unsatisfactory and was discontinued in 1913. With these exceptions, all the companies own and operate their own camp dining facilities.

Provisions are dispatched once a week or oftener to the various camps, and the families secure their supplies at the same time. The proper handling of meat is one of the serious problems encountered, in this connection, as too often the meat is exposed to the action of flies, dirt and heat, while in transit, and becomes tainted before being used.

Without any exception, the companies have endeavored to supply screened meat houses, which, in most cases, fairly answer the purpose. Ice is not obtainable in the camps, in consequence of which the meat must be kept in the coolest place available.

Granite or porcelain ware, as a rule, is used, with metal or case knives and forks. Only one company uses silverware with its crockery dishes, on tables covered with white oilcloth, in its logging camps. This company only employs, and desires to please and retain, "white men," instead of the usual cosmopolitan crowd of woodsmen, in its logging camps.

A facetious writer for a San Francisco daily paper last year referred to boarding conditions in the lumber camps of Humboldt County as follows:

One of the novel sights is the cookhouse in operation, where from seven to eight hundred men, as in the cases of some of the larger company towns, eat at one time.

Long before the time set, the crowds of hungry, sweaty toilers gather outside the food corral, ready to stampede when the big chef, in his high, white hat appears at the door, and beats a barbarous tattoo on a great steel triangle.

Fletcherizing is unknown here. Seven hundred men are seated in a long barren room, at tables equally as long, and covered with oil cloth; never a word spoken, except now and then the mumbled order to pass something beyond the reach of the desiring one: only the roar and clatter of table tools, the thud of falling dishes and the scampering of table waiters.

It is a wonderful sight for the tenderfoot, if not appetizing.

At best it is a transitory scene, the lumberjack of Humboldt taking pride in the brevity with which he can consume a man's-sized meal. This record mastication is referred to both in camp and town as the "Humboldt Rush."

The food is far from being appetizing to the epicurean, either in itself or the way it is served. It is coarse and heavy; the men are unwashed, and exude the odor of hard toil.

But twelve hours on the new job will give the beginner an appetite that will bid fair for honors in the rush.

Long hours of wrestling with "sinkers" in the mill pond and "bucking" lumber on the dock will give the new recruit an animal appetite that will develop an astonishing reach at the table.

The cookhouses in the camps, like those in the company towns, are the common dining-rooms of the camps.

Here everything is served a la tub, with little time lost on cleanliness, for in a lumber camp godliness is always below par.

When the long benches are filled with great throngs of hungry men, there is that intense atmosphere of the burning desire to devour, that is most often associated with a horde of wild animals.

There is the clatter of knives and forks, the rattle of reinforced china, and the reach and grab, all of which combine to create a roar far from reassuring to the tenderfoot.

Garbage. Garbage cans and barrels are boarding places for flies. Covers are often supplied for these receptacles, but they either get damaged, or lost, in consequence of which the containers remain open to attract the flies.

At one place where several barrels were placed in a row, on sleds, a board cover was hinged to a building, ready to drop simultaneously over all the barrels when in place. This afforded a ready and convenient method of keeping them covered.

For cleansing these containers, weak solutions of certain coal-tar products are advised. Such solutions are at once disinfectants and deodorizers. They are inexpensive, and will kill not only the flies and mosquitoes, but their eggs.

A solution of chloride of lime, one teaspoonful to a pint of water, or a strong solution of water and washing soda, make good cleansers. A discarded whisk broom should be kept for cleaning out the garbage can, for the hands need not come into contact with the dirty water.

Cut grass or a layer of paper is sometimes placed in the bottom of the can to prevent the garbage from sticking to the bottom.

Hogs. These are to be found in nearly all camps. Sometimes they are penned up, though sometimes they are allowed to run at large.

The hogpens are often adjacent to, or within a hundred feet of, the dining-rooms, and, in such cases, the stench may become unbearable. Hogpens should be placed at the same end of the camp as are the stables, and, if possible, at a much greater distance.

Stables. The location of stables and hogpens too close to various camps is a serious menace to the health of the employees living there. These are breeding places for flies, and the connection between flies and disease is now too well established to need discussion.

Flies carry the germs of typhoid, tuberculosis, diarrhoea and almost every other infectious ill that humanity is heir to. "Fly time" is a term applied to August and September, because during these months the flies are so numerous as to have things all their own way. The killing time should be in May, June, and July, the earlier the better, before the pests become too numerous to exterminate.

The few flies that live in the winter begin in the spring to lay their eggs, depositing them in refuse, stable manure, or decaying organic matter. In six or eight hours the eggs are hatched into maggots. The maggot develops in four or five days, and in turn becomes enveloped in a hard brown case. After five days the case opens and the adult fly appears.

The best way to exterminate flies is to destroy the breeding places. Until recently there was no simple, efficient and inexpensive method known whereby maggot life (the early stage of fly life) could be destroyed in manure without injuring the fertilizing value of the manure.

Paris green in watery solution—one pound to twenty-five gallons of water—appears to be the solution of the problem. It proves to be highly efficient, as a maggot killer; it is easy of application, comparatively inexpensive, and, in a negative way, increases rather than diminishes the fertilizing qualities of the manure.

Take a common garden watering can, fill it with water, add a teaspoonful of Paris green and stir until dissolved. Use this daily on the fresh manure and you will swat the fly in the most effective way.

This weak solution is not dangerous to stock; they would have to eat large quantities of the bedding to be affected.

A can of this solution should be kept in every barn and labeled "POISON."

Further information on this subject is contained in this bulletin: "Practical Methods of Disinfecting Stables," Farmers' Bulletin No.

Horses are often used to haul logs in the pine belt when it is inadvisable to build a railroad to transport them.

480, issued by the Division of Publications, Department of Agriculture, Washington, D. C.

In all the camps where horses are stabled, with the single exception of those of one large company, no effort was made to remove the manure frequently and sterilize the premises.

Manure piles varying in size up to six feet in height and forty feet in length were found. It is easy to conceive what were the immense possibilities of fly propagation under these circumstances.

When the absence of effective screening is considered in connection with the other insanitary conditions generally prevailing in the camps, the close connection of flies with "camp disorders" is easily understood.

The sanitary regulations of the U. S. Reclamation Service, Washington, D. C., state that:

The most important sanitary provision in connection with camps is that of exclusion of flies from cook tents, mess tents and privy vaults; yet this is the very provision which is most frequently overlooked.

Therefore, special care should be taken to exclude flies from all places in which foodstuffs are exposed, and, if necessary, in the large camps a man should be detailed to accomplish this purpose.

Of equal importance is the thorough screening of privy vaults and vault apartments, for it is from such places that flies, carrying upon their bodies effete material, diffuse throughout the camp an epidemic by coming in contact with food.

Without proper screening, a disastrous epidemic of typhoid may be easily spread through a camp if one of the members of the camp, or indeed, a transient guest, should be in the prodromal stage of the disease. It is at these times that the discharges are most virulent.

(Manual of the Reclamation Service, pp. 319-324.)

PART III—SUMMARY BY DISTRICTS.

The following reports are a résumé of some of the salient matters under investigation in the various districts:

A. NORTHERN PINE DISTRICT.

Location. This includes the counties adjacent and to the north of the Feather River, to wit: Modoc, Lassen, Plumas, Butte, Tehama, Trinity, Shasta, and Siskiyou, extending to the Oregon state line. It extends also from the Sacramento Valley to the Nevada state line.

Plants. The companies visited included sixteen sawmill companies operating nineteen sawmills, seven box factories, one match factory, one veneer factory, three sash and door factories, besides numerous lumber yards and planing mills; also three independent box factories and two sash and door cutting factories. This number embraced all the important lumber manufacturing establishments in this district.

Thirty-nine camps of lumber companies in this district were also inspected.

The total number of employees listed on the pay rolls of these companies at the time of the visits was 5,583. This is exclusive of employees of railroads which are common carriers.

Families. Two hundred fourteen families were living in the camps of these companies. This number does not include those living in the towns, whether owned by the companies or not. Those communities where all or nearly all of the property is owned and held by a company, and under the supervision of one person, are usually dubbed "one man towns," or "company towns," and there were eight of these in this district.

Camp life in the pine woods affords a pleasant diversion during the summer months for many families of employees who reside in towns during the balance of the year.

Employment Agencies. Six companies use employment agencies and import men from Sacramento, Marysville, Redding, and Portland, Oregon.

Board. The cost of living in the camps of this district is equal to, or greater than it is in any other section of the state. The rates charged by the various companies and deducted monthly from the wages of their employees in the logging camps were as follows:

Three companies charged \$20.00 per month.

One company charged \$21.00 per month.

Eight companies charged at the rate of 25 cents per meal, or \$22.50 per month.

The rates for board in company hotels average higher than this, usually to \$25 per month for board, or \$30 to \$32 per month for board and room.

Housing. In all logging camps, except those of one company, the housing is free. One company furnishes iron beds with spring mattresses, hot and cold tub baths, and laundry work, for \$2.50 per month extra. This charge is obligatory. Chinamen in these camps do the laundry work and attend to the bathhouses. The Chinamen receive \$65 to \$70 per month and board themselves. Wood fuel for heating water for laundry and baths cost \$3 to \$3.50 per cord. "Bull cooks" in the camps cut the fuel into two foot lengths; sweep out the bunk tents; clean up the camps; haul garbage to the pigs, and receive \$40 per month and board. A camp of fifty men, each paying \$2.50 per month, the manager stated, would justify the conveniences and service rendered in these logging camps.

The present method of bunkhouse construction is based upon using movable buildings which may be shifted onto logging cars and moved to new locations. The size of these bunkhouses depends somewhat on the size of the logging cars, which in turn vary with the gauge used

for railroad tracks. For instance, narrow bunkhouses must be used where narrow gauge tracks are maintained.

The best bunkhouses were 10 feet by 16 feet or 10 feet by 18 feet in size, each having three half-windows, a door and one stove. These accommodate three or four men each, and were very satisfactory. Other bunkhouses used in conjunction with a narrow gauge railroad were 9 feet by 20 feet, having two doors and four windows. Bunk cars were found of various sizes. Two were 8 feet by 40 feet and 9 feet high, containing sixteen bunks—eight above and eight below. Each bunk had a small window, 10 inches by 16 inches, hinged beside it, which might be left open or closed at the option of the occupant. Two half-windows were at the sides of the car and a stove in the center. Entrance was had through doors at either end. A train consisted of two bunk cars, a dining car, a cook and commissary car.

At another place the bunk cars were 10 feet by 20 feet, having four wooden bunks each. One car, 10 feet by 20 feet, had four double-deck wooden bunks. Another car, 10 feet by 30 feet, had seven wooden bunks on the floor. Each car had three half-windows and a door. Not all of the woodsmen, however, live in cars or bunkhouses. For instance, in one camp there were twenty-four tents, 12 feet by 14 feet, provided with three single iron bunks, and a stove in the fourth corner. Four tents, 20 feet by 40 feet, had eighteen single iron bunks. These tents were floored and were regularly cleaned out by a "bull cook." At another camp there were nine tents, 12 feet by 14 feet, unfloored. Two had two wooden bunks each; one had three wooden bunks, and four had four wooden bunks. One tent, 14 feet by 20 feet, had six single wooden bunks. Two men had been sleeping on the hay in an open stable until two others left the camp, when they took the vacant bunks. At the sawmill camp of this company the assistant superintendent stated that "some of the men craved permission to sleep in the hay mow at the large stable," in preference to sleeping in the bunkhouses. The reason was obvious—bedbugs were too prevalent here. At this place one bunkhouse, 20 feet by 40 feet, had a ridge pole 20 feet above the floor, and the roof sloped from the ridge pole to a height of 9 feet from the floor. This house had two half-windows on the south side, both closed; a double window on the west side was never opened, and the one half-window on the east side was closed. The only door was left open. This house was provided with eleven wooden bunks and was occupied by Italians, who insisted on keeping the place entirely closed at night. One Italian was found here sick with pneumonia, sleeping on straw bedding in a wooden bunk. The company doctor had been treating him here instead of securing a better place for him. This employee had been with the company for some time, paying hospital fees, and in his extremity was treated little better than a dog.

A logging train en route to the sawmill. Such bridges, on curves, as here shown, are in general use.

Suffice to say, when the superintendent was informed by the special agent of this case, the man was removed to better quarters and given better care.

Permanent bunkhouses, as found in some of the older camps, were very dilapidated; were equipped with double-deck wooden bunks and were greatly in need of cleaning.

Only two companies were paying a considerable amount of attention to the matter of the proper housing of their men. Three companies only were employing camp flunkies or "bull cooks."

Hotels. Four companies maintain public hotels for the accommodation of transients as well as their own men.

Bunks. Only two companies had installed iron bunks in their logging camps, while another company had just ordered some which were on the way. Since the survey was made nine companies have installed 1,713 single and 159 double-deck steel bunks. Two companies, which began operations in 1914, have likewise installed iron bunks. These companies are entitled to considerable commendation for their efforts toward the proper housing of their employees.

Coupon Books. Ten companies operate mercantile stores, and of these seven utilize coupon books in denominations of \$1, \$2.50, \$3, \$5, \$10 and \$20.

Hospital Fees. Fourteen companies deduct \$1 per month as a hospital fee. This fee is obligatory.

Taxes. In Lassen, Plumas and Butte counties, the road tax is \$2, poll tax, \$2, county hospital, \$1; in Shasta County, the road tax is \$2, hospital tax, \$2, poll tax, \$2; in Siskiyou County, the road tax is \$2, poll tax, \$2. These taxes are deducted each year by the companies on the demand of the various assessors, from the wages due their employees.

Lights. In the logging camps, kerosene oil or candles are used for lights. In no instance was electricity used for lighting purposes.

Dining-rooms. In nearly all cases, the dining-rooms were adjacent to the cookhouse for convenience in performing the work. Only fifteen dining-rooms were effectively screened, while twenty-four were not. It seemed incongruous to find camps, which in all other respects were above reproach as to sanitation, lacking in screening for their dining-rooms and kitchens. Some cooks were careful to keep garbage cans covered to protect the garbage from flies, while the kitchens were unscreened. Some kitchens were screened throughout, but one or more doors were either tied open or deliberately left open. One company had completed a first class new dining-room and cookhouse, equipped with screens on the windows, but without screen doors.

Garbage. The inevitable kitchen refuse was disposed of to hogs kept on the premises. In most cases the garbage cans and barrels were found uncovered and attracting flies. The garbage was placed, as a rule, in barrels, which were hauled away on sleds to the hogpens. In one place, the garbage was transported through a flume to the hogpen. Waste kitchen water was carried away by pipe, flume, or open ditch, and only one company disposed of it into septic tanks. These tanks were seventy-five feet from the kitchens, and were earthen pits 8 feet by 18 feet, 8 feet deep, covered with boards, with earth on top.

Stables. In the "wheel camps," horses are extensively used. The manure in most of these camps was allowed to accumulate alongside of the barns to a height of four to six feet. At least thirteen such cases might be cited. Stables were built of various types, varying from frame buildings to those entirely enclosed by tenting. The only company using the latter method was making a creditable effort to dispose of the manure pile, and to disinfect the premises regularly by a preparation of diluted creosote. The tenting extended to the ground, and by keeping the interior of the barn dark, the flies remained outside.

Toilets. In the matter of toilets, a wide variation of conditions was found. Sanitary toilets were in use in some factories. In two factories, their use had been interfered with by miscreants who used blocks of wood to put them out of order. In other places, the vaults were full, and the toilets should have been moved, and at one camp there were no toilets. Several companies were using chloride of lime regularly to disinfect the toilets, while at other places, no attention whatsoever was paid to them. In the best camps, the privies were placed directly to the rear of, and over one hundred feet from, the bunkhouses, the intervening space being cleared of all underbrush, so that the privies were readily accessible. Further than this, the privies were so enclosed as to keep the vaults dark. In consequence of this precaution, the flies did not frequent the vaults. This is an important precaution in the prevention of the carrying of typhoid germs, by flies, from the toilets to the dining-room.

Baths. In three camps of one company, shower baths were used. These bathhouses were 8 feet by 12 feet, 7 feet to the eaves, and had pitched roofs. Small windows were in the upper portion at either end of the building. Two shower rooms, 4 feet by 4 feet, were partitioned off at one end of the building; a door was at the opposite end, and a latticed floor was used on which to stand. These houses were of the portable type, so that they could be shifted from place to place with the bunkhouses. Hot water was supplied through four

coils, 30 inches long, made of 2 inch pipe, laid flatwise near the ground. An oven was dug underneath in which the wood fuel was placed. Any employee could start a fire in the oven at any time, and the hot water would be ready by the time he was prepared to bathe. The water was supplied to the coils by gravity pressure from a tank car at some distance away. This was the cheapest, if not the most efficient, shower bath arrangement found in use. Only "white" men were employed by this company in its camps, and they were appreciative of the shower baths furnished for their use. No charge was made, in these camps, for the use of the shower baths. Two sawmills and one box factory had shower baths.

Another lumber company, in two of its logging camps, had portable bathhouses, on skids. Each of these contained three bathtubs supplied with hot and cold water, the waste water going to a septic tank. Coils were placed in ordinary stoves and the water, when heated, passed into a 400 gallon tank. Both houses had stoves to heat them, and were well kept by Chinese who operated laundries for the men.

Water. Most of the camps are supplied with spring water, piped directly from springs. In several instances, these pipes extend upwards of a half mile in order to insure a perfectly safe supply of water. In several places, the water was brought through open ditches, or was transported to camp by the use of tank cars. In one instance, a redwood pipe line, five miles in length, was being constructed to supply a sawmill camp with a pure supply of water. One shallow well was found in the vicinity of a barn, where the manure was piled five and six feet high on both sides of the barn. The water from this well was used by Hindus, who occupied the nearby bunkhouses.

At a camp, near a marsh, a ten foot well was found where the water was very whitish, due probably to seepage from the marsh. The same company had another well fifty feet from a creek, and water was hauled to camp from this place. So far as could be ascertained, no typhoid infection had been traced to any of the sources of water supply.

Food. Four companies were notorious for the bad food supplied to their men. One company supplied, in its cookhouses, "oleo," and poor meats, which the housekeepers in the camps refused to purchase.

Liquor. None of the companies handle liquor or permit its sale in their logging camps. Two companies sell liquor at their stores, or barrooms, under certain restrictions, but this is only done to keep the men from going elsewhere. As a rule, the managers appear to be strongly opposed to the use of liquor by their men.

Interior of a sawmill showing method of operation with a band-saw. The log, on the "carriage," is under the control of the band Sawyer operating the two levers, as shown at the left. He is assisted by the "setter," and two "doggers" on the carriage.

One company erected its plant about twenty-five miles from town, and arranged, at heavy expense, for a railroad to be extended to its property, in order to be entirely free from the proximity of saloons. It will allow no liquor to be brought on to its land. One lumber company has issued the following notice:

Commencing June 1, 1914, all employees of the company must refrain from using intoxicating liquors, and all officers shall refuse employment to men known to frequent saloons.

This company employs upwards of sixteen hundred men, in various capacities, and the above notice will have a far-reaching effect upon them.

At one camp, the donkey engine set fire one night to some nearby timber. It required all the men in the camp to put out the fire, which caused the loss of the donkey engine and considerable timber, having a value of over \$600. This loss was due to the failure of a trusted night watchman to be at his post of duty, because he had imbibed too freely following a pay day.

Another company has posted a set of rules, which includes this warning:

Any employee appearing on or about the works of this company in an intoxicated condition, subjects himself to dismissal.

Hospitals. Five companies had constructed and were maintaining hospitals. One of these could hardly be called such, as it was an old, one story, frame building, built of unplanned lumber. Instead of plastered walls, the boards were covered with newspapers. It consisted of two rooms, 10 feet by 12 feet, and 12 feet by 14 feet, used for bedrooms, and one room, 12 by 16, used for drug supplies and for cooking purposes. One bed was in the first room, and two were in the second room. The windows were unscreened. The movements of the logging trains past this hospital caused the building to shake, and thus to disturb those who were so unfortunate as to be confined there, so that they were unable to sleep during the day. Such an establishment would not be tolerated elsewhere. This company was collecting several hundred dollars monthly, however, as hospital fees.

The other hospitals were well equipped, and a credit to the companies which maintained them. One was particularly deserving of praise, on account of its superior equipment. This hospital had a fine X-ray outfit, also anti-toxins for tetanus, diphtheria, and meningitis. There was an isolated building for contagious cases, also a morgue and a mortuary chapel. Two cases of typhoid were in the hospital at the time of visit. One was a Greek, a former employee, who went to San Francisco, became sick with typhoid, and returned here long enough to get his name on the pay roll, when he had to

come to the hospital for treatment. This, apparently, was a case of imposition on the company.

Medical Cabinets. In seventeen instances, medical cabinets were supplied, while in twenty-two other instances they were lacking. At several places, the cabinets were not fully equipped in accordance with the law.

Doctors. In most cases, doctors were located at, or near, the saw-mills, convenient of access to the camps. These camps vary in distance, from one to thirty-five miles from the doctor's offices. Several of the companies have issued instructions to detach engines from any train, in emergency cases, and bring those injured directly to the doctor.

Sickness. Stomach trouble appears to be one of the most prevalent physical disorders in the lumber camps. Typhoid had broken out in but one camp, which had sent four cases to the hospital. The cause of this trouble was not definitely known at the time of inspection.

Accidents. The companies investigated had reported to the Industrial Accident Board during the year 1913, a total of thirteen men killed, eight permanently injured, and one hundred twenty men disabled for periods exceeding seven days each. This, however, is not to be considered the total number injured, for several of the companies were negligent in the matter of reporting accidents. A large number of minor accidents had also occurred, incapacitating employees for less than seven days, but these, however, were not required to be reported.

Minors. Twelve companies were employing thirty-four boys under eighteen years of age. When the requirements of the law were explained to the various managers, twenty-one of these boys were discharged, as they could not be profitably employed on a forty-eight hour weekly schedule. At least three of these boys were glad to return to school, which was then in session.

Wages. Six companies were found negligent in the matter of paying wages to their employees on, or before, the fifteenth of each month. No company was found paying in cash, all of them using negotiable bank checks instead.

Noon Hour. One company gave its employees forty-five minutes at noon—a violation of the requirement for a full hour for the noon-day meal. At this plant, the men were given but forty-five minutes in order to get through with the twelve and one half hour schedule earlier in the evening.

Blowers. In the matter of blowers nearly all the factories and mills were found to be well equipped. In one instance, a sand-papering machine was found to be without a proper connection to the blower system of the plant.

Hours. The hours of labor, in all the camps and mills, are ordinarily limited to ten per day. Two sawmills and several box factories were operating "time and a quarter," that is to say, twelve and one half hours, for which the employees were paid "straight time" for the two and one half hours overtime.

Cooks. Seven companies, operating twenty camps, were employing Chinese cooks; four companies, operating five places, were employing women, while the other companies employed "white" male cooks.

Nationalities. Nearly all nationalities were represented, to a greater or less extent, in this district. Only one company in this state employs Hindus. This company is in this district, and employed ten Hindus in piling lumber. The leading nationalities are American, Italian, Greek, Swedish, and German, in the order given.

B. NORTHERN REDWOOD DISTRICT.

Location. This district embraces Del Norte, Humboldt, Mendocino, Sonoma, and Marin counties, all bordering on the Pacific Ocean, and traversed by the Coast Range mountains. Lumbering is carried on, almost exclusively, in the redwood forests of this belt, which extends from the Oregon line southerly for a distance of two hundred miles.

Plants. The plants visited, included those owned by seventeen companies, operating eighteen sawmills, most of them having shingle departments in connection with their plants; eight shingle mills and their camps; two door and planing mill plants, and one cooperage plant.

Forty-six logging camps were inspected in the first three above-named counties. Statistics of 7,198 employees were secured of the various lumber companies. There were doubtless 1,500 other employees, of whom no statistics were obtained, because three large companies and several smaller ones had closed down their plants or camps prior to the conclusion of the survey at Christmas, 1913.

Families. One hundred eleven families were residing in the camps. The desirability of families living among the redwoods is not nearly as great as it is in the pine belt. There is less sunshine in the forests, and the air is not nearly as invigorating as in the pine district. Eight communities might be termed "one man towns," or "company towns," where all or nearly all the property was controlled by the local lumber company.

Employment Agencies. Practically all the companies, in and near Eureka, avail themselves of the services of employment agents having offices either in Eureka, or in San Francisco. The lumber companies maintain, in Eureka, a free employment agency, though licensed agencies also operate there. Men are brought from San Francisco by boats, owned by the various companies, to work in the logging camps in Del Norte, Humboldt, and Mendocino counties.

A train load of lumber being hauled from the sawmill to the lumber yard.

Board. A number of the companies make no deduction for board. Wages in such cases include board. In cases of rainy weather, or when other conditions prevent operations, no deduction is made for the board furnished and the companies stand the loss.

The companies have set a value on their board, which has been added to the wages of their employees, in order that an average scale of wages in the various occupations in the lumber industry might be determined.

Nine companies, in Del Norte and Humboldt counties, figured their board at \$15 per month, and three at \$18.

In Mendocino County, four companies figured their board at \$12 and one at \$13 per month. It is manifest that these values must be considerably below the actual cost of the board furnished, but, as one manager expressed it, "they would rather stand the loss on the boarding houses than to increase the wages of the men." One company, in Mendocino County, had announced that, beginning with January 1, 1914, board would be charged for at the rate of \$18 per month. Nothing was announced as to any increase of wages for those who boarded at the company's cookhouses.

Housing. In none of the logging camps is a charge made for accommodations furnished. A number of the camps have been located for several years without being moved, and generally speaking, the premises were greatly in need of attention. As in the pine belt, the companies extensively use portable bunkhouses of various sizes. Most of these houses are 12 feet by 16 feet, or 12 feet by 18 feet, accommodating three or four men each. In Mendocino County, the houses were generally 10 feet by 16 feet, and were arranged to accommodate four men each.

In several of the "company towns," the men were able to secure good housing accommodations, with conveniences, by paying \$2.50 to \$3 each, per month, where two men occupy one room, or up to \$10 per month, where one man occupied a room exclusively.

Hotels. Three companies maintain hotels for the accommodation of transients. One of these has been beautifully finished, in the office, lobby, and dining-room, with burl redwood, and this hotel is the only one so finished to be found anywhere.

Bunks. With one exception, all the lumber camps in this district were supplied with wooden bunks. One company not only had installed iron bunks, shower baths and a screened dining-room in its well arranged camp, but also had electric lights installed in each bunkhouse, so that they were well lighted up to 10:00 p. m. This camp was referred to as the model one of Humboldt County, and was the nucleus of the extensive camp improvement work which has been done, since the

survey was made, by the managers of the other lumber companies in this county.

Since the inspection of these camps, thirteen companies in Humboldt and Del Norte counties have installed 1,891 steel bunks.

Six large companies, in Mendocino County, employing hundreds of men, have installed only forty-five single steel bunks in their logging camps—a very poor showing compared with their northern competitors.

Coupon Books. Thirteen companies were operating mercantile stores, and of this number only two companies used coupon books. One company was using, instead, a species of paper money, while other companies kept sales slips recording the various purchases.

Hospital Fees. Six companies made an arbitrary deduction of one dollar per month as a hospital fee; two companies charged ninety cents per month, while others required their employees to carry hospital cards. These were secured from several hospitals, in or near Eureka, at the option of the holder, on the basis of one dollar per month, or ten dollars per year.

Taxes. In Del Norte County, the road tax is \$2, and hospital tax \$3; in Humboldt County, the road tax is \$3 and poll tax \$2; in Mendocino County, the road tax is \$2, hospital tax is \$1, poll tax \$2. These several amounts were deducted from wages of employees by the various companies as required by the assessors.

Lights. One company was using calcium carbide to generate acetylene light for use in its dining-rooms. One camp was equipped with electric lights in the bunkhouses, while in the balance of the camps the men maintained their own lights.

Dining-rooms. As in the pine belt, the cookhouses and dining-rooms were usually combined in one building for convenience. Of those visited, thirty-three were not effectively screened, leaving only about six houses which were effectively screened. Where women were employed, they were more particular than where men only were employed, to keep the dining-rooms screened and darkened to exclude the flies.

Garbage. In nearly all cases, garbage was disposed of to the hogs, which were kept in the various camps. The usual mode was to haul the garbage in barrels, on sleds, or carry it in pails to the pens. In most cases, the garbage cans were left uncovered.

Stables. At least six camps had large accumulations of manure on the premises. Horses are not used in the redwood districts as extensively as in the pine districts.

Toilets. In the matter of toilets, the sanitary conditions in many of the camps deserved severe criticism. Three privies in one camp were found to be completely filled. The foreman stated, in extenuation, that

his was all right, and he considered that the men were capable of taking care of theirs. Seven camps were not provided with toilet facilities, while at least two other camps had toilets over gulleys, where the excreta was subject to the action of flies.

Baths. As mentioned heretofore, only one camp was found to be supplied with a shower bath. The men here were slow at first to avail themselves of the privileges of the bathhouse, but after a short while it came into general use and was greatly appreciated.

Water. Water is piped to the camps from springs in nearly all cases. The length of the piping varies from one hundred feet to two and one half miles, indicating that every effort is made to secure a pure supply of water. In two cases, well water is used, and in one case, water was flumed for five miles.

Food. The quality of cooking varied with the class of cooks employed. No general statement can be made on the character of the food supplied. Some companies were very particular about having a good variety of food, while others left it largely to their cooks, who, if they lacked initiative or ability, or had limited supplies, were apt to furnish but very little variety.

Liquor. While liquor was not sold by any of the companies visited, it was readily obtainable by their employees. No regulations regarding its use on the premises of the various plants, had been posted. Outside of a few towns where liquor is sold, Humboldt and Mendocino counties are "dry."

Hospitals. Two companies owned and maintained their hospitals, while the other companies had arrangements with various doctors to take care of their cases. In Eureka, three large hospitals are located, which issue hospital tickets. Their clients are cared for by them when occasion requires. Tickets are sold by these hospitals on the basis of one dollar per month, or ten dollars per year.

Medical Cabinets. There were eighteen violations noted of the Medical Cabinet Law. These violations were probably due, in most cases, to lack of knowledge of the law, and not through any intent to evade it. In a number of instances the cabinets were not fully supplied with various articles designated in the law.

Doctors. The most remote camps were located at a distance of twenty-five miles from a doctor, though usually doctors were available ten to fifteen miles from the camps. Three companies had their railroad men instructed, whenever such emergencies arose, to bring injured woodsmen directly to the hospital, on special engines.

Sickness. No typhoid cases were found, and but one smallpox case was reported during the survey. Where the patient contracted smallpox was not known at the time of inspection.

A view of a flume used to convey lumber from the sawmill in the mountains to the lumber yard sixty miles away.

Accidents. During the year 1913, the various companies that were inspected, reported to the Industrial Accident Board a total of twenty-one men killed, thirty-nine permanently injured, and four hundred twenty-five employees incapacitated for periods exceeding seven days each. Accidents of a minor nature were not required to be reported, but the number of them was very large.

Minors. Six companies were employing ten boys in violation of the Child Labor Law, the violation consisting, in each case, of employing them over forty-eight hours per week. One minor was discharged, as the company could not utilize his services on a forty-eight hour basis.

Wages. One company was negligent in not paying its employees on or before the fifteenth of the month succeeding that in which the wages were earned. All the companies use negotiable checks in payment of wages.

Noon Hour. Three companies allowed their employees thirty minutes for lunch at noon, one company allowed forty-five minutes, and another allowed fifty minutes, for the same purpose. In several of these cases, this was done at the wish of the men themselves, in order that they might get home earlier in the evening.

Blowers. Owing to the nature of the redwood sawdust—it being heavily saturated with moisture—it does not work well in a blower system, and, as a result, most of the plants were not so equipped. One company, however, had installed a first-class blower system that effectively disposed of all of its redwood sawdust and shavings. This company utilized this refuse in the operation of its electric light plant, which supplied electricity to six towns along the Mendocino coast. It also operated its sawmill at night, largely for the reason that the waste fuel was necessary for the above purpose. Sawdust was especially noticeable around shingle saws, because the devices used were not adequate to prevent it from being carried through the mills.

Redwood sawdust is said to have a strong acid nature, and to be somewhat poisonous when in contact with open wounds.

Hours. All camps and sawmills operated on a ten hour basis. In Eureka, two independent planing and moulding mills were operated eight hours a day on a union scale of wages.

Cooks. Twenty-four lumber companies, operating in 1913, in Humboldt and Del Norte counties, had seven camps supplied with male cooks, assisted by female help; ten camps were operated by male cooks exclusively, and twenty-six camps operated with women cooks.

The particular reason why Chinese cooks are not utilized in Humboldt County was explained as being due to their being driven out of the county years ago in consequence of which none have returned. It

is to be regretted that the same condition does not obtain elsewhere in this state.

All the seventeen camps in Mendocino County were operated with Chinese cooks.

Nationalities. All nationalities were represented in this district. Finns, Russians, and Portuguese are largely employed here, but are not found elsewhere in the state to any extent. Even Turkey, the Philippines, Australia, and Porto Rico have representatives on the various pay rolls. However, Americans and Italians are the leading nationalities in the number of men employed.

C. SOUTHERN REDWOOD DISTRICT.

Location. The counties of Santa Clara and Santa Cruz may be said to comprise this district, though sawmills were operating only in the latter county. This district is well logged out for lumber. At the present time the work is principally done by wood-choppers in remote camps, of whom no statistics were obtainable.

Plants. Three sawmill companies were operating in the spring of 1914 in Santa Cruz County, and one of these expects to be through with its logging this year. These companies employed 284 men.

Families. Twenty-four families reside in the logging camps.

Board. Two of the companies figure their board at \$20 per month, while the third figures it at \$18 per month. The men in the several camps of these companies live in bunkhouses, which were generally 8 feet by 14 feet or 10 feet by 16 feet in size.

Hotels. No hotels were operated by these companies.

Bunks. One company this year, of its own initiative, had installed seventy-five steel bunks, while the other companies continued the use of wooden bunks.

Coupon Books. None of the companies operated mercantile stores, hence did not utilize coupon books.

Hospital Fees. One company deducted one dollar per month as a hospital fee. This charge was obligatory.

Taxes. In Santa Cruz County, the road tax is \$2, and the poll tax is \$2, which taxes are annually deducted by the several companies from the wages of their employees.

Lights. Kerosene lamps were utilized for lighting purposes in the various camps.

Dining-Rooms. Of the four dining-rooms visited, three were effectively screened.

Garbage. Garbage, in cans, was not protected from flies. As in other camps, it was disposed of to hogs kept on the premises.

Toilets. The privies in the camp were in fair condition.

Baths. No shower baths were available in any camp. One manager stated that he intended to install a shower bath as soon as he moved his camp to another location.

Water. Water was supplied from nearby springs.

Hospitals. No hospitals were maintained by these companies. Arrangements were made with various doctors to take care of the accident cases as they occurred.

Medical Cabinets. One company was supplied with medical cabinets and the other companies planned to install them.

Sickness. No cases of typhoid or other contagious diseases were found in any of the camps.

Accidents. No accidents were reported during 1913, to the Industrial Accident Board by any of these companies.

Minors. No boys were employed at the time of the inspections.

Cooks. Chinese cooks were employed in the three camps which were visited.

Nationalities. The principal nationalities represented are the American and Italian.

D. SOUTHERN PINE DISTRICT.

Location. The extensive logging operations in the southern part of the state are carried on in Tulare, Fresno, Madera, Mariposa, Tuolumne, Calaveras, Amador, El Dorado, Placer, Nevada, and Sierra counties.

From west to east this district extends from the Sacramento and San Joaquin valleys to the summit of the high Sierras.

The timber which is being logged is the best to be found anywhere. Lumber from gigantic sequoias and splendid sugar pine trees forms a large portion of the output from this district.

Plants. All the sawmill plants in this district were visited. The list includes eleven companies, operating eleven sawmills, eight planing mills, eight box factories, three sash and door cutting factories, one sash and door factory, one shingle and lath factory. Two independent planing mills and box factories and one door factory were also inspected.

Statistics regarding 5,495 employees were obtained.

Families. In twenty-one camps, operated by these sawmill companies, ninety-two families were residing. This number is exclusive of those families that reside in what are termed "one man towns," or "company towns," of which there were seven.

Loading a vessel at sea, with lumber, as performed along the Mendocino Coast.

Attaching a load of lumber to the pulley block preparatory to transferring it on board the ship.

Employment Agencies. Only one company utilizes employment agents to any extent, while the other companies send to their city offices for men as needed.

Board. Two companies figured board in their logging camps at \$15 per month; two at \$18; five at \$20, and two on a basis of twenty-five cents per meal. In several cases the wages in the camps included board.

Housing. Most of the bunkhouses were 9 feet by 20 feet, 10 feet by 20 feet, or 12 feet by 16 feet, in size. They were made to accommodate three or four men each, and were generally built on skids so that they could be hauled onto the logging cars and moved elsewhere.

Hotels. Four companies furnish hotel accommodations to transients.

Bunks. In this district, seven companies this year, of their own initiative, have installed eight hundred thirty-nine single steel bunks in their various camps. The other companies continue the use of wooden bunks, with straw for bedding.

Mattresses for use on iron bunks are supplied by one lumber company at cost, i. e., two dollars, in order to encourage their use. Should an employee, on leaving, desire to leave his mattress, the company will rebate a dollar for it if it is in fair condition. Other companies prefer to sell the mattresses at cost and let the matter end there.

Coupon Books. Seven companies operate stores and utilize coupon books, while another company, instead, utilizes sale slips in its store to record purchases.

Hospital Fees. Ten companies have a one dollar hospital fee. One of these charges twenty-five cents per day for four days, or one dollar per month. Another makes no charge for less than ten days. Another charges ten cents per day, with a maximum of one dollar per month. It will be seen that these various arrangements primarily affect those who may leave the service of the various companies during the early portion of a month.

Taxes. In Madera, Fresno, Tuolumne, and El Dorado counties, the road tax is \$2, poll tax is \$2; in Merced County, the road tax is \$3, poll tax, \$2; in Nevada County, the road tax is \$2.50, poll tax \$2. These amounts are deducted from the wages of the employees on the demand of the various assessors.

Dining-rooms. At least ten dining-rooms were not effectively screened; that is, they may have been screened, but by neglecting to keep the doors closed, any resultant good from the screening was entirely lost.

Dining-rooms in the camps are adjacent to, or a part of, the cook-houses, as elsewhere in the state.

Garbage. Many garbage cans were found uncovered, and the garbage was in all cases disposed of to hogs kept on the premises.

Toilets. At one place the toilet facilities were greatly in need of attention. Several companies were making a very creditable effort to maintain sanitary conditions in their camps, and willingly made desirable changes.

At another place, the effluvia from the overflow in an open ditch from a septic tank, constituted a decided annoyance, if not a menace to the health of the entire neighborhood. Only a few feet of tiling was needed here to conduct the overflow into a large mill pond, to abate this nuisance.

Shower Baths. Only one company had installed, in its logging camps, a shower bathhouse. This building was 24 feet by 30 feet in size, having a door at one end and three windows on each side. The opposite end from the door was partitioned off into four rooms 6 feet by 6 feet, equipped for shower baths. One of these was reserved for ladies, who had exclusive use of the premises on certain occasions. Hot and cold water was ready at all times for use, and the place was well patronized. It was kept open Saturday nights until ten o'clock, and all day on Sundays. Two long tables in the room were supplied with magazines and papers, and the place was a very popular rendezvous for the men every night. It served the purpose of a club room very nicely, and was the only instance of this kind found in the logging camps of this state. The foreman stated that one man took a bath every night, while another woodsman—a faller—had not taken a bath in three years.

In this camp, two Chinese were employed to wash the clothes of the men. Each man was allowed to have two suits of underwear, two pairs of socks, two overshirts, and two towels washed each week, for which the nominal charge of \$1 per month was deducted from the wages of the men. This plan dispenses with the necessity of many having to heat up water to do their own washing, in the limited time which they may find for the purpose every Sunday. This work is too often entirely neglected when left to the men to perform.

Water. Instances may be cited where water is piped 400, 500, 1,200, and 1,300 feet, and, in at least two cases, a mile and a half, in order to insure a good supply of pure spring water for the use of employees. At one camp, water was hauled by wagon, and, in another place, well water was used.

Hospitals. Seven companies own and operate hospitals on their premises. The other companies have arrangements with nearby doctors and hospitals to handle their emergency cases.

Medical Cabinets. Five companies had equipped with medical cabinets, while six had not equipped in conformity with the requirements of the medical cabinet law.

Sickness. In one town only was an epidemic of typhoid fever found among the employees of a sawmill company. Subsequent to this outbreak, the company went to very heavy expense to clean up the premises, to guard against further contagion, and later, when the inspection was made, the old toilets in the lumber yards were found without roofs over them. Comments are unnecessary.

Accidents. From the companies visited, the Industrial Accident Board received reports, during the year 1913, of nineteen men killed, thirteen permanently injured, and one hundred fifty-two employees disabled for periods exceeding seven days each.

Minors. Two companies were employing seven boys, under the age of eighteen years of age, in violation of the eight hour law for minors.

Wages. No violations were noted of the law requiring the payment of wages on or before the fifteenth of the month. Several instances were noted where men were expected to travel upwards of sixty miles, at considerable expense, to secure their pay checks.

Noon Hour. No violations were noted of the law requiring an hour for noon in sawmills.

Blowers. The various plants were well equipped with blower attachments on their woodworking machines.

Hours. The working schedule throughout this district was based on a ten hour day. One sawmill operated day shifts for twelve and one half hours for five days, and ten hours for the sixth day; another operated a sawmill on a twelve and one half hour schedule for six days per week, while another company operated its day shift in the sawmill for ten hours, and the night shift for eleven hours, for five nights, and five hours on the sixth night.

Cooks. Five companies employ white cooks, including one camp having a woman cook; five companies employ Chinese cooks, and one company employs Japanese cooks.

Nationalities. The principal nationalities represented are the American, Italian, French, and Swedish. Greeks and Mexicans are also largely employed.

A view of a splendid hospital completely equipped, owned by a lumber company in the Northern Pine District. An isolation hospital for contagious cases, a morgue, and a mortuary chapel are nearby.

A reconstructed "speeder," equipped with a stretcher, set apart for emergency use.

PART IV—CONCLUSION.

Bibliography. In order to secure a fair understanding of the extent of the land holdings, nature and variety of the lumber operations, and other matters connected with the lumber industry in California, the following brief list of public documents is recommended for reference:

"The Lumber Industry," Parts 1, 2, 3 and 4, issued by the Bureau of Corporations, Department of Commerce, Washington, D. C.

"Wages and Hours of Labor in the Lumber, Millwork and Furniture Industries, 1890-1912," Bulletin 129, issued by the Bureau of Labor Statistics, U. S. Department of Labor, Washington, D. C.

"Wages and Hours of Labor in the Lumber, Millwork and Furniture Industries, 1907 to 1913," Bulletin 153, issued by the Bureau of Labor Statistics, U. S. Department of Labor, Washington, D. C.

"Lumber, Lath and Shingles, 1912," also series of pamphlets on "Forest Products," issued by the Bureau of the Census, Department of Commerce, Washington, D. C.

"Discussion of Forestry Problems, 1912," and "Report for 1912," of the Conservation Commission of the State of California, Mills Building, San Francisco.

The various reports of the California State Board of Forestry, Sacramento, California, particularly the "Biennial Report for 1912," "Annual Fire Report for 1913," and bulletin on "Fire Prevention Day, April, 1914."

General. The lumber industry may be described from many standpoints, not the least important of which is that one which concerns the men and women, employers and employees, who perform the different operations in offices, stores, sawmills, logging camps, etc.

As the leading manufacturing industry in California, it employs the most capable men in many lines of work, and, as stated elsewhere, there is no other industry in California which utilizes employees of such varied capabilities as does the lumber industry.

It must be recognized that any campaign for the observance of laws or for improved sanitary standards is largely dependent upon the attitude and cooperation of the managers and superintendents who direct the operations. The Bureau takes this opportunity to acknowledge the uniform courtesy extended to its representative by the various gentlemen connected with this industry. It was gratifying to observe the manner in which the managers and superintendents responded to the campaign for improved humanitarian standards for their employees. It has been a decided pleasure to learn of the many improvements which have resulted from our investigation. In so far as this Bureau is able to assist them by its publications, or by reference to available literature, or in other ways, it will continue its endeavor to secure and deserve the support of the fair-minded employers in this state.

THE PORTLAND CEMENT INDUSTRY IN CALIFORNIA.

About thirty years ago two plants in California were making a natural cement from the argillaceous limestones occurring at Jamul, in southern California, and at Santa Cruz, in the central part of the state. A plant at Benicia was making a cement from a calcareous conglomerate. At these plants, the natural rock was quarried and broken up by hand.

This rock, without further treatment, was burned in standing kilns of simple construction. The burnt rock was cooled and then picked over by hand.

The pieces that showed the proper degree of burning were crushed and ground to a powder in the old fashioned burr mill.

The equipment of one of these natural cement plants probably would not cost to exceed \$5,000 each. The whole process was exceedingly crude and the investment very small as compared with the modern cement plant.

Moreover, the cement made at these early plants was untrustworthy and exceedingly irregular in quality.

The cement made at Benicia was used in the construction of the city hall at San Francisco, and the poor quality is well shown in the ruins after the big earthquake of 1906.

The poor quality of the product and competition with imported Portland cement caused these natural cement plants to cease operations.

The first plant to operate successfully was started in 1898, at Colton, fifty miles east of Los Angeles.

In 1903, a plant was started at Napa Junction, and another at Cement. Both of these plants are near tidewater on San Francisco Bay.

Later a plant was established at Davenport, near Santa Cruz, about 150 miles south of San Francisco.

In 1909, a plant was started near Riverside; another plant at Roosevelt, on the Los Angeles aqueduct, which latter plant furnished the cement used in the construction of the aqueduct, and a plant at Cowell, began operations in April of this year.

In 1910 a plant was erected at Oro Grande, San Bernardino County, on the Mojave Desert, in southern California.

Lastly, in 1913, the plant at San Juan was completed.*

*"The Growth of the Cement Industry on the Pacific Coast," by Chas. A. Newhall.

Since the completion of several of these mills, they have been re-modeled, enlarged, or rebuilt. One plant, with a rated output of twelve thousand barrels per day, is the largest single unit in the world.

At the present time (1914), one plant has been shut down and is for sale; seven are operating, while the ninth plant has never operated.

The growth of the cement industry has been one of the noteworthy features of the mineral industry in recent years. The first authentic reported production of cement was in 1891, when 5,000 barrels, valued at \$15,000, represented the output.

A comparison of the annual figures representing the output since the inception of the industry, as reported by the California State Mining Bureau, is of interest.

Portland Cement Production in California, 1891-1913.

Year	Barrels	Value
1891	5,000	\$15,000 00
1892	5,000	15,000 00
1893		
1894	8,000	21,600 00
1895	16,383	32,556 00
1896	9,500	28,250 00
1897	18,000	66,000 00
1898	50,000	150,000 00
1899	60,000	180,000 00
1900	52,000	121,600 00
1901	71,800	159,842 00
1902	171,000	423,600 00
1903	640,868	968,727 00
1904	969,538	1,539,807 00
1905	1,265,553	1,791,916 00
1906	1,286,000	1,941,250 00
1907	1,613,563	2,585,577 00
1908	1,629,615	2,359,692 00
1909	3,779,205	4,969,437 00
1910	5,453,193	7,485,715 00
1911	6,371,369	9,085,625 00
1912	6,198,634	6,074,661 00
1913	6,167,806	7,743,024 00

The value of the output, as given above, represents the cost of production, and not the selling value.

In 1913, various mineral products of California ranked in importance as follows:

Mineral	Value
Petroleum	\$48,578,014 00
Gold	20,406,958 00
Cement	7,743,024 00
Stone	6,168,020 00
Copper	5,343,023 00

At the Thirteenth Census, in 1909, the production of cement was classified as a manufacturing industry.

View of interior of a boarding-house, recently built by a cement company, showing well arranged sleeping quarters occupied by its Austrian employees.

The burning of lime was likewise classified as a manufacturing industry, and where the lime was burned at the limestone quarry, the quarry was regarded as a subordinate part of the manufacturing operations.

In 1909, the census returns show that eight plants in California employed 2,407 wage earners; the value of products was \$6,504,000; the value added by manufacture was \$4,322,000, and the industry ranked sixteenth in importance.

The hours of labor were classified as follows:

Hours	Number of employees
48 and under.....	1
Between 48 and 54.....	
54.....	
Between 54 and 60.....	212
60.....	
Between 60 and 72.....	1,986
72.....	
Over.....	208
Total.....	2,407

A pioneer investigation of the wages and conditions of labor, in all the various cement plants and their quarries in California was made this year by Special Agent J. W. Atkins. The seven operating plants and their quarries were then employing two thousand twenty-one men, four women, and three Chinese.

The mill operations are continuous in their nature and are carried on with two shifts of men. In five plants, the millmen had two twelve hour shifts, while the sixth plant operated on an eleven and thirteen hour basis.

The offices and laboratories are open for eight or nine hours daily, while the quarrymen, mechanics, railroad men, and others, worked nine or ten hours daily.

Wages are paid on the basis of the hour, day, or month, by negotiable check on or before the fifteenth of each month.

The following operations may be paid on a contract basis: the loading of cars with limestone; the sewing, counting, patching, and turning inside out, of cement sacks, and the packing, tying, and trucking of cement sacks.

Wages are subject to the usual deductions for board, road tax, poll tax, and hospital fees.

Monthly hospital fees are collected as follows :

Number of companies	Fees			
	\$1.00	\$0.50	\$0.40	Under \$100—\$0.50 Over \$100—\$1.00
2	2			
2		2		
1			1	
1				1

Coupon books are not used by any cement company, and but two of these companies maintain stores.

In several instances, the plants are near towns where the men live, and, in some cases, the employees secure housing accommodations of lessees of the companies.

Two companies charge \$30 per month for board and lodging in their hotels. Each room has two beds.

One of these companies also maintains a boarding house where the board costs \$20, \$22.50, or \$25 per month, depending on the quality of board desired. This company has forty bunkhouses, 12 feet by 14 feet, supplied with lights and cots, which are rented at fifty cents per man per month.

One of the above companies furnishes meals at 25 cents each, and makes no charge for use of iron beds and mattresses.

Employees, principally Greeks, at another cement plant, are housed in twelve whitewashed frame cabins, owned by an adjacent property owner. Three men occupy a cabin and pay \$1.50 each, per month. These cabins have two rooms, each 16 feet by 24 feet. Three men cook in one room and sleep in the other, which is furnished with cots and spring beds. The toilets were in an insanitary condition.

Family houses, occupied principally by Italians, are rented by this owner at \$5 to \$8 per month. A better class of houses, used mainly, by foremen, contain five or six rooms each. These are supplied with sanitary bathrooms and toilets. Water is furnished free, but an extra charge is made for electric lights. The yards have woodsheds and there is room also for gardens. These houses are principally occupied by Americans.

Near the quarry of this company, the old frame shacks were being torn down at the time of inspection, and three concrete structures containing eight rooms each, were being constructed. Groups of four men now occupy two rooms, using one for living and cooking purposes, and the other for sleeping quarters. These rooms are 12 feet by 15 feet in size. The men pay \$1.50 per month each, for room, and this includes water.

The hotel at this place burned down, and has never been replaced. It was operated by a lessee. A bathhouse, having two shower baths and sanitary toilets, has been completed since the survey was made.

On another portion of the property of this company, in the vicinity of the plant, the company has erected twenty houses for its employees, at a cost of \$25,000. These contain from four to six rooms each, and have baths and electric lights, and are equipped for hot and cold water. These rent at \$10 to \$14 each, per month.

Two private hotels in this vicinity, patronized principally by Italians, charge \$20 to \$25 per month for room and board.

Another company has a large Mexican camp, which occupies a little over four acres. The living quarters are contained in a continuous frame structure located on the outer boundary of the square plat of land. The living quarters occupied by single employees were 10 feet by 12 feet in size, with the gable eleven feet high, and the ceiling seven feet high at the two extreme ends of each of the rooms.

At the time of inspection, these rooms were supplied with four wooden bunks—two upper and two lower—on either side of each room. Instead of the usual wooden bottom for the bunks, wire screening was used. These bunks have since been removed, and single steel bunks installed in each room.

Each room has a water faucet for cold water but no washstand. The windows had wooden slides, 23 inches by 24 inches, without glass, at one end of each room, while at the other end of each room, a sliding window, 17 inches by 23 inches, containing four panes of glass, was placed.

There were sixty-six such rooms on the premises. This square was divided in half by a fence. The Mexican families reside on one side, while the single employees reside on the other. Only five families and twenty-five Mexicans were residing there at the time of inspection. Rooms were rented at the rate of fifty cents per man, per month, with electric lights (one) and water included. The lessee here charged fifty cents per man, per day, for board.

Twenty-two gardens, arranged for the use of the families, were located on their portion of the premises. Shower baths were located in rooms at each corner of this block, and were supplied with cold water only. The dining-rooms had screens on the windows, but the doors were not screened. Trees and vines have been planted on the premises and the place had been made as attractive as possible.

Not far away are two frame buildings, 20 feet by 100 feet in size. Each building has a room 20 feet by 60 feet equipped with ten steel bunks, for the use of the men, principally Austrians. Sanitary toilets

The feed ends of the tube mills where limestone is pulverized. These mills are 5 feet in diameter by 22 feet in length. They are flint lined and each mill carries twenty tons of flint or other pebbles. Piping at the left is used as air vent, as an experiment to prevent the cement dust from getting into the atmosphere.

and three cement washtubs are at each place. The Austrians pay \$1, every two weeks, for laundry work and housing.

Armenians, employed by this company, live in a city not far distant. An investigation of their living conditions showed that some of the unmarried men would cooperate in renting a house, or rent from a lessee. Two or three men were occupying each room and doing their cooking in a primitive manner, usually in the kitchen, or together in some other room of the house. Their diet was principally bread and meat, but fruit, butter, eggs and other ordinary necessities are bought by them only occasionally.

In this discussion of the housing and living conditions of foreigners, it should be borne in mind that they are desirous of living as economically as possible. For this reason, whether they get fifty or a hundred dollars or more, per month, many of them do their own cooking and other work, and purchase only the plainest of food, instead of patronizing boarding houses or hotels, like their fellow employees do, and where better living conditions prevail.

Two companies have recently completed first class emergency hospitals, fully equipped, constructed of cement, and each costing about \$10,000, without the equipment. They are a credit to the plants where they are located.

The plants are operated throughout the year, depending on business conditions, and they average around three hundred working days, each, per year.

The process of making cement has been aptly described as the "grinding of a mixture of limestone and clay together to a fine powder and heating this mixture to incipient fusion; this partly fused mixture when ground to a flour and mixed with a retarder, forms Portland cement."

The raw materials used are chiefly limestone, clay, shale and gypsum. The limestone from the quarries, and the clay from clay pits, are conveyed by cars to the plants and are placed in separate bins.

The general mode of cement manufacture in the various mills is essentially the same. The operations are divided into two departments, *i. e.*, the "raw" mill, and the "finishing" mill.

In the "raw" mill, the ingredients pass through the crushers, ball mills, tube mills, and into kilns where the heated mixture is brought to incipient fusion, which forms a "clinker."

After cooling on the clinker pile, in the open air, this clinker is conveyed into the "finishing" mill, where it is reground by ball mills, and tube mills, gypsum is added as a retarder, and then the product, as cement, is ready for the packing machines which are used to sack the cement.

In one representative plant in California, the cars containing the limestone from the quarry are run over track scales to check the gross

tonnage. The cars are then dumped and the limestone discharged into two No. 6 Gates gyratory crushers operated by one 150-horsepower motor. This constitutes the second reduction, the first reduction having been completed in the crusher at the quarry.

The two crushers are arranged so as to discharge their product on to one twenty-four inch 15 degree inclined belt, 200-foot centers, which conveys the product into a rock storage capable of holding 16,000 tons. Three belts with three Robins automatic trippers serve to distribute the crushed limestone over the rock-storage area. By means of a system of tunnels and belting, the limestone is drawn out from underneath the rock storage onto a cross belt into two six by sixty-foot dryers. From the discharge end of the dryers, the limestone is elevated into a bucket conveyor, which delivers the material into the ball mill bins. All the bins are of a steel, hopper type of construction. At the same time, the clay and shale is dried through similar dryers, and their discharge delivered into the ball mill bins.

A third reduction is accomplished through eleven Gates No. 8 ball mills for limestone, clay and shale, each of which is ground separately and their product elevated and conveyed into separate bins: six for limestone, and three, each of a different capacity, for clay and shale. Automatic samplers are arranged for sampling each of the three raw materials while their respective bins are filling. When these samples are analyzed and a raw composition formulated in the laboratory, the three separate materials are drawn out simultaneously into a battery of three automatic weighing machines, which again simultaneously discharge into a huge double-screw-cut flight mixer. From the mixer, the raw composition is elevated and conveyed into the tube mill bins.

The tube mills, giving the final grinding to the raw composition, are of the Gates five and one half foot by twenty-two foot type and are fourteen in number, operated in pairs by a 250-horsepower Westinghouse motor. The tube mill product, 73 per cent of which passes a 200-mesh screen, is discharged into one long continuous screw conveyor, where the raw composition is again automatically sampled and checked from the laboratory. The raw composition is then elevated and conveyed to the kiln bins.

In the kiln-room are twenty-four $7\frac{1}{2}$ foot by 7 foot by 125 foot kilns, which lie on an incline of a three fourths of an inch pitch, and are individually operated by a 30-horsepower speed motor, with a controller at the burner end of the kilns. Each kiln is provided with a stack, five feet by eighty feet, at the far end of the kiln. Fourteen of the kilns are now in daily operation, each of which easily produces its 500 barrels of clinkers in twenty-four hours.

The raw composition is fed into the stack end of the kiln by means of screw conveyors from the hopper base of the kiln bins, which, under

the rotation of the kiln, is carried onward and downward through the heat zone, where it is calcined to incipient fusion and discharges into a pit as clinker. The burning is accomplished with crude oil and compressed air. The oil is of 17 degrees Beaumé gravity and the air pressure is eighty pounds at the burner. Approximately 2,000 barrels of oil are consumed per day.

From the clinker pit the clinker is delivered into coolers, which finally discharge into a portable steel skip on a narrow gauge track, to be taken to an open air clinker storage.

The clinker now in the steel skips, which hold thirty barrels, is delivered to the clinker storage pile. One of the chief assets to a cement plant lies in a large clinker storage. It not only gives the plant flexibility, but gives an aging to the clinker which favorably affects its quality as well as the final grinding. The clinker storage at this plant covers an area of 80,000 square feet, on which approximately 500,000 barrels of clinker can be stored.

The clinker storage has fourteen tunnels underneath into which the clinker is drawn through chutes directly onto belts which convey the clinker to a cross belt running into the finishing mill.

In the "finishing" mill, the clinker is received in a steel bin directly over the stack end of the dryer, provided with an adjustable rocker feed, which delivers the clinker into the dryer. While the clinker passes through the dryer a low heat is applied, when necessary, to drive off any water absorbed by the clinker through rains or damp atmosphere, thereby avoiding any clogging of the ball mill screens. To retard the setting time of the cement, about $2\frac{1}{2}$ per cent of gypsum is added in the dryer discharge pit from a bin controlled by an adjustable rocker feed.

The gypsum is fed into the pit by a continuous belt, which delivers a continuous stream simultaneously with the clinker stream discharged from the dryer. This assures a thorough distribution of the gypsum and a well regulated setting time of the cement.

From the dryer discharge pit the stream of combined clinker and gypsum is elevated and conveyed into the ball mill bins. Through the hopper of the bins the material is fed into the ball mills, eighteen in number, similar in type and size to those in the raw mill building. From the ball mill discharge, the stream passes through elevators and conveyors into the tube mill bins. From these bins the material passes on into the tube mills for its final grinding. The tube mill installation consists of twenty-four mills, twenty of which are in constant operation. The tube mill product, which is the cement, is an impalpable powder, 80 per cent of which passes a 200-mesh screen. The product is elevated and automatically sampled while conveyed into a large stockhouse.

A view of a kiln room where the pulverized mixture is reduced to a "clinker." The kilns are eight feet in diameter. Ten of them are 100 feet long, while two are 120 feet in length.

The stockhouse, which consists of ten separate bins, is of concrete construction throughout, and has a capacity of 128,000 barrels of cement. The base is of the hopper and tunnel-type construction, two of which run longitudinally through the entire length of the stockhouse. By means of screw conveyors, the cement is conveyed through these tunnels into the packing bins, adjacent to the stockhouse. Eight Howe packing machines mechanically fill the sacks, which are carefully weighed and tied and passed on trucks into cars.*

A portion of every plant is devoted to the receiving, cleaning, counting, patching, repairing, and storage of returned cement sacks, and this place is referred to as the "bag house."

The cleaning of sacks is generally done by revolving a number of them in a cylinder, which is operated in a closed room. The slatted perimeter allows the cleanings to drop through to the floor. The bags are removed from the cleaner through a door provided in one section of the slats. No one remains in this closed room during the operation of cleaning the sacks.

It is evident that in a manufacturing process, which produces a pulverized mineral product, as cement, there is likely to be a leakage at various stages of the operation. The result of this leakage is that dust is distributed throughout the plant, while the air becomes heavily charged with the most minute particles.

The siliceous character of the limestone necessitates the use of metal machinery and containers to withstand the constant friction. In none of the plants were the metal conveyors, or the machinery, boxed in with lumber to restrict the dissemination of dust. Such a procedure would tend to precipitate and control much of the dust; to prevent its dissemination, and to admit of its removal as required.

The kiln rooms were affected the least, and the grinding, packing, and bag cleaning rooms the most, by the leakage of dust, though comparisons are difficult to make when dust is found everywhere.

The dust problem is a mechanical difficulty, which varies with the individual plants—their machinery, mode of operation and construction arrangement.

One plant was walled off longitudinally, dividing the building into zones, in each of which a particular process was performed. The intent, and the result, of this plan was to retain in each department, the dust which was disseminated there by leakage from machinery.

In no plant was vacuum apparatus or any other dust collecting machinery used to eliminate or to dispose of the dust.

One plant had, however, installed a dust collecting plant at an expense of \$10,000, but it failed to operate satisfactorily.

*Llewellyn T. Bachman, "Cement and Engineering News," March, 1913.

Regarding the dust problem in English cement plants, it is stated that:

Provision is made in well-arranged works for the withdrawal and collection of the suspended dust, which was formerly so objectionable a characteristic of cement works, leading not only to unhealthy conditions within the buildings, but poisoning and disfiguring the whole neighborhood in which the industry was carried on.

By the aid of exhaust fans and dust-collecting apparatus, the air is now kept free from dust, and a considerable quantity of cement, which was formerly wasted, is now saved to the manufacturer.*

Most of the superintendents have been engaged in manufacturing cement for many years, and their experience has convinced them that, generally speaking, cement dust is harmless to employees. Acting on this theory, it is not remarkable that they have done so little to reduce the dust problem to a minimum.

One manager submitted the following statement of the term of service of some of his employees, for the purpose of showing their preference for, and their ability to perform, the work required in this industry.

For your information, we give the actual time of service of our employees in the packing house and bag house, as follows:

Place of Work	Years of service of employees								
	0-1	1-2	2-3	3-4	4-5	5-6	6-7	7-8	Total
Packing house -----	3	5	8	5	3	2		3	29
Bag house -----	3	1	4	5					13

The following figures show employees' time of service on the job, and do not necessarily mean the length of their service in the respective departments:

Place of work	Years of service of employees									
	0-1	1-2	2-3	3-4	4-5	5-6	6-7	7-8	8-9	Total
Office -----				2	1	5				8
Laboratory—physical and chemical -----	4		1	1	2			2		10
Quarry -----	28	50	7	24	8	11	6	3		137
Raw mill -----	3	2	1	5	6	4	5	8	2	36
Kiln room -----	4	2	1	3	4	4	1	4		23
Finishing mill -----	3		1	4	1	4		4	1	18
Packing house -----		5	7	5	2	5	2	4		30
Bag cleaning -----		2	6	4			1			13
Compressor room -----	1	1		1	1					4
Boiler house -----	1				1					2
Repairmen -----	8	1		1	4		1	1	1	17
Shopmen -----	2		2	1	1	1	1	1		9
Electricians -----				1		1		2		4
Carpenters -----		3	1	2	1	1				8
Yard crew -----	10	5		4	2		1	1	1	24
Clay quarry -----	1		1				1			3
Steam shovel -----	11	4	2	3	2	2	1			25
Railroad -----			1			2	1	3		7
Section crew -----		3	2	1			1			7
Totals -----	76	78	33	62	36	40	22	33	5	385

*C. H. Desch, "The Chemistry of Cement," p. 32.

Driving gear of rotary kiln showing cover protection placed over cog wheels. Part of the "safety" campaign of one of the cement companies.

Driving gear of a rotary kiln, with cover removed from cog wheels, showing danger to employees.

The above figures show that of a total of three hundred eighty-five men on the pay roll of this company, a large proportion of them had remained with the company for many years.

Of the men who had left this factory, some had gone to other plants to continue with the same line of work; others had made their "stake," and had gone into farming, or business, or had returned to their native land.

Though the mill men do not work as hard as those outside, they have longer hours and receive proportionately more wages.

It is difficult to secure Americans to remain in some of the occupations in the mills, and therefore foreigners are greatly in the majority.

These are principally Italians, Greeks, and Armenians. They live as economically as possible, and either send their wages home, or return when they have accumulated enough to enable them to live there comfortably.

One manager reported that Greeks are prone to retain their brass identification checks when returning to Europe, and give them to friends, who bring the checks back in the expectation of securing the vacant positions, or a chance to work elsewhere about the plant.

Much data on the personal habits of the foreigners employed in this industry was obtained, which indicates that their standards of living are far below what they should be.

Since the beginning of the agitation regarding cement dust, several of the companies require their physicians to make physical examinations of the employees in order to reject those who are unsuited to the work, and at different times to note the effect, if any, of the work and dust upon them.

Records of these examinations are made, and the doctors are thereby enabled to report more intelligently upon the physical effects of the industry on the workers than they could heretofore.

Several company doctors reject applicants who have any defect in their nasal passages, or have bronchitis, or lung trouble. They now pass, as a rule, none but sound men between the ages of twenty-one and fifty years.

One doctor resides in a cement company town, though all the companies have retained doctors who live within convenient access of the plants.

The dust problem in its relation to the health of the employees, may be considered from several standpoints as follows:

1. *Bacteriological.* When the finely ground mixture of limestone and clay is brought to incipient fusion in the kilns, the temperature registered there, by pyrometers, ranges from 2,700° F. to 3,500° F.

Any organic material is broken down chemically, and any bacteria would, of course, be destroyed.

Bacteria that might be found in the finished Portland cement would be acquired while the clinker is on the clinker pile, or subsequent thereto, during the regrinding operations. It is very improbable that any bacteria would be thus combined with the cement.

Respirators are seldom used and then only by packing and bag house employees. It is possible that their continued use, without being cleaned or sterilized, affords a greater menace to the health from bacteria exhaled with the breath and lodged in them, than the sterilized cement dust does.

2. *Chemical.* Analyses of American Portland cements indicate some variations in the proportion of their constituents, and the following table gives some representative determinations:

Analysis of American Portland Cements.*

Elements	Percentages of composition						
	I.	II.	III.	IV.	V.	VI.	VII.
SiO ₂ -----	21.99	20.75	20.88	21.61	23.25	22.14	22.47
Al ₂ O ₃ -----	7.24	7.72	7.91	7.88	5.32	7.32	6.94

SO ₃ -----	1.19	1.66	1.46	1.52	1.32	1.58	1.67
Undetermined -----	1.29	1.92	1.23	0.88	0.69	1.97	2.48
Totals -----	100.00	100.00	100.00	100.00	100.00	100.00	100.00

*Bulletin No. 331, U. S. Geol. Survey, 1908.

Any injurious effects from the mineral elements above enumerated would be dependent upon their chemical or mechanical action on the men.

At one plant, a notice is posted requesting employees to wash their hands before eating. The inference is that cement dust, absorbed with food, would be injurious to the men, causing intestinal and other troubles.

3. *Fumes.* These are expelled from the kilns, through chimneys, during the process of incipient fusion in the formation of clinker. Several companies have been defendants in lawsuits instituted by owners of adjacent property, who alleged that the fumes were injurious to crops.

In order to overcome such objections, two companies have, at considerable expense, installed dust collectors, or fume houses, in connection with the chimneys, at their plants. Here the dust and fumes are treated by different processes in order to minimize their injurious effects upon the neighborhood.

Fumes ordinarily contain sulphur trioxide (SO_3), carbon dioxide (CO_2), and carbon monoxide (CO), in varying quantities. The action of the first named is well illustrated when it comes in contact with barbed wire fences, or other iron surfaces, in the presence of moisture, as it corrodes the metal. Any of these fumes, in quantity, are injurious to human beings.

4. *Mechanical.* The dust, which is distributed throughout the plants, varies in size from that which will pass through a 200 mesh screen to that of larger size. At one plant the chemist stated that 96 per cent of the cement would pass a 100 mesh screen, while 84 per cent would pass a 200 mesh screen.

The dust may be an impalpable powder, or larger and somewhat angular in shape. In the latter form it is more irritating, as it causes an abrasion of the skin and mucuous membranes. The heavier granular particles are precipitated more quickly than the lighter ones.

In the packing-rooms, particularly, the atmosphere is charged with cement dust. This is due to mechanical defects in the machinery; the lack of effective boxing around conveyors and machinery, and the modus operandi of the packing and tying operations.

Occasionally cement dust lodges in the eyes, causing conjunctivitis. The doctors uniformly state that the number of office visits of employees due to dust troubles is very small, and they are not aware of any disease that is peculiar to this industry. It is claimed that cement dust will quickly cure a cold in the head—presumably because of its strong affinity for moisture.

When inhaled in the nasal passages, the dust is irritating and annoying to many people. It may penetrate into the clothing or shoes and cause skin irritation. For this reason packers and truckers often bind up their shoes with gunny sacking while employed in the packing departments.

With reference to the effects of cement dust on employees, an English government publication states as follows:

Investigations by Dr. Heim, of Paris, and by the Factory Department of the Home Office, made two or three years ago, have also shown that men engaged in the manufacture of plaster of Paris and cement are free from any excessive incidence of phthisis.

We may also refer to a valuable paper read by Dr. Collis at the XVIIth International Congress of Medicine, London, 1913, on "The effects of dust in producing diseases of the lungs," in which the whole subject is summarized.

The investigations briefly summarized above, while indicating that dust inhalation predisposes to respiratory diseases, the mortality from which may attain terrible proportions, show certain unexpected exceptions, notably in the case of slate miners and of men employed in the manufacture of cement and of plaster of Paris. Evidence, however, has been placed before us which by indicating one, and probably the most important injurious element in dust, will, we consider, materially assist in the prevention of mortality from pneumoconiosis.

It is desirable to explain by what steps this element has been isolated. The term, pneumoconiosis or dustlung, is used to describe the damage caused to lungs by dust inhalation; this damage may manifest itself in various diseases, such as phthisis, asthma, pleurisy, chronic pneumonia, or bronchitis. These diseases occur in the general population, and difficulty, therefore, arises in establishing for each individual case the predisposing influence of occupation; and we feel confident that if this influence could have been demonstrated with the same certainty as in the case of lead poisoning among workers who manipulate materials containing lead, of anthrax among wool sorters, and of other such specific occupational diseases, the existence of this widely distributed evil would have been ere now recognized and dealt with. Of these diseases, as regards men employed in metalliferous mines and quarries, phthisis or consumption is the most important. Other diseases of the lungs appear always to occur in excess among those who suffer a heavy mortality from phthisis induced by dust inhalation, and such diseases may also be unduly prevalent even when an excessive death rate from phthisis is absent, as, for example, pneumonia among slate-workers whose death rate from phthisis is low. No relation, however, has yet been established between such forms of pneumoconiosis, as e. g., pneumonia, asthma, and bronchitis, and the inhalation of particular forms of dust.

For our present purpose phthisis mortality may usefully be taken as the comparative index of the injury dust causes, at least among those employed in metalliferous mines and quarries, regard being had to the fact that the figures which express the mortality from phthisis do not express the total mortality in these industries from pneumoconiosis.

The sequence of events which follows inhalation of injurious dust—the formation of fibrous tissue in the lungs which lose their spongy texture and become tough and inefficient organs for aeration of the blood; the rise in blood pressure requisite to drive the blood through this toughened tissue; the impaired chest expansion, showing itself as breathlessness and asthma; the characteristic abdominal breathing; and the sudden alteration for the worse in the clinical aspect when the tubercle bacillus gains access to such a damaged lung—has been carefully described in the works already quoted, and, though placed in evidence before us, particularly in respect to the physical condition and clinical aspect of operatives employed in grinding metals and in granite cutting, requires no restatement here. We need only repeat the words of Dr. Haldane, "I believe the disease is the same all over the world, and the end comes through tubercular infection." The statistical evidence we have considered, however, confirms certain points alluded to by early observers, which may be stated in the following deductions: If in any given class a high death rate from pulmonary tuberculosis is found occurring at a later period of life than is usual for pulmonary tuberculosis, and if this high death rate is associated with a high death rate from other respiratory diseases, then this class is exposed to the inhalation of injurious dust; and, further, pulmonary tuberculosis occurring in such a class does not exhibit the same incidence on the wives and families of those affected, as is characteristic of ordinary pulmonary tuberculosis.

Early in our inquiry Dr. Haldane, when summarizing the results of his inquiries into miners' phthisis in Cornwall, drew attention to the fact that all dusts are not equally dangerous, but that some, such as quartz dust from Transvaal gold mines, dust from Cornish mines, from ganister, from some sandstones, e. g., Craigleith stone, are certainly injurious; and he said, "We ought to know what the qualities are in dust which make it dangerous, so that we may be able to say with regard to any dust offhand whether that dust is dangerous or not. * * * There is a great gap in our knowledge as regards these points. There is a lot of knowledge about points which are not of much practical importance, but not knowledge such as would be of assistance to this Commission, or to the Home Office Factory Department in dealing with different sorts of dust."

The marked differences in the phthisis mortality in various dusty industries which is shown in the above table induced us to ask Professor Beattie, who had, at Sheffield University, already interested himself in the subject, to carry out certain experiments by exposing animals to atmospheres containing various kinds of dust. After

varying periods of exposure to dusts suspected to be dangerous in view of the phthisis mortality statistics among those who work in them, the animals, guinea-pigs, were found to develop a fibrous condition of the lungs similar to that found in the lungs of operatives who inhale these dusts, but exposure to dust thought to be innocent because no excess of phthisis is found in those who are exposed to their inhalation, either did not cause this condition to develop or only to a moderate degree. Professor Beattie found, however, a few exceptions which call for further investigation.

The general results of his inquiry may be thus stated: Certain mineral dusts, such as e. g., coal, clay, cement, were not shown by experiments to be injurious. Others, e. g., silica dusts, quartz, flint, sandstone, are dangerous, as are also carborundum and emery. The line of inquiry which Professor Beattie pursued is practically new, and many difficulties had to be surmounted, but the results he obtained agree in a striking manner with the deductions drawn from the mortality statistics and materially assisted us in determining the injurious element in dust.

Practically every investigator of the cause of pneumoconiosis has remarked upon the injurious character of siliceous dust, but the mortality data for slate workers, for brick, plain tile, and terra cotta makers, and for cement workers indicate that silicon, in the form of silicates, may be present in dust without any increase in the phthisis death rate, among those exposed to its inhalation. Further reflection, however, indicates that, when the phthisis death rate is considered in relation to the presence of free crystalline silica in dust an intimate connection is found to exist—that, in every case where an excessive phthisis mortality has been found among those exposed to dust inhalation, this substance is present in the dust, and conversely, that among workers exposed to dust which does not contain this substance no such excessive mortality from phthisis has been found. No evidence has been placed before us which suggests any other explanation of the presence or absence of excessive phthisis mortality among those exposed to dust inhalation. After careful consideration, therefore, we feel justified in concluding that, even though further investigation should disclose other dusts as dangerous, the dust of free crystalline silica is specially injurious and is the most potent cause of fibrosis.

We are further of opinion that inorganic dusts may be grouped in two classes—

- (1) Dusts, the inhalation of which has not so far been shown to be associated with any marked increased mortality from respiratory diseases; to this class belong coal, shale, slate, iron ore, clay, limestone, plaster of paris, and cement.
- (2) Dusts, the inhalation of which is associated with excessive mortality from respiratory diseases and especially from phthisis; to this class belong quartz, quartzite (*i. e.*, ganister and buhrstone), flint, and sandstone.

We desire, however, to make clear that this classification of dusts refers only to mortality from phthisis experienced by those exposed to their inhalation and takes no cognizance of other injurious qualities dust may possess.

It appears to be the opinion of the most competent authorities that all dust is more or less detrimental to health, though in point of injuriousness there is no comparison between the less dangerous and the more dangerous kinds of dust. Exposure, however, to the inhalation of dust in confined places, where it is likely to be concentrated, even when the dust is of the less injurious character, is always liable to be prejudicial.”*

“NOTE.—See article on “Respirators,” on page 193 of this report.”

The scene of greatest activity—and of clouds of dust—is the packing-room. It is an interesting sight to witness the mechanical operations of the battery of machines, and the endeavors of each crew to make a record “run,” and to excel the others.

*“Second Report of the Royal Commission on Metalliferous Mines and Quarries, 1914,” pp. 140 and 144. Published by Eyre and Spottiswoode, Ltd., East Harding street, E. C., London. Price, 1s 9d.

End view of No. 8 Gates ball mills used in the finishing mills to pulverize clinker to cement. They are six feet wide by eight feet in diameter.

Interior of bag house showing exterior of the room containing revolving drum where 40,000 sacks may be cleaned daily.

Two makes of packing machines are used in the seven California Portland cement plants now operating, i. e., (a) the "Howe," and (b) the "Bates."

(a) The Howe packing machines have been used in all the plants for years. They require one operator to change the sacks; another man ties them, while a third, or a fourth man, in the crew, are busily engaged in trucking and loading the sacks into the freight cars or the warehouse. These men alternate in performing the various operations, and, as the machines vary in effectiveness, the crews rotate in using them.

A crew at one plant was credited with the ability to fill and truck 3,024 sacks of cement per day, though a fair average was 2,400 sacks per machine, or 600 barrels, per crew, per day. Each sack weighs 95 pounds, and four sacks equal one barrel. On a basis of 2,400 sacks, a day's work would involve handling 114 tons of cement.

As before stated, this work is paid on a contract basis, and the men earn on an average between three dollars and five dollars and a half for ten hours work per day. The contract earnings of a crew during a month are divided equally by them, as they have rotated in performing the various operations.

(b) The Bates machines have been recently installed in several plants in this state. They require one man to operate the simultaneous filling of four sacks. These sacks are placed on weighing machines, which, at the proper weight, automatically stop the flow of cement into the sacks. When filled, the sacks are tilted onto a revolving belt conveyor that transfers them into the freight car outside or to the warehouse.

With the Howe machines, the cement sacks are tied *after* being filled, while with the Bates machine, the sacks are tied *first* and filled afterward.

The end of a small pipe is placed through an aperture in a corner of the bottom of the sack, and the cement is allowed to flow through until the desired weight is obtained.

The pressure of the cement in the sack against the flap over the aperture serves to keep the cement confined in the sack when it is reversed in position.

This work is usually paid for on a day basis. The work around the mills is on a ten hour basis, and is paid for by the day or hour.

The superintendents report that this outside work is much harder than that in the mills. In consequence of this, the men seek work in the mills, where two twelve hour shifts are operated.

As the hours are longer in the mills, the men receive proportionately, more wages than when working outside.

The following data will convey some idea of the scale of wages paid in representative occupations in the several departments of the various plants operating in California:

Rates of Wages Paid in the Cement Industry in California.

¹On contract basis.

²General foreman, or superintendent.

³Three men are in a crew. Contract basis is sixty cents per man per 100 barrels. One barrel equals four sacks or three hundred eighty pounds. These men work seven hours, on an average, per day, and earn from \$3 for seven hours' work, to as high as \$5.40 for nine hours' work.

⁴Three men are in a crew. They receive two cents per barrel, and earn, on an average, \$3 per day of ten hours.

⁵Twenty-one men handled 899,102 sacks in one month, for which they receive \$0.001875 per sack. The sum of \$1,685.85 was divided between them, making their average earnings, that month, the sum of \$80.28.

⁶Three men are in a crew. They receive two cents per barrel and average around \$3.50 per day of eight hours.

⁷Five men are in a crew. Their earnings average around \$100 per month.

⁸Three men are in a crew. They receive two and a quarter cents per barrel.

This contract work includes the filling, tying, trucking, and loading of the sacks of cement.

Where the time schedules of the various plants vary from the number of hours as here given, the rates of wages have been adjusted accordingly.

In the report of the Industrial Accident Commission for the year 1913, the number of accidents in the various plants and quarries of the Portland cement companies, is included under "Quarries" with the

Packing house employees shown operating with Howe packing machines. This is the dustiest operation in the process of cement manufacture.

View of sack stacker used in piling sacks in warehouses. A motor is located under the stacker.

number which occurred in the other quarries throughout the state. These other quarries are engaged in the production of clay, marble, limestone, crushed rock, gravel, etc.

The total number of accidents thus reported, for the year 1913, was eighteen men killed, thirteen permanently injured, and one hundred thirty-eight incapacitated for work for periods exceeding seven days each.

Of this showing, an analysis of the original records of the Commission, discloses the fact that it is impossible, from the data, as found there, to definitely fix the location of the various accidents, in all cases. However, the following tabulation is offered, showing a division of these accidents between the mills, the quarries, and the outside, general, or unclassified accidents.

Distribution of Accidents in the Cement Industry.

Company	Character of accidents								
	Deaths			Permanent			Temporary		
	M.	Q.	O.	M.	Q.	O.	M.	Q.	O.
A -----		2	1		1	1	4	3	9
B -----	2								3
C -----									
D ² -----	1		1	1			3	7	11
E -----		¹ 11					4	4	1
F -----							3	12	12
G -----		2					5	3	1
Totals -----	3	15	2	1	1	1	19	29	37

¹Of this number, ten quarrymen were killed outright, at the same time and place, due, as reported, to a premature explosion. The other employee was similarly killed at a different time.

²Including various quarries operated by it.

This table shows a total number of accidents, strictly chargeable to the Portland cement industry, of twenty men killed, three permanently injured, and eighty-five incapacitated for work for periods exceeding seven days each.

While the 1913 report of the Commission shows a total of eighteen men killed, the cases of two others which occurred in 1913 were not "closed" when the report was made, and were not included in it, but are included in this tabulation.

It is thus shown that of the total number of accidents charged to "Quarries," only the foregoing figures apply to the Portland cement industry, while ten employees, in other industries, were permanently injured and fifty-three were incapacitated for periods exceeding seven days each.

It has been generally recognized that mining, quarrying, and other work involving the manufacturing or handling of explosives, rank

highest in the number of accidents in comparison with the number of employees exposed to such hazards.

It is not apparent though that the occupations in the cement mills involve the hazards incidental to quarrying.

On the contrary, the foregoing figures show that a large proportion of the non-fatal accidents do not occur in the mills, but are chargeable to quarry and other work performed outside of the cement mills.

In the matter of accident prevention, several companies have taken an advanced and commendable stand. One company has instructed its foremen to send any employee to the office if he has a disposition to endanger himself; if indifferent to his work; if found to have poor sight, hearing, or health, or is intemperate, and he is thereupon discharged. This company employed a force of eight carpenters to go over their plant and install such guards as were requisite to prevent accidents.

In furtherance of the "safety first" policy of this company, a committee meets every Monday night to discuss matters of safety. These are discussed first, and later the matter of efficiency in the mill is considered. In its quarry, this company has placed houses where the employees may find protection during the operation of blasting.

Further instances might be cited, but these will serve to show that the important matter of accident prevention has not been entirely disregarded or overlooked by several companies.

In pursuance of a law passed by the last legislature this Bureau undertook, this year, a compilation of statistics of the various manufacturing industries in California.

Blank forms, similar to those used in reporting to the United States Bureau of the Census, were delivered to all cement companies.

The negligence, or refusal, of several companies to supply desired information, prevents this Bureau from reporting on the total amount of capital invested in this industry; the value of material used, and the value of product.

This is to be regretted, since it prevents a proper presentation of the importance of this growing industry. Tables showing wages, and number employed, are given under "Manufactures," elsewhere in this volume.

The legal limitations, on this Bureau, prevent the publication of the names of individuals, firms, or corporations supplying such information as that on which this and other reports of the Bureau are based.

For this reason, this report purposely omits the names of the several companies, and leaves the reader to consider the subject in an impersonal manner.

The Bureau takes this opportunity to acknowledge the uniform courtesy extended to its representative, by the various gentlemen connected

A new hospital, in a beautiful setting of concrete construction, costing \$10,000. It has a complete equipment, and is available for emergency use.

with this industry, whom he had occasion to meet in making the required investigations.

Beyond two magazine articles describing two different plants, and a brief narration of the history of this industry, the subject of the Portland cement industry in California has not received the publicity which its importance deserves.

Such data as is accessible is contained in various government reports, as the annual reports of mineral production, issued by the California State Mining Bureau; occasional bulletins of the United States Geological Survey, and the Census Reports. Copies of the following publications may be obtained upon application to The Director, United States Geological Survey, Washington, D. C.:

Pamphlet "g," Part II, Mineral Resources of the United States, 1910-1911. "Cement: Portland cement materials and industry of the United States; map of the United States showing distribution of cement plants and principal limestone formations."

Pamphlet 9, Part II, Mineral Resources of the United States, 1913. "The cement industry in the United States."

Copies of the annual state reports on mineral production may be secured upon application to the State Mineralogist, Ferry Building, San Francisco. Statistics, from the annual report for 1913, have been presented in the first portion of this review of the industry.

On the subject of the cement industry in the United States, the reports of the Thirteenth Census, based on returns for the year 1909, state as follows:

This industry consists chiefly in the manufacture of Portland cement from rock usually quarried by the same establishments.

In the following comparative table no figures are presented for the censuses of 1879, 1889, and 1899, as in the published reports for these years the data for the manufacture of cement were included with those for the manufacture of lime under the classification of "lime and cement."

Comparative Statistics of the Portland Cement Industry.

Year	Number of establishments	Wage earners (average number)	Wages	Cost of materials	Value of products	Value added by manufacture
1909 -----	135	26,775	\$15,319,662	\$29,343,791	\$63,205,455	\$33,861,664
1904 -----	129	17,478	8,814,077	12,215,113	29,873,122	17,658,009
1869 -----	45	1,632	631,993	773,192	2,033,893	1,260,701
1859 -----	14	740	206,460	262,920	767,080	504,160
1849 -----	35	407	117,924	238,157	509,110	270,953
California—						
1904 -----	4	596	236,000	664,000	1,601,000	937,000
1909 -----	8	2,407	1,650,000	2,182,000	6,504,000	4,322,000

Comparatively little natural cement was made in 1909 and a still smaller quantity of puzzolan cement. The former is an argillaceous limestone calcined and ground; the latter a ground mixture of blast furnace slag and slaked lime. The hydraulic cement called Portland cement is a calcined and ground mixture of limestone, chalk or marle and clay or shale.

A view of a ward in one of these hospitals.

The operating room in this hospital.

The statistics of products for the cement industry for 1909 and 1904, given in the following table, show a total value of \$63,205,455 in 1909 as compared with \$29,873,122 in 1904, the rate of increase for the five year period being 111.6 per cent. In 1899, the statistics for the lime and cement industries were combined, the products aggregating \$28,673,735 in value. The value of the combined lime and cement product in 1909 was \$81,157,442, the increase for the decade being 183 per cent.

During the period 1904-1909 the output of cement increased 110.5 per cent in quantity, all of the increase being in Portland cement, while the output of natural cement and of puzzolan cement decreased greatly. Portland cement formed 97.5 per cent of total in 1909, as compared with 83.7 per cent in 1904.

Comparative Table of Cement Production, by Years.

Product	1909	1904
Total value -----	\$63,205,455	\$29,873,122
Cement:		
Barrels -----	66,689,715	31,675,257
Value -----	\$53,610,563	\$26,031,920
Portland—		
Barrels -----	64,991,431	26,505,881
Value -----	\$52,858,354	\$23,355,119
Natural—		
Barrels -----	1,537,638	4,866,331
Value -----	\$652,756	\$2,450,150
Puzzolan—		
Barrels -----	160,646	303,045
Value -----	\$99,453	\$226,651
All other products -----	\$9,594,892	\$3,841,202
California—		
Barrels -----	3,779,205	969,538
Value -----	\$4,969,437	\$1,539,807

The statistics of the production of cement were collected in cooperation with the United States Geological Survey, which compiles annual statistics for the industry and reports the value of the cement in bulk, exclusive of the value of the barrels and bags used as containers. In order to make the census figures agree with those of the survey, the value of the cement in bulk is given here, and the value of the containers used is included in the total for "All other products," which also covers crushed rock sold as such, marble dust, and mixed ashes and cement. The census does not purport to furnish figures that can be used for determining the cost of manufacture and profits.

At the present time (1914), there are no Portland cement plants in Nevada; two plants in Oregon are not completed, and but one small plant is located in Arizona. This commercial territory is supplied with cement from Utah and Washington, as well as by the California companies.

The three Portland cement plants now operating in southern California have a rated daily capacity of about 9,000 barrels, while the four plants in the vicinity of San Francisco are credited with a capacity of about 18,750 barrels. The five cement plants in Washington have a rated daily capacity of 9,100 barrels. Several cement plants are also operating, at the present time, in western British Columbia.

In this connection, the possibility of eastern competition, due to low cost of production and cheap freight rates via the Panama Canal, may have some influence on the future of this industry on the Pacific coast.

A solid concrete hospital, with concrete roof, costing \$10,000. It is completely equipped and always ready for emergency use.

With the increasing utilization of cement in the construction of highways, buildings, power plants, railroads, and for other purposes, as indicated by the foregoing summaries of state and federal statistics, this industry in California appears to be destined to have a steady growth in its industrial and financial importance.

PART III.

ORGANIZED LABOR.

In this chapter are presented figures showing the rates of wages and hours of labor on January 1, 1914, in some 494 unions of the state. There is also indicated by footnotes changes in wages and hours made in the two years, January 1, 1912, to January 1, 1914, and of which we were able to obtain record.

The number of unions reporting does not, of course, represent all the labor organizations in the state. It does represent, however, an appreciable increase over the number covered in our last biennial report, where figures were shown for January 1, 1912.

We have continued the classification adopted in the previous biennial report. This classification is as follows:

CLASSIFICATION OF LABOR ORGANIZATIONS.

- I. BUILDING, STONE WORKING, ETC.
 - Stone working.
 - Building and paving trades.
 - Building and street labor.
- II. TRANSPORTATION.
 - Railways.
 - Navigation.
 - Teaming and cab driving.
 - Freight handling.
 - Telegraphs.
- III. CLOTHING AND TEXTILES.
 - Garments.
 - Shirts, collars and laundry.
 - Hats, caps and furs.
 - Boots, shoes and gloves.
 - Textiles.
- IV. METALS, MACHINERY AND SHIPBUILDING.
 - Iron and steel.
 - Other metals.
 - Shipbuilding.
- V. PRINTING, BINDING, ETC.
- VI. WOOD WORKING AND FURNITURE.
- VII. FOOD AND LIQUORS.
 - Food products.
 - Beverages.
- VIII. THEATERS AND MUSIC.
- IX. TOBACCO.

X. RESTAURANTS, TRADE, ETC.

Hotels and restaurants.
Barbering.
Retail trade.

XI. PUBLIC EMPLOYMENT.

XII. STATIONERY ENGINEMEN.

XIII. MISCELLANEOUS.

Paper and paper goods.
Leather and leather goods.
Glass and glassware.
Cement and clay products.
Other distinct trades.
Mixed employment.

ORGANIZED LABOR.

\$In railroad train service wages are usually paid by the mile or trip and working time is either not specified at all or is fixed only to the extent of a stipulation that a certain number of miles or trips shall be regarded as a "day's work." The word "day" in connection with these trades, therefore, is used only in a technical sense, being equivalent to the number of miles or trips ordinarily made in a calendar day or stipulated as a "day's" work by agreement.

MANUFACTURES.

In this chapter we present for the first time the attempt by this bureau to take a census of manufactures in this state. While our information is not complete, we feel that a great deal has been accomplished in starting this work, the value of which will be apparent to every one interested in the industrial affairs of this state.

Two years ago the bureau decided to commence a systematic tabulation of the manufacturing industries, and introduced a bill at the legislature providing for the registration of factories, work shops, mills and other manufacturing establishments. (Statutes 1913, Chap. 255). The bill was amended in the legislature and made to apply only to those places in which five or more persons are employed. This amendment has seriously handicapped our work, as will be shown by a comparison with the United States census on manufactures, 1909. In the federal census, over one half of the establishments reported employed less than five persons.

The purpose of the act providing for registration was to furnish a record of the various establishments, which could be used both for gathering statistics and for factory inspection.

Our progress has been rather slow, owing to the fact that this being the first attempt by the state to gather the information, we met with considerable resentment on the part of many employers and were compelled to adopt a policy of educating these employers in the value and importance of the state doing this class of work. We had hoped to be able to embody in this report a rather complete census of manufactures, but our missionary work, so to speak, has been so extensive that we could not complete the task in time. We have therefore omitted giving any figures on capital invested, or the value of the material used or the products manufactured. We deemed it inadvisable to submit such figures unless the same were complete.

In the following tables we have tabulated the information relating to numbers employed and wages. This information is complete for the establishments reported. The canning industry is not included, as we intend leaving it for a separate investigation.

The tabulations cover 1,576 establishments, employing a total of 57,648 male and 8,378 female wage earners; and 9,987 male and 1,876 female salaried employees, making a total of 77,889 persons employed on December 15, 1913, or the nearest representative date.

The annual wages paid to these employees amounted to \$8,123,994 for officers, superintendents and managers; \$9,281,900 for clerks, stenographers, salesmen, etc., and \$52,054,483 for wage earners, making a total of \$69,460,377.

The weekly wage rates of wage earners have been tabulated and are given for four classifications, to wit: male and female, eighteen years of age and over, and under eighteen years. Of the male wage earners, eighteen years and over, 35.6 per cent received less than \$15 per week. Of the female wage earners eighteen years of age and over, 49.3 per cent received less than \$9 per week. Of the male wage earners under eighteen, 16.4 per cent received less than \$6 per week, and of the female wage earners under eighteen years 28.5 per cent received less than \$6 per week.

The number of wage earners employed during each month of the year has also been tabulated in order to show the fluctuation in employment. The canning industry has been omitted, owing to the fact that it is so highly seasonal and would tend to distort the general result.

The number of male wage earners fluctuated from 53,458 in January to a maximum of 63,197 in May and 63,035 in September, or, an increase of 18 per cent from the lowest to the highest number. The high number in the month of May is due to the influence of the lumber industry.

The number of female wage earners fluctuated from a minimum of 7,650 in January to a maximum of 8,121 in December, or, an increase of 6 per cent from the lowest to the highest number.

It will be noted that the employment of women is far more stable than that of men, and it is also interesting that the month of December is the time of greatest employment for women and least employment for men; that is, when we omit the canning industry.

The various industries have been grouped into eighty classifications, a separate table being shown for each classification, together with a summary for all the industries.

REPORT

OF THE

State Water Commission of California

PUBLISHED APRIL 1, 1914

CALIFORNIA
STATE PRINTING OFFICE
1914

LETTER OF TRANSMITTAL.

SACRAMENTO, CALIFORNIA.

To His Excellency, the Governor, State of California.

SIR: In compliance with the provisions of Chapter 41, Statutes of 1911, creating and establishing this Commission, we have the honor to submit a report of the work performed from November 1, 1912, to April 1, 1914.

Respectfully submitted this first day of May, 1914.

STATE WATER COMMISSION,

CHARLES D. MARX, Chairman.

J. A. PATTEN, Acting Secretary.

Entrance to upper part of Clear Lake in Lake County, where it is proposed to elevate the lake ten feet; permit for which was granted to the Yolo Water and Power Company by this Commission, with the restriction that they should acquire all property rights that would be affected by the rise. By utilization of this lake as a storage reservoir 49,090 theoretical horsepower will be generated and approximately 200,000 acres of land in Yolo County will be irrigated.

REPORT.

The report briefly reviews the work accomplished by the State Water Commission since the date of its creation (Chapter 41, Laws of California, 1912, approved January 2, 1912), and contains a summary of applications filed with the Commission for permits to appropriate the use of the waters of the State during that time. A copy of said act is attached hereto and marked Exhibit A.

On April 8, 1911, by legislative action, the State Board of Control (Water Power) was created; an appropriation of \$50,000.00 was made for the purpose of carrying into effect the provisions of said act.

On March 23, 1912, the State Water Commission took over the work of the State Board of Control in so far as it related to the filing of applications to appropriate the use of water. The act creating the State Board of Control (Water Power) and that creating the State Water Commission were identical, with the exception that the term of license was extended from twenty-five years to forty years; it was, therefore, held that when the Water Commission was created the law under which applications were filed with the Board of Control was repealed, and that this had the effect of canceling all applications and permits issued by said Board. All persons having pending applications and permits had to re-file such applications with the State Water Commission. The balance of the unexpended portion of the appropriation made April 8, 1911, for the State Board of Control (Water Power) was made available by the act creating the State Water Commission, for the use of said Commission. This amounted to the sum of \$37,083.79, the State Board of Control (Water Power) having expended the sum of \$12,916.21 from April 8, 1911, to March 22, 1912.

The legislature of 1913 passed an act creating a state water commission having authority to accept applications for the use of water for all purposes; the old water commission having authority only to receive applications for permits for the use of water for power purposes. A copy of said act is appended hereto and marked Exhibit B.

As it was believed that the act above mentioned would be effective by August 10, 1913, a new appropriation for the present State Water Commission was not requested of the legislature.

The new Water Commission Act was, however, suspended in its operation by reason of a referendum petition filed against it by those opposed to its provisions. The opposition to the new act arises through ignorance of its true merits, and wherever opportunity has been given to explain the manner in which the act will operate, opposition has ceased. A state-wide vote will be taken in November, 1914, upon the merits of the new act.

On August 1, 1913, there remained, unexpended, of the appropriation

made April 8, 1911, to the State Board of Control (Water Power), and made available for the Water Commission by the present law, the sum of \$9,181.03. With this sum the Commission has, with the assistance of the Conservation Commission, through the sharing of office room and other co-operation and assistance, been enabled to accomplish the purposes for which it was created.

The Commission employs a secretary, who is likewise the secretary of the State Conservation Commission; an engineer, a clerk and a janitor.

FINANCIAL STATEMENT.

The following statement shows the expenditures of money made by the Commission, from March 23, 1912, to April 1, 1914:

U. S. Geological Survey (Water Resources)-----	\$8,180 23
U. S. Geological Survey (River Profiles)-----	8,106 63
Salaries of employees of Commission-----	10,101 45
Per diem of members of Commission-----	970 00
Traveling expenses -----	889 28
Office expenses and property -----	1,207 80
Commissioners' expenses -----	877 91
Contingent expenses (extra assistance, etc., also reporting of hearings) -----	2,451 47
Refund to Controller -----	338 00
<hr/>	
Total disbursements to April 1, 1914-----	\$33,122 77
Appropriation and refunds -----	\$37,421 97
Disbursements -----	33,122 77
<hr/>	
Balance -----	\$4,360 52

The above expenditures also include the work, done by the Commission, covered by the report to the Governor, dated January 1, 1913.

The filing fees received from March 23, 1912, to April 1, 1914, amount to \$720.00. The license fees received by the Commission amount to \$483.80. These moneys have been transmitted to the State Controller and deposited in the State treasury to the credit of the general fund of the State, in accordance with section 19 of the act creating this Commission.

APPLICATIONS FILED WITH THE COMMISSION.

Thirty-eight applications for permits to appropriate the use of the waters of the State have been filed with the Commission since the last report was submitted. Twenty-one of these applications have been rejected, either for failure to comply with the rules and regulations of the Commission or because it appeared, after hearing had upon such applications, that the interests of the State demanded it. Permits to construct works were granted upon eleven of said applications. Six of such applications are now pending awaiting action by the Commission. A copy of the form of application is appended hereto and marked Exhibit C.

Of the eleven permits granted as above set forth, four have been revoked either for failure to begin construction work within the time limit stated in such permit, or upon the express request to do so, by the applicant. Seven permits still continue in force and are intact upon the records of the Commission.

Three of the projects upon which permits were granted must be completed during the year 1914 according to the limitation of time for such construction named in said permits.

One project with a contemplated development of 300 horsepower must be completed in the year 1915. Two projects with a contemplated development of 19,520 horsepower must be completed in 1916, and one project contemplating the development of 49,000 horsepower must be completed in the year 1919.

The total estimated cost of all the works in the above contemplated projects approximates the sum of \$5,941,300.00.

During the past year one applicant has completed his project and a license was issued therefor in December, 1913. This license permits the use of 25 cubic feet per second of the waters of Canyon Creek. The project develops 1,178 theoretical horsepower and the cost of the construction approximates \$19,700.00.

Summary Showing Status of Pending Permits.

Applicant	Stream	Amount	Theoretical horsepower	Cost of works
		Cubic feet		
Murray & Fletcher.....	Boulder Creek	50	1,000	\$75,000 00
Yolo Water and Power Co.	Clear Lake and Cache Creek	500	49,090	5,185,000 00
Salve Olsen	North Fork Feather.....	25	100	7,500 00
J. F. Thompson.....	Volcano Canyon	4	100	4,000 00
C. E. Loose.....	East Walker	230	10,420	422,301 90
Birchville Mining Co.....	Weaver Lake	6.25	300	30,000 00
R. G. Gillespie.....	North Yuba River.....	37.50	200	18,500 00

NEW RULES AND REGULATIONS OF COMMISSION.

The Commission found from experience in handling applications that the data furnished thereon was not sufficient. This necessitated the suspension of action upon such applications and the filing of amendments. This condition was often taken advantage of by applicants in gaining time in which to speculate in water rights, and was clearly a technical violation of the terms of the act creating this Commission. On the other hand, an applicant is not expected to risk his money and time in gathering the data required by the act to be filed with an application and run the chance of having an application filed ahead of his.

In order to overcome this condition and pursuant to the authority vested in the Commission by sections seven and twenty-one of the act,

new rules and regulations were formulated and promulgated on October 1, 1913.

These new rules and regulations provided, among other things, that one intending to apply to the Commission for a permit to use water may file a notice of intention to appropriate. If it appears that the applicant does not intend to speculate in such location, the Commission may grant him a preliminary permit for a period of from one to six months or more, depending upon the necessities of the case. This has the effect of protecting him until he can file a formal application for the use of the water with the Commission. Upon the granting of a permit, the rights of the applicant relate back to the date of filing of the notice of intention to appropriate.

The form of the notice of intention provides that in case the applicant for a preliminary permit should fail to diligently prosecute the work of gathering the necessary data or should be found to be speculating in such permit, the same shall be surrendered by applicant and cancelled by the Commission. A copy of the rules and regulations and of the form of this notice of intention to locate are appended to this report and marked Exhibits D and E.

SUMMARY OF PRELIMINARY PERMITS.

Twenty-three notices of intention to appropriate water have been filed with the Commission pursuant to the provisions of the new rules and regulations. Permits have been granted upon twenty-one of these notices. Two applications were denied. The work of gathering data and making surveys has been completed and formal applications filed upon two of such permits. One permittee has failed to complete the work required under such permit and the same has been cancelled.

The notices of intention are as follows:

Name of stream	Number of notices
Baker Creek	4
Big Pine Creek	1
Burney Creek	1
Cartago Creek	1
Carriso Creek	1
Falls Creek	1
Fall River	1
North Fork Kings River	1
Little Rock Creek	1
Lone Pine Creek	1
Lost Creek	1
Olancha Creek	1
San Joaquin River	2
Santa Ana River	1
Walker Creek	1
Willow Creek	1
North Yuba River	2
South Fork Middle Fork of Yuba River	1

CO-OPERATION WITH UNITED STATES GEOLOGICAL SURVEY.

In accordance with the terms of a co-operative agreement between the State Water Commission and the United States Geological Survey, entered into on August 18, 1911, there was expended by this Commission the sum of \$1,400.00 in the purchase of seven Gurley automatic water registers.

The report of the district engineer of the United States Geological Survey relative to the installation of said gages is herein set out in full:

Report to the State Water Commission on the Installation of Recording Water Stage Registers Purchased in 1912.

"In the fall of 1912 you purchased seven Gurley water stage registers to be installed on streams for which river profiles were available.

The general plans for the installation of recording gages provide for a well on the bank of the stream, having inside dimensions of about 3 by 4 feet, extending from above flood stage to a depth sufficient to reach below any possible low water. This well is connected with the river by means of a 4-inch pipe. The gage house or shelter is built directly over the well and of such size as to permit ready access to the instrument. The size of the building should, in general, not be less than about 5 by 6 feet inside.

Six of the gages have been installed and are in satisfactory operation. The remaining gage will be installed during the coming low water season on Tuolumne River near La Grange without expense to the Commission.

A statement follows giving the location of each gage, a brief explanation of the type of construction, and the total cost of the installation. You will note that all gages have been installed on streams for which river profiles are available.

North Fork American River near Colfax, Cal.

This station is located just below the Forest Hill bridge on the

North Fork American River, Colfax, California. Gurley Electric Gage.

road from Colfax to Forest Hill, about 5 miles southeast of Colfax. The well and gage house are built of wood in accordance with the standard plans of the survey. The depth of the well is 26 feet, and is connected with the river by means of a 4-inch wrought iron pipe, 62 feet in length. A large part of the excavation was in solid rock. The installation was completed in December, 1912, at a total cost of \$361.75, exclusive of gage.

Pitt River, Henderson, California. Gurley Electric Gage.

Pitt River at Henderson, Cal.

This station is located at Henderson, about 60 miles from Redding, the nearest railroad point. The well and gage house are built of wood after the standard plans of the survey. The well, which is 17 feet in depth, is connected with the river by means of a 4-inch wrought iron pipe 25½ feet in length. The installation was completed in December, 1912, under very unfavorable weather conditions. The total cost was 5325.50, exclusive of gage.

This does not include the services of one ranger furnished by the U. S. Forest Service.

Tuolumne River near Groveland, Cal.

This station is located about a mile below the mouth of South Fork Tuolumne River and about 15 miles by road from Groveland. The well and gage house are built of wood in accordance with the standard plans of the survey. The well is 26 feet deep, and is connected with the river by means of a 4-inch wrought iron pipe 40 feet in length. The installation was expensive on account of the

Tuolumne River, Groveland, California. Gurley Recording Gage.

isolated location and the large amount of solid rock excavated. It was necessary to establish a camp and supplies were packed over the trail from the end of the road at South Fork. The work was completed in December, 1912, at a cost of \$749.93, exclusive of gauge. This does not include supervision by the U. S. Forest Service hydrographer and some additional assistance by a ranger.

San Joaquin River near Friant, Cal.

The gage was installed at a new location about 2 miles below our previous station and $1\frac{1}{2}$ miles above Friant. The present site is very much superior to the old one, as the flow is controlled by a solid rock dyke extending across the channel below the gage. At the original location the control was gravel which shifted during high water. On account of the natural conditions at the new site selected it was considered necessary to build the well of reinforced concrete. The well is of special design, 3 by 4 feet inside, $21\frac{1}{2}$ feet deep, and projects about 10 feet above the surface of the ground in order to place the gage above possible high water. It is connected with the river by means of a 4-inch galvanized iron pipe 50 feet in length. The gage house, which is 5 by 6 feet, is built of rough lumber and covered with shingles. The installation was completed early in December, 1913, at a cost of \$620.77, exclusive of gage. The concrete in place cost \$6.40 per cubic yard.

San Joaquin River, Friant, California. Gurley Recording Gage.

Middle Feather River near Cromberg, Cal.

The gage was installed about $1\frac{1}{2}$ miles below the original Forest Service Cooperation station at Cromberg and $\frac{1}{2}$ mile above Sloat on Western Pacific Railway. The well, which is about $4\frac{1}{2}$ feet in diameter, and 19 feet in depth, has a masonry lining, as this was the most suitable material available. It is connected with the river by means of a 4-inch galvanized iron pipe 50 feet in length. The gage house is about 7 by 7 feet and is built of rough lumber, papered, and covered with shingles.

The installation was completed early in December, 1913, at a cost of \$606.82, exclusive of gage. The expense of this work was somewhat increased by the unfavorable weather and high cost of labor. This does not include supervision by the U. S. Forest Service hydrographer.

Middle Feather River, Cromberg, California. Gurley Electric Gage; before house was shingled.

American River at Fair Oaks, Cal.

The gage is located in the same pool as the original station, about 800 feet below the highway bridge at Fair Oaks. The site selected is at the foot of a steep bank about 100 feet in height. The river is subject to very severe floods. In view of these facts it was imperative to build both well and house of reinforced concrete specially designed for this location. The well has a total depth of 40 feet and projects about 20 feet above the surface of the ground. It is 3 by 4 feet inside and is connected with the river by means of a 4-inch galvanized iron pipe 87 feet in length. The gage house is 5 by 6 feet inside and has two metal window frames and a metal-covered door. The work was delayed by the heavy rains and the high water, which caused much inconvenience and washed away considerable material. A large amount of excavation was necessary in order to lay the inlet pipe. The material was largely hardpan which required blasting. The work was completed in January, 1914.

The total cost of the installation, exclusive of the gage, was

\$1,680.30. It was estimated that the storms and high water increased the cost of the work about \$200.

American River, Fair Oaks, California.

Tuolumne River near La Grange, Cal.

For a number of years a gaging station has been maintained at La Grange dam. The results have not been entirely satisfactory on account of the diversions at either end by the Turlock and Modesto irrigation districts. Last October I made a reconnaissance of the Tuolumne River for several miles above La Grange. At a point perhaps a mile above the influence of backwater from the dam, an excellent location for a gaging station was found. A solid rock dyke extends across the channel, forming a permanent control. Arrangements were made with the Turlock Irrigation District whereby they agreed to install the recording gage at this site. The expense of this construction will be considerable, as a large amount of excavation in solid rock is necessary. The excava-

tion was completed last December, but the high water came before the concrete work could be started. Nothing further can be done until next summer when the work will be completed.

Gurley Recording Gage.

A set of photographs showing each of the above completed installations is enclosed herewith.

Respectfully submitted.

H. D. MCGLASHAN, District Engineer.

San Francisco, Cal., February 20, 1914.

General co-operative agreement.

Before one can develop the use of water for power purposes he must obtain the sanction of the United States for the right to use the lands which may be necessary for the development of the project, and, in addition thereto, receive a license from the State for the use of the water

If objection arises on the part of the Federal Government to the use of its lands, or if the state authorities refuse to grant a right to the use of the water, a situation may arise in which the proposed development is sanctioned by one authority and not allowed by the other. Such a situation is unfortunate, since it may lay both the State and the Federal Government open to criticism as obstructionists, and materially interfere with the prompt and orderly development of water resources.

To remove as far as possible these difficulties, and to secure as harmonious action in such cases as circumstances permit, a further co-operative agreement was entered into on the 21st day of February, 1913, between the State of California and the United States Geological Survey, the terms of which are as follows:

1. The State will notify the Director of the Geological Survey, Washington, D. C., of all applications filed with the State Water Commission to appropriate water for power development, giving opportunity for presentation to the Commission of any objection to the approval thereof which may be known to the Geological Survey.

2. The Director of the Geological Survey will, upon the receipt by him of any application for rights of way across public land in California which is for the express purpose of developing water power, or which appears to involve the streams of the State for this purpose, or which appears to affect adversely the water resources of the State, notify the State Water Commission of the receipt of such application and request the Commission to furnish such information as it may have concerning the status of the water rights involved and of the proposed development under the laws of the State of California giving opportunity for the State formally to protest the approval of the application.

3. Upon the issuance of a license by the State of California to divert and use water for power development, the Water Commission will notify the Director of the Geological Survey of such action.

4. Upon the approval by the Secretary of the Interior of a permit for water-power development affecting lands within the State of California, the Director of the Geological Survey will notify the State Commission of such action.

In accordance with the terms of said agreement the Commission has transmitted to the Geographical Survey copies of its records of location notices, filed in the various counties of the state under sections 1410 to 1422 of the Civil Code of California, for the use of water for power purposes, as well as copies of all applications made to this Commission since its creation.

The Geological Survey, in return, has transmitted to this Commission copies of applications and permits, for permission to use the public lands for power development filed with the Interior Department, since April 8, 1911; in addition thereto there was transmitted to this Commis-

sion copies of cards showing power-site withdrawals within the State of California. Following is a list of such withdrawals:

Withdrawals for Power Sites and Transmission Lines.

All the above townships and ranges being in Mt. Diablo base and meridian.

The above cards are on file in the office of the Commission and are available for inspection.

For reasons similar to those which prompted the execution of the co-operative agreement with the Geological Survey, this Commission has submitted a tentative agreement, somewhat similar to the one with the Geological Survey, to the United States Forest Service. It is expected that this agreement will be signed by both of the contracting parties in the near future.

STUDY OF FLOOD CONTROL AND CANALIZATION OF THE SAN JOAQUIN VALLEY.

An appropriation of \$2,500.00 was made by the 1911 legislature for the use of the State Engineer for the purpose of a study of flood control and canalization of the San Joaquin Valley. The Advisory Board of the Department of Engineering decided, upon the recommendation of the State Engineer, that, as the appropriation was small and the Water Commission had a co-operative agreement with the Geological Survey for the furnishing of profile surveys on other streams of the State, more complete data could be obtained by co-operation with the survey through the Hydrographic Division thereof. It was understood that this study would extend only to the profile survey, as the funds were insufficient to warrant a more extensive examination.

Maps of the results of this examination will be found attached hereto and marked Exhibit F. The report upon the examination is as follows:

Water Power on San Joaquin River.

San Joaquin River rises in the high Sierras southeast of Yosemite National Park and is formed by the junction of its Middle and South forks in the northern part of township 6 south, range 25 east, Mount Diablo base and meridian; it flows southwestward to the trough of San Joaquin Valley, where it takes a northwesterly course to Suisun Bay, into which it discharges, about 50 miles by water from San Francisco.

The South Fork, which drains the larger area and is therefore considered the head of the main stream, rises in Martha Lake southwest of Mount Goddard, at altitude 11,007 feet above sea level, flows northwestward about forty miles, then turns to the west and southwest to join the Middle Fork. This fork is 44 miles long. Its principal tributaries are Evolution, Piute, Bear, and Mono creeks. The basin of the South Fork is bordered on the east by the Sierra Nevada, whose crest it touches for a distance of 40 miles. Elevations range from 4,000 feet at the junction with the Middle Fork to more than 13,000 feet at the highest summits. The tributaries drain numerous glacial lakelets, several of which are more than 11,000 feet above sea level.

The Middle Fork rises in Thousand Island Lake about 5 miles east

of Mount Lyell, at an altitude of 9,850 feet above sea level. Its principal tributary is its North Fork, which enters about 10 miles above the point at which it joins South Fork to form San Joaquin River. In the upper part of the basin of the Middle Fork lakes are numerous. The North Fork of Middle Fork rises on the southeastern slope of Mount Lyell and flows southerly to its junction with Middle Fork. The basin of North Fork contains fewer lakes than that of Middle Fork.

Between Friant and the junction of South and Middle forks the river flows in a narrow canyon. The slope is fairly uniform from Friant to Italian Bar (a distance of 40 miles) averaging 26 feet to the mile, and from Italian Bar to the junction of the forks (a distance of 27 miles) averaging 86 feet to the mile. In the total distance of 67 miles the tributary streams are relatively small and unimportant, except Big Creek, which enters the river from the south in unsurveyed township 8 south, range 24 east, and the North Fork, which enters the river from the north in township 9 south, range 23 east.

The possibilities for storage on the upper tributaries of South and Middle forks are largely unknown, but in general the quantity of water available for storage in any of the glacial lakelets which these tributaries drain is small.

The lower sections of the South and Middle forks appear to furnish reservoir sites which may be constructed profitably to have considerable storage capacity. No surveys have been made, however, to determine the capacities of such reservoirs or the magnitude of dams required to close the present outlet channels.

Below the junction of the South and Middle forks, possibilities for storage are unimportant except on Big Creek and the North Fork. Within this distance are many feasible dam sites, but the storage that could be developed could have little effect in connection with the seasonal regulation of flow. Such storage would be sufficient, however, to regulate the daily flow for the generation of power on the basis of any reasonable load curve.

Two power companies are now operating in the basin of San Joaquin River above Friant. The San Joaquin Light and Power Corporation has constructed the Crane Valley reservoir with a capacity of 51,000 acre-feet on the North Fork and has developed power at two sites on that stream. The upper of these two plants diverts water from the river at the reservoir and conducts it through a canal about 4.2 miles long and returns it to the stream with a head of 400 feet. The installation of the power house has a capacity of 1,600 kilowatts. At the second plant, water is diverted from the stream about 3 miles below the power house of the first plant and is conducted through a canal 4.62 miles long and returned to the river with a head of 1,405 feet. The installation of the power house has a capacity of 16,000 kilowatts.

The Pacific Light and Power Corporation is now constructing a storage reservoir on Big Creek, to have a capacity of 100,000 acre-feet, and is constructing two power plants to utilize heads of 2,100 and 1,900 feet, respectively, and each to have a capacity of 60,000 kilowatts.

The remaining streams of the basin above Friant, comprising San Joaquin River, South and Middle Forks, and North Fork (of Middle Fork), contain large undeveloped powers. The two elements—slope and discharge of the streams—which determine the magnitude of such powers, have been investigated by the State Water Commission in co-operation with the United States Geological Survey. The ten maps showing the slope and the contours of the banks of the streams accompany this report. The records of discharge are published in full in the regular series of water-supply papers of the United States Geological Survey and have been compiled to June 30, 1912, and published in Water-Supply Paper No. 299. The monthly maximum, minimum, and mean discharges measured at the various gaging stations in the basin are presented herewith in order that approximate estimates of the values of the powers may be obtained from this report alone.

The plan and profile sheets give in general no information as to the material forming the banks and bed at particular points in the streams. Many good dam sites are available, however, and in the major part of the sections of the river covered by the surveys high dams could be constructed at almost any cross section of the channel. The location of power plants is, therefore, largely a matter of individual preference, and the final development can not be predicted so far as the exact sites for either dams or power houses are concerned. The choice of site for one plant will, however, limit the location of future plants in the vicinity. Unless the location and character of power developments on the river are controlled by some governmental agency, either State or National, it is probable that no well considered scheme will be followed and that any hypothetical plan for the river as a whole or even for possible sites would have no value commensurate with the cost of its preparation. This report is limited, therefore, to general information in regard to the water supply in different parts of the San Joaquin basin and the plan and profile of San Joaquin River and its principal tributaries on which the power sites are undeveloped, in the belief that such information will show within close limits the capacity of any site on the river that may be selected, a height of dam and length of diversion conduit having been assumed.

The following table shows the location of gaging stations which have been maintained on San Joaquin River and its tributaries, and the maximum, minimum, and mean discharges recorded during the periods of record:

Monthly Discharge of San Joaquin River at Herndon, Cal., for 1895-1901.
(Drainage area, 1,637 square miles.)

CHAPTER 41.

An act regulating and limiting the appropriation of water and the use of water for generating electricity or electrical or other power; fixing the terms and conditions and providing the manner and procedure upon which water or the use of water for generating electricity or electrical or other power may be appropriated and providing for the renewal of licenses granted hereunder; providing for the issuing of licenses for water or the use of water for generating electricity or electrical or other power and limiting rights under such licenses; prohibiting the appropriation of water or the use of water for generating electricity or electrical or other power for a longer period than forty years; limiting the right to water or the use of water appropriated for generating electricity or electrical or other power to the specific purposes for which it is appropriated; declaring certain water to be unappropriated; providing for the granting of licenses to divert and store surplus and flood waters for generating electricity, or electrical or other power and declaring what is surplus water; reserving to the state the right to regulate and fix the rates of compensation for which electricity or electrical or other power generated by water or the use of water appropriated may be sold, rented or distributed; reserving to the state the right to impose charges for water or the use of water appropriated for electricity or electrical or other power and fixing fees and charges; preventing the combination or formation of any unlawful trust by appropriators of water or the use of water for generating electricity or electrical or other power and providing a penalty therefor; creating and establishing a state water commission; providing the powers and duties of said water commission and fixing their compensation; compelling persons, firms, associations and corporations supplying electricity or electrical or other power generated by the use of appropriated water to keep their plants and systems in repair and requiring an annual report from them to said water commission; providing for the appointment and compensation of employees and assistants to said water commission; limiting the expenses of said water commission and providing for the payment thereof; making an appropriation to carry out the provisions of this act; fixing the place of business of said water commission; declaring the diversion of water or use of water for generating electricity, or electrical or other power, otherwise than provided in this act, to be a misdemeanor and providing a penalty therefor, and also providing penalties for other violations of this act; repealing an act entitled "An act regulating and limiting the appropriation of water for generating electricity or electrical or other power; fixing the terms and conditions and providing the manner and procedure upon which water for generating electricity or electrical or other power may be appropriated and providing for the renewal of licenses granted hereunder; providing for the issuing of licenses for the use of water for generating electricity or electrical or other power and limiting rights under such licenses; prohibiting the appropriation of water or the use of water for generating electricity or electrical or other power for a longer period than twenty-five years; limiting the right to the use of water appropriated for generating electricity or electrical or other power to the specific purposes for which it is appropriated; declaring certain water to be unappropriated; providing for the granting of licenses to divert and store surplus and flood waters for generating electricity, or electrical or other power and declaring what is surplus water; reserving to the state the right to regulate and fix the rates of compensation for which electricity or electrical or other power generated by water appropriated may be sold, rented or distributed; reserving to the state the right to impose charges for the use of water appropriated for electricity or electrical or other power and fixing fees and charges; preventing the combination or formation of any unlawful trust by appropriators of water or the use of water for generating electricity or electrical or other power and providing a penalty therefor; creating and establishing a state board of control; providing the powers and duties of said board of control and fixing their compensation; compelling persons, firms, associations and corporations supplying electricity or electrical or other power generated by the use of appropriated water to keep their plants and systems in repair and requiring an annual report from them to said board of control; providing for the appointment and compensation of employees and assistants to said board of control; limiting the expenses of said board of control and providing for the payment thereof; fixing the place of business of said board of control; declaring the diversion or use of water for generating electricity, or electrical or other power, otherwise than provided in this act, to be a misdemeanor and providing a penalty therefor, and also providing penalties for other violations of this act; repealing all acts and parts of acts in conflict with this act," approved April 8, 1911, and all acts and parts of acts in conflict with this act.

[Approved January 2, 1912.]

The people of the State of California do enact as follows:

SECTION 1. Water or the use of water for the generation of elec-

tricity or of electrical or other power shall not be appropriated for a longer period than forty years.

SEC. 2. Subject to vested and existing rights, in so far as such vested and existing rights are based upon actual needs and application to useful or beneficial purposes, the appropriation of water or of the use of water for the generation of electricity or of electrical or other power shall be made as provided by this act, and not otherwise; *provided, however*, that nothing in this act shall be construed to validate any right or privilege now invalid or hereafter becoming invalid under any law of this state.

SEC. 3. Water or the use of water appropriated for purposes other than the generation of electricity or of electrical or other power shall not be used for the generation of electricity or of electrical or other power except under a separate and distinct appropriation made as provided in this act for such purpose.

SEC. 4. All water or the use of water which has been heretofore appropriated and which has not been put, or which has ceased to be put to some useful or beneficial purpose, or which is not now in process of being put to some useful or beneficial purpose with due diligence in proportion to the magnitude of the work necessary properly to utilize for the purpose of such appropriation such water or such use of water, is hereby declared to be unappropriated.

SEC. 5. All appropriations of water or the use of water for generating electricity or electrical or other power shall be subject to the right of the state to regulate and fix the rates of compensation for which such electricity or electrical or other power may be sold, rented or distributed.

SEC. 6. Any person, firm, association or corporation hereafter intending to appropriate water or the use of water for the generation of electricity, or of electrical or other power, before commencing the construction or enlargement or extension of any building, power house, ditch, canal or any distributing or controlling works, or performing any work in connection with said appropriation or proposed appropriation, shall make an application in duplicate to the state water commission, provided for in this act, for a permit to make such appropriation. No person, firm, association or corporation shall wilfully divert or use water or shall wilfully attempt to divert or use water for generating electricity or electrical or other power without first complying with the provisions of this act. The possession or use of water for generating electricity or electrical or other power, except when a right to said water or the use thereof shall have been acquired in accordance with law, shall be prima facie evidence of such wilful diversion or use or attempted diversion or use of such water.

SEC. 7. Every application for a permit to appropriate water or the use of water for the generation of electricity or of electrical or other power shall set forth the residence, or principal place of business if the applicant be a corporation, and post-office address of the applicant, the source of the water or the use of water to be appropriated or used, the nature and amount of the proposed use, the head of and amount of water to be utilized, the uses to which the water and electricity or electrical or other power are to be applied, the nature, the location (which may be changed by permission of the state water commission), the character, the estimated capacity, and the estimated cost of the works, and whether the water is to be and will be returned to the

stream or source from which it is to be taken, and if so at what point on the stream or source it is proposed to return said water to said stream or source. If the application is for the construction of a reservoir for the purpose of storing water to be used for the generation of electricity or of electrical or other power, it shall give the estimated height of the dam and the estimated capacity of the reservoir in addition to the other requirements above set forth. All applications shall be accompanied by such maps and drawings in duplicate and such other data in duplicate as may be prescribed by the water commission, and such accompanying data shall be considered as a part of the application. A true copy of such application without such accompanying data and maps and drawings shall be recorded by the applicant in the office of the recorder of the county, or city and county, in which the proposed works are to be erected, within ten days after said application is filed with said commission.

SEC. 8. Upon receipt of an application under this act, it shall be the duty of the water commission immediately to cause to be made an endorsement thereon of the date of its receipt, and to keep the duplicate of said application and its endorsement on file as a record of the same. The water commission shall immediately examine the said application after it has been filed. If, upon such examination, the application is found to be defective, one copy of it and its accompanying data, maps and drawings shall be returned to the applicant for correction or completion, and the date of and reasons for the return thereof shall be endorsed thereon, and a record kept of such endorsement in the office of the water commission. No application shall lose its priority of filing on account of such defect; *provided*, a proper application is filed in the office of the water commission within thirty days of the date of said return to the applicant. It shall be the duty of the water commission within six months to enter an order directing the rejection of such application if after further hearing the public interests shall seem to the water commission so to demand. Applications may be approved for a less amount of water or the use of water than that applied for, if there exist substantial reasons therefor, but in any event shall not be approved for more water or the use of water than can be applied to the use for which application is made under an efficient and economical use thereof.

SEC. 9. The approval or rejection of an application shall be endorsed thereon and a record made of such endorsement in the office of the water commission. One copy of the application so endorsed shall be returned immediately to the applicant in person or by registered mail. If said application be approved, the applicant shall immediately record said approved application, together with the endorsement thereon, in the office of the recorder of the county, or city and county, in which the proposed works are to be constructed, and shall be authorized on receipt of said approval and on recording the same, to proceed with the construction of the necessary works, and to take all steps required to apply the water or the use of the water to the purpose of generating electricity or electrical or other power, as provided in the approved application, and to perfect the proposed appropriation; *provided, however*, that no right in or to such water or the use thereof shall vest in or accrue to the said applicant until the final permit is issued as is hereinafter provided.

SEC. 10. Actual construction work shall begin within six months from the date of the approval of the application, and the construction of the work shall thereafter be prosecuted with reasonable diligence in proportion to the magnitude of the undertaking, and if such work is not so commenced and prosecuted, the water commission may revoke its approval of the application; and such work shall be completed within a reasonable time as fixed in the permit not to exceed five years from the date of such approval. Upon application of the proposed appropriator the water commission may for good cause shown extend the time within which such work shall be completed under any permit, but no such extension shall be for a longer period than one year beyond the period fixed in the permit.

SEC. 11. Upon the completion of the works for the diversion and application of water or the use of water under this act, the holder of such permit, or his assigns, shall report such completion to the water commission, and the water commission without delay shall cause to be made a full inspection and examination of the works constructed and a report upon their construction and condition, and whether or not they conform to the terms of the application and permit and are adequate for the purposes intended.

SEC. 12. Upon the receipt of such report, the commission shall, if the law has been fully complied with, and if the work shall have been completed in accordance with the application, issue a license to the applicant or his assigns, allowing him or them to divert and use said water, or so much thereof as may be necessary, for the use proposed, for a certain period of time therein specified, but in no case for more than forty years. Licenses granted upon application made under this act for water or the use of water shall be numbered consecutively as to each stream or other source in the order as to the dates when such applications are filed.

SEC. 13. Said license shall set forth the name of the licensee, his place of residence, and if a corporation or firm or association the date of its organization and its principal place of business, the stream or source from which the water is to be diverted or used, the quantity of water the licensee is authorized to divert from the stream or source, the point or points on said stream or source at which said water is to be diverted or used, the location of the proposed works, the period of time for which the water may be used, which in no case shall be for more than forty years, by what means, and the purposes for which the licensee is authorized to use the same.

SEC. 14. Any license issued as above provided for water or the use of water appropriated under this act shall vest in the licensee the right to the use of the amount of water mentioned therein for the period of time therein set forth, in the manner and for the purposes therein mentioned and not otherwise; *provided*, that such license shall not impair or affect any rights to water or the use of water which shall have become vested prior to the making of the application above provided for.

SEC. 15. Any appropriator of water or the use of water under the provisions of this act for the purpose of generating electricity or electrical or other power, or the successor or assigns of said appropriator, if a renewal or extension of the license herein provided for is desired, shall, not less than one or more than two years prior to the termination of the license granted as herein provided, notify the water commission

that a renewal and extension of such license is desired. The water commission shall thereupon issue to said appropriator a renewal and extension of said license for a fixed period, but in no case for more than a period of forty years from the date of such renewal in compliance with such laws of the state as shall then be in force regulating the renewal, issuing and granting of any license for water or the use of water for generating electricity or electrical or other power.

SEC. 16. No license for the appropriation of water or the use of water as herein provided shall be valid as to any excess of the capacity of the works actually constructed.

SEC. 17. The water commission may, upon application made therefor in the manner provided in this act and upon like procedure, grant to any person, firm, association or corporation a license to divert and store for the purpose of generating electricity or electrical or other power the surplus waters of any stream during floods or high water, or during those portions of the year when such water is not required or being stored for irrigation purposes, and for the purpose of this act all water which is not used during the season of flood or high water is declared to be surplus water.

SEC. 18. All appropriation of water or the use of water for generating electricity or electrical or other power heretofore or hereafter made shall be subject to the right of the state to impose the fees and charges herein provided, and shall also be subject to the right of the state to increase or decrease such fees and charges from time to time thereafter.

SEC. 19. Every person, firm, association or corporation making application for permission to appropriate water or the use of water under this act shall, at the time of filing the said application, pay to said water commission a fee of ten dollars. Every person, firm, association or corporation at the time of receiving a license to appropriate water or the use of water, as provided in this act, shall pay to said commission a fee of one hundred dollars, and shall also pay to said commission when the said license is issued, and, in addition thereto and annually thereafter, shall pay to said commission a charge for each theoretical horsepower of the works estimated as follows: For the first one hundred (100) horsepower there shall be no charge; and for all above one hundred (100) horsepower ten (10) cents for each horsepower. All fees collected shall be accounted for at the following regular meeting of the water commission and paid by said commission into the general fund of the state treasury within thirty days thereafter.

SEC. 20. For the purpose of carrying out the provisions of this act, a commission, to consist of five persons, is hereby created and established to be known as the state water commission. Three members of said commission shall be appointed by the governor for a term of four years; *provided*, that the members first appointed shall be appointed so that one of them shall go out of office at the end of one year, one at the end of two years, and one at the end of three years. The governor and the state engineer are hereby made *ex officio* members of said commission in addition to the three members appointed by the governor. The appointed members of said commission shall receive as compensation for services rendered by them, as such members, the sum of ten (10) dollars per day for each day's service actually rendered.

SEC. 21. The water commission is hereby authorized and empowered to do and perform the acts and things required of it by this act and to adopt rules and regulations necessary to carry out the provisions of this act, and it shall be the duty of the commission to provide for the public hearing upon the merits of all applications filed with the commission and to prescribe the rules of procedure to be observed at such hearings.

SEC. 22. Every member of said water commission is hereby authorized to administer oaths and to cause the production of persons, papers, records and books in all matters of business transacted before said commission.

SEC. 23. A full and accurate record of the business transacted or acts performed by any member of the water commission, and the proceedings of the meetings of said commission, shall be kept and shall be placed on file in the office of said water commission.

SEC. 24. Said commission is hereby granted power to employ such persons and to engage such assistants, clerical, professional and other, as it may see fit, and at such salaries or compensation as the commission may determine. And for the purpose of carrying out the provisions of this act so much of the sum appropriated by chapter 406 of the laws of 1911, approved April 8, 1911, entitled "An act regulating and limiting the appropriation of water for generating electricity," etc., as may not have been expended is hereby reappropriated, and the state controller is hereby authorized and directed to draw his warrants from time to time on the requisition of the state water commission approved by the state board of control, and the state treasurer is hereby authorized and directed to pay such warrants.

SEC. 25. All indebtedness incurred for salaries, and all necessary costs and traveling and other expenses of said commission, and each of its members and persons employed by it, while actually engaged in the business of said commission, shall be paid by the state out of the funds hereby appropriated upon a sworn statement of the person or persons incurring such indebtedness and upon the approval of the water commission and the state board of control upon warrants drawn upon the state treasurer as provided by law for the payment of similar costs and expenses and the drawing of similar warrants.

SEC. 26. All persons, firms, associations or corporations generating electricity or electrical or other power by water or the use of water appropriated under the provisions of this act shall keep their plants and systems in proper repair, and shall upon the first day of January after the passage of this act, and annually thereafter, report to said water commission the condition of their plants and distributing systems, the number of kilowatt hours of electricity or electrical or other power generated during each month of said year, the number of kilowatt hours of electricity or electrical or other power rented, sold or distributed during each month of said year, and the names of the persons, firms, associations or corporations to whom said power has been rented, sold or distributed.

SEC. 27. The water commission shall maintain its office at Sacramento, California. The superintendent of capitol building and grounds shall furnish and set aside in the capitol rooms suitable for offices for said water commission, and if the superintendent of capitol building and grounds shall make and file an affidavit with the said commission

that it is not possible for him as such superintendent of capitol building and grounds to provide offices for said commission in the capitol, then the said commission may rent rooms suitable for offices, in the city of Sacramento, and said rental shall be deemed a necessary expense of said commission.

SEC. 28. No person, firm, association or corporation appropriating water or the use of water hereunder shall enter into any agreement, combination or trust in restraint of trade contrary to law, and if any of the works owned or operated by any licensee under this act or his assign or assigns shall be owned, leased, trustee, possessed or controlled by any device, permanently, temporarily, directly or indirectly, tacitly, or in any manner whatsoever, so that it or they form a part of or in any way effect any combination, or if it or they are in anywise controlled by any combination or conspiracy to limit the output of electricity or electrical or other power, or to increase the price at which electricity or electrical or other power is sold, rented or distributed, or to prevent the lowering of said price or in restraint of trade with foreign nations, or between two or more states or territories or with any state or territory, in the generation, sale, distribution of electricity or electrical or other power, all rights to the appropriation of water or the use of water shall cease and be forfeited to the people of the state by proceedings instituted in the courts for that purpose by the attorney general of the state either upon his own initiative or upon demand of the water commission.

SEC. 29. Any violation of the provisions of this act, or of any order or regulation of the water commission, is hereby declared to be a misdemeanor, and shall be punished by a fine not exceeding five thousand (5,000) dollars or by imprisonment in the county jail not exceeding one (1) year, or by both such fine and imprisonment. It shall be the duty of the water commission to enforce the provisions of this act, and to prosecute violations thereof by proceeding in a court of competent jurisdiction against any person, firm, association or corporation violating any such provisions, or failing or refusing to comply with any regulation or requirement of the water commission made pursuant to the provisions of this act.

SEC. 30. None of the provisions of this act shall apply to municipal corporations, other than irrigation districts or lighting districts, nor to the use by any irrigation district of water for the generation of electricity, electrical or other power only for use and distribution within its own limits, and as subsidiary to and mainly for the purpose of serving and carrying out irrigation, nor to the use by any lighting district of water for the generation of electricity, electrical or other power only for use and distribution within its own limits; *provided, however*, that all municipal corporations, other than irrigation districts and lighting districts, desiring to appropriate water for the generation of electricity, electrical or other power, and all irrigation districts and lighting districts desiring to appropriate water for the generation of electricity, electrical or other power, and all irrigation districts and lighting districts desiring to appropriate water for the generation of electricity, electrical or other power, for the uses hereinabove in this section specified shall within ten days from the time that they post and record notices of appropriation, as required by law, file with the water commission a notice of said appropriation together with the name and post-

office address of the appropriator, the source of the water to be appropriated or used, the nature and amount of the proposed use, the head and amount of water proposed to be utilized, the uses to which the water and power are to be applied, the nature, location, character, estimated capacity and estimated cost of the works and whether the water is to be and will be returned to the stream or source from which it is to be taken and, if so, at what point on said stream or source. If the appropriation contemplates the construction of a reservoir for the purpose of storing water to be used for the generation of electricity or electrical or other power, the notices filed with the commission shall also give the estimated height of the dam and the estimated capacity of the reservoir in addition to the other requirements above set forth.

SEC. 31. Wherever in this act the performance or doing of certain acts or things by any firm, association or corporation is made a misdemeanor, and a penalty provided therefor, the person, officer, member, manager, agent, director or employee of any such firm, association or corporation who by vote, act, authorization, direction, order or request shall have caused such act or thing to be done is likewise and in the same manner guilty of a misdemeanor, and shall be punished likewise and in the same manner as the person actually performing or doing the act or thing.

SEC. 32. An act entitled "An act regulating and limiting the appropriation of water for generating electricity or electrical or other power; fixing the terms and conditions and providing the manner and procedure upon which water for generating electricity or electrical or other power may be appropriated and providing for the renewal of licenses granted hereunder; providing for the issuing of licenses for the use of water for generating electricity or electrical or other power and limiting rights under such licenses; prohibiting the appropriation of water or the use of water for generating electricity or electrical or other power for a longer period than twenty-five years; limiting the right to the use of water appropriated for generating electricity or electrical or other power to the specific purposes for which it is appropriated; declaring certain water to be unappropriated; providing for the granting of licenses to divert and store surplus and flood waters for generating electricity, or electrical or other power and declaring what is surplus water; reserving to the state the right to regulate and fix the rates of compensation for which electricity or electrical or other power generated by water appropriated may be sold, rented or distributed; reserving to the state the right to impose charges for the use of water appropriated for electricity or electrical or other power and fixing fees and charges; preventing the combination or formation of any unlawful trust by appropriators of water or the use of water for generating electricity or electrical or other power and providing a penalty therefor; creating and establishing a state board of control; providing the powers and duties of said board of control and fixing their compensation; compelling persons, firms, associations and corporations supplying electricity or electrical or other power generated by the use of appropriated water to keep their plants and systems in repair and requiring an annual report from them to said board of control; providing for the appointment and compensation of employees and assistants to said board of control; limiting the expenses of said board of control and

providing for the payment thereof; fixing the place of business of said board of control; declaring the diversion or use of water for generating electricity, or electrical or other power, otherwise than provided in this act, to be a misdemeanor and providing a penalty therefor, and also providing penalties for other violations of this act; repealing all acts and parts of acts in conflict with this act." approved April 8, 1911, and all acts or parts of acts in conflict herewith are hereby repealed.

SEC. 33. This act shall take effect ninety days after the final adjournment of this session of the legislature.

EXHIBIT "B."

CHAPTER 586.

An act to regulate the use of water which is subject to such control by the State of California, and in that behalf creating a state water commission; specifying and providing for the appointment of the members of said commission; fixing the terms of office and compensation of the members of said commission; fixing the powers, duties and authority of said commission and its members; providing for the filling of vacancies in the membership of said commission; providing for the removal from office of the appointed members of said commission; providing for the co-operation of courts with said commission; providing that certain courts shall take judicial notice of certain acts of the state water commission; specifying the duties of all persons summoned as witnesses before said commission or any of its members; appropriating money for carrying out the provisions of this act; providing for the payment of the indebtedness and expenses of said commission, its members and employees; declaring what water is unappropriated; providing for the utilization of water and the works necessary to such utilization to the full capacity of streams or of such portion or portions of such capacity as the public good may require; declaring what water may be appropriated; declaring that the non-application for ten consecutive years of any portion of the waters of any stream to lands riparian to such stream shall be conclusive presumption that the use of such non-applied water is not needed on said riparian lands for a useful or beneficial purpose; declaring that such non-applied water shall be deemed to be in the use of the state and subject to appropriation; declaring the duties of those who desire to appropriate water; declaring the periods for which water may be appropriated and the conditions under which water may be appropriated; providing for the payment of fees and charges by the applicants for permission to appropriate water and by the appropriators of water; providing for the ascertainment and adjudication of water rights; providing for the bringing of actions by certain persons, or, upon the direction of the state water commission, by the attorney general, for the quieting of title to water rights; specifying certain duties of the claimants, possessors or users of water or water rights; declaring water rights forfeited under certain conditions; regulating the appropriation of water; excepting cities, cities and counties, municipal water districts, irrigation districts and lighting districts from certain provisions of this act; defining certain words and terms used in this act; repealing all acts or parts of acts in conflict with this act; declaring how this act shall be known; making legislative declaration concerning those parts of this act which may not be declared unconstitutional.

[Approved June 16, 1913.]

The people of the State of California do enact as follows:

SECTION 1. For the purpose of carrying out the provisions of this act a state water commission consisting of five persons is hereby created and established. Two members of said commission shall be, ex officio, the governor of the state and the state engineer, respectively. Three members of said commission shall be appointed by the governor for the term of four years; *provided, however*, that of the members first appointed one shall be appointed to hold office until the first day in January, nineteen hundred and fourteen, one until the first day in January, nineteen hundred and fifteen, and one until the first day in January, nineteen hundred and sixteen. Such appointive commissioners shall be men of practical knowledge or experience in the application and use of waters for irrigation, mining and municipal purposes, and shall be so appointed that at least one thereof shall have had practical knowledge and experience in the use of water for agricultural purposes, and one thereof shall have had practical knowledge and experience in the use of water for mining purposes, and one thereof shall have had practical knowledge and experience in the use of water for municipal purposes. The commissioners shall elect one of their number president of the commission. The appointed members of said commission shall each receive as compensation for his services the sum of five thousand dollars per annum. No commissioner who is directly or indirectly

that it is not possible for him as such superintendent of capitol building and grounds to provide offices for said commission in the capitol, then the said commission may rent rooms suitable for offices, in the city of Sacramento, and said rental shall be deemed a necessary expense of said commission.

SEC. 28. No person, firm, association or corporation appropriating water or the use of water hereunder shall enter into any agreement, combination or trust in restraint of trade contrary to law, and if any of the works owned or operated by any licensee under this act or his assign or assigns shall be owned, leased, trustee, possessed or controlled by any device, permanently, temporarily, directly or indirectly, tacitly, or in any manner whatsoever, so that it or they form a part of or in any way effect any combination, or if it or they are in anywise controlled by any combination or conspiracy to limit the output of electricity or electrical or other power, or to increase the price at which electricity or electrical or other power is sold, rented or distributed, or to prevent the lowering of said price or in restraint of trade with foreign nations, or between two or more states or territories or with any state or territory, in the generation, sale, distribution of electricity or electrical or other power, all rights to the appropriation of water or the use of water shall cease and be forfeited to the people of the state by proceedings instituted in the courts for that purpose by the attorney general of the state either upon his own initiative or upon demand of the water commission.

SEC. 29. Any violation of the provisions of this act, or of any order or regulation of the water commission, is hereby declared to be a misdemeanor, and shall be punished by a fine not exceeding five thousand (5,000) dollars or by imprisonment in the county jail not exceeding one (1) year, or by both such fine and imprisonment. It shall be the duty of the water commission to enforce the provisions of this act, and to prosecute violations thereof by proceeding in a court of competent jurisdiction against any person, firm, association or corporation violating any such provisions, or failing or refusing to comply with any regulation or requirement of the water commission made pursuant to the provisions of this act.

SEC. 30. None of the provisions of this act shall apply to municipal corporations, other than irrigation districts or lighting districts, nor to the use by any irrigation district of water for the generation of electricity, electrical or other power only for use and distribution within its own limits, and as subsidiary to and mainly for the purpose of serving and carrying out irrigation, nor to the use by any lighting district of water for the generation of electricity, electrical or other power only for use and distribution within its own limits; *provided, however*, that all municipal corporations, other than irrigation districts and lighting districts, desiring to appropriate water for the generation of electricity, electrical or other power, and all irrigation districts and lighting districts desiring to appropriate water for the generation of electricity, electrical or other power, and all irrigation districts and lighting districts desiring to appropriate water for the generation of electricity, electrical or other power, for the uses hereinabove in this section specified shall within ten days from the time that they post and record notices of appropriation, as required by law, file with the water commission a notice of said appropriation together with the name and post-

office address of the appropriator, the source of the water to be appropriated or used, the nature and amount of the proposed use, the head and amount of water proposed to be utilized, the uses to which the water and power are to be applied, the nature, location, character, estimated capacity and estimated cost of the works and whether the water is to be and will be returned to the stream or source from which it is to be taken and, if so, at what point on said stream or source. If the appropriation contemplates the construction of a reservoir for the purpose of storing water to be used for the generation of electricity or electrical or other power, the notices filed with the commission shall also give the estimated height of the dam and the estimated capacity of the reservoir in addition to the other requirements above set forth.

SEC. 31. Wherever in this act the performance or doing of certain acts or things by any firm, association or corporation is made a misdemeanor, and a penalty provided therefor, the person, officer, member, manager, agent, director or employee of any such firm, association or corporation who by vote, act, authorization, direction, order or request shall have caused such act or thing to be done is likewise and in the same manner guilty of a misdemeanor, and shall be punished likewise and in the same manner as the person actually performing or doing the act or thing.

SEC. 32. An act entitled "An act regulating and limiting the appropriation of water for generating electricity or electrical or other power; fixing the terms and conditions and providing the manner and procedure upon which water for generating electricity or electrical or other power may be appropriated and providing for the renewal of licenses granted hereunder; providing for the issuing of licenses for the use of water for generating electricity or electrical or other power and limiting rights under such licenses; prohibiting the appropriation of water or the use of water for generating electricity or electrical or other power for a longer period than twenty-five years; limiting the right to the use of water appropriated for generating electricity or electrical or other power to the specific purposes for which it is appropriated; declaring certain water to be unappropriated; providing for the granting of licenses to divert and store surplus and flood waters for generating electricity, or electrical or other power and declaring what is surplus water; reserving to the state the right to regulate and fix the rates of compensation for which electricity or electrical or other power generated by water appropriated may be sold, rented or distributed; reserving to the state the right to impose charges for the use of water appropriated for electricity or electrical or other power and fixing fees and charges; preventing the combination or formation of any unlawful trust by appropriators of water or the use of water for generating electricity or electrical or other power and providing a penalty therefor; creating and establishing a state board of control; providing the powers and duties of said board of control and fixing their compensation; compelling persons, firms, associations and corporations supplying electricity or electrical or other power generated by the use of appropriated water to keep their plants and systems in repair and requiring an annual report from them to said board of control; providing for the appointment and compensation of employees and assistants to said board of control; limiting the expenses of said board of control and

fixed in said order, and testify or produce the required papers, maps, books, accounts or documents, or both testify and produce; and upon failure to obey said order said witness shall be dealt with as for contempt of court.

(c) The state water commission or any commissioners or commissioner, or any party to the proceeding before the commission or any commissioners or any commissioner, may in any investigation or hearing before the commission or any commissioners or any commissioner cause the deposition of witnesses residing within or without the state to be taken in the manner prescribed by law for depositions in civil actions in the superior courts of this state.

(d) No person shall be excused from testifying or from producing any book, map, document, paper or account in any investigation or inquiry by or hearing before the commission or any commissioners or commissioner upon the ground that the testimony or evidence, book, map, document, paper or account required of him may tend to incriminate him or subject him to penalty or forfeiture. But no person shall be prosecuted, punished or subjected to any penalty or forfeiture for or on account of any act, transaction, matter or thing material to the matter under investigation by said commission, or any commissioners, or any commissioner concerning which he shall have been compelled to testify or to produce documentary evidence; *provided*, that no person so testifying or producing shall be exempt from prosecution and punishment for any perjury committed by him in his testimony.

SEC. 5. A full and accurate record of business or acts performed or of testimony taken by the commission or any member or members thereof in pursuance of the provisions of this act shall be kept and be placed on file in the office of said water commission.

SEC. 6. The state water commission shall take, charge and collect the following fees: for copies and records not required to be certified or otherwise authenticated by the commission, ten cents for each folio; for certified copies of official documents and orders filed in its office, fifteen cents for each folio, and one dollar for every certificate under seal affixed thereto; for certified copies of evidence and proceedings before the commission, fifteen cents for each folio. The commission may fix reasonable charges for publications issued under its authority. All fees charged and collected under this section shall be paid, at least once each week, accompanied by a detailed statement thereof, into the treasury of the state.

SEC. 7. For the purpose of carrying out the provisions of this act the state water commission is authorized to pass such necessary rules and regulations as it may from time to time deem advisable, and to appoint and remove at its pleasure a secretary who shall have charge of its books and records and perform such other duties as from time to time may be prescribed and whose salary shall be fixed by the water commission; and the state water commission may also employ such expert, technical and clerical assistance, and upon such terms, as it may deem proper.

SEC. 8. For the purpose of carrying out the provisions of this act the sum of fifty thousand dollars is hereby appropriated for the fiscal years 1913-1914 and 1914-1915 out of any money in the state treasury not otherwise appropriated; and the state controller is hereby authorized and directed to draw warrants upon such sum from time to

time upon the requisition of the state water commission approved by the state board of control, and the state treasurer is hereby authorized and directed to pay such warrants.

SEC. 9. All indebtedness incurred for salaries, and all necessary costs in traveling and other expenses of said commission, and each of its members and persons employed by it, while actually engaged in the business of said commission, shall be paid by the state out of the funds hereby appropriated, upon the sworn statement of the person or persons incurring such indebtedness, and upon the requisition of the state water commission, approved by the state board of control, and the state controller is hereby authorized to draw warrants upon the state treasurer for said indebtedness, salaries, costs and expenses, as provided by law for the payment of similar costs and expenses and the drawing of similar warrants.

SEC. 10. The state water commission is hereby authorized and empowered to investigate for the purpose of this act all streams, stream systems, portions of stream systems, lakes, or other bodies of water, and to take testimony in regard to the rights to water or the use of water thereon or therein, and to ascertain whether or not such water, or any portion thereof, or the use of said water or any portion thereof, heretofore filed upon or attempted to be appropriated by any person, firm, association, or corporation, is appropriated under the laws of this state.

SEC. 11. All water or the use of water which has never been appropriated, or which has been heretofore appropriated and which has not been in process, from the date of the initial act of appropriation, of being put, with due diligence in proportion to the magnitude of the work necessary properly to utilize for the purpose of such appropriation such water or the use of water, or which has not been put, or which has ceased to be put to some useful or beneficial purpose, or which may hereafter be appropriated and cease to be put, to the useful or beneficial purpose for which it was appropriated, or which in the future may be appropriated and not be, in the process of being put, from the date of the initial act of appropriation, to the useful or beneficial purpose for which it was appropriated, with due diligence in proportion to the magnitude of the work necessary properly to utilize for the purpose of such appropriation such water or the use of water, is hereby declared to be unappropriated. And all waters flowing in any river, stream, canyon, ravine or other natural channel, excepting so far as such waters have been or are being applied to useful and beneficial purpose upon, or in so far as such waters are or may be reasonably needed for useful, and beneficial purposes upon lands riparian thereto, or otherwise appropriated, is and are hereby declared to be public waters of the State of California and subject to appropriation in accordance with the provisions of this act. If any portion of the waters of any stream shall not be put to a useful or beneficial purpose to or upon lands riparian to such stream for any continuous period of ten consecutive years after the passage of this act, such non-application shall be deemed to be conclusive presumption that the use of such portions of the waters of such stream is not needed upon said riparian lands for any useful or beneficial purpose; and such portion of the waters of any stream so non-applied, unless otherwise appropriated for a useful and beneficial purpose is hereby declared to be in the use of the state and subject to appropriation in accordance with the provisions of this act.

In any case where a reservoir or reservoirs have been or shall hereafter under the provisions of this act be constructed or surveyed, laid out and proposed to be constructed for the storage of water for a system, which water is to be used at one or more points under appropriations of water heretofore or hereafter made, which appropriations and rights thereunder are now, or shall hereafter be held and owned by the person or corporation owning such reservoir site or sites and constructing such reservoir or reservoirs, such reservoir or reservoirs and appropriations and rights shall, in the discretion of the state water commission, constitute a single enterprise and unit, and work of constructing such reservoir or reservoirs, or any of them, or work on any one of such appropriations shall, in the discretion of said commission, be sufficient to maintain and preserve all such applications for appropriations and rights thereunder.

SEC. 12. The state water commission shall have authority to, and may, for good cause shown, upon the application of any appropriator or user of water under an appropriation made and maintained according to law prior to the passage of this act, prescribe the time within which the full amount of the water appropriated shall be applied to a useful or beneficial purpose; *provided*, that said appropriator or user shall have proceeded, with due diligence in proportion to the magnitude of the project, to carry on the work necessary to put the water to a beneficial use; and in determining said time said commission shall grant a reasonable time after the construction of the works or canal or ditch or conduits or storage system used for the diversion, conveyance or storage of water; and in doing so said commission shall also take into consideration the cost of the application of such water to the useful or beneficial purpose, the good faith of the appropriator, the market for water or power to be supplied, the present demand therefor, and the income or use that may be required to provide fair and reasonable returns upon the investment and any other facts or matters pertinent to the inquiry. Upon prescribing such time the state water commission shall issue a certificate showing its determination of the matter. For good cause shown, the state water commission may extend the time by granting further certificates. And, for the time so prescribed or extended, the said appropriator or user shall be deemed to be putting said water to a beneficial use.

And if at any time it shall appear to the state water commission, after a hearing of the parties interested and an investigation, that the full capacity of the works built or constructed, or being built or constructed, under an appropriation of water or the use thereof made under the provisions of this act has not developed or can not develop the full capacity of the stream at the point where said works have been or are being built or constructed, and that the holder of the said appropriation will not or can not, within a period deemed to be reasonable by the commission, develop the said stream at said point to such a capacity as the commission deems to be required by the public good, then and in that case the said commission, in its discretion, may permit the joint occupancy and use, with the holder of the appropriation, to the extent necessary to develop the stream to its full capacity or to such portion of said capacity as may appear to the state water commission to be advisable, by any and all persons, firms, associations, or corporations applying

therefor, of any dam, tunnel, diversion works, ditch, or other works or constructions already built or constructed or in process of being built or constructed under this act; *provided*, that said commission shall take into consideration the reasonable cost of the original and new work, the good faith of the applicant, the market for water or power to be supplied by the original and the new work, and the income or use that may be required to provide fair and reasonable returns upon such cost; *provided, further*, that the applicant or applicants shall be required to pay to the party or parties owning said dam, tunnel, diversion works, ditch, or other works or constructions a pro rata portion of the total cost of the old and the new works, said pro rata portion to be based upon the proportion of the water used by the original and the subsequent users of said dam, tunnel, division works, ditch, or other works or constructions, if the water is used or to be used for irrigation or domestic purposes; or, if the water is used or to be used for the generation of electricity or electrical or other power the said pro rata proportion shall be based upon the relative amount of electricity or electrical or other power capable of being developed by the original and the new works; or, if a portion of the water utilized under a joint occupancy of any dam, tunnel, diversion works, ditch or other works or construction, shall be used for the purpose of irrigation and another portion of said water shall be used for the generation of electricity or electrical or other power, then and in that case the applicant or applicants for joint occupancy shall be required to pay to the party or parties owning said dam, tunnel, diversion works, ditch, or other works or constructions a pro rata portion of the total cost of the old and new works, said pro rata portion to be based upon the proportion of the relative amount of water used by each joint occupant and the income derived by each said joint occupant from said joint occupancy; or, if any of the waters used under such joint occupancy shall be utilized for purposes other than those specified above, then and in that case the applicant or applicants for such joint occupancy shall be required to pay to the party or parties owning said dam, tunnel, diversion works, ditch, or other works or constructions, such a pro rata portion of the total cost of the old and new works as shall appear to the state water commission to be just and equitable. Said applicant or applicants shall also be required to pay a proper pro rata share, based as above, of the cost of maintaining said dam, tunnel, diversion works, ditch or other works or constructions, on and after beginning the occupancy and use thereof. Furthermore, the state water commission if it appears to the said commission that the full capacity of the works built or constructed, or being built or constructed, under an appropriation of water or the use thereof under this act, will not develop the full capacity of the stream at that point, and it appears to the commission that the public good requires it, and the commission specifically so finds after investigation and hearing of the parties interested, may permit any person, firm, association or corporation to repair, improve, add to, supplement, or enlarge, at his or its proper cost, charge and expense, any dam, tunnel, diversion works, ditch, or other works or constructions already built or constructed or in process of being built or constructed under the provisions of this act, and to use the same jointly with the owners thereof; *provided*, that the said repairing, improving, adding to, supplementing, or enlarging, shall not materially interfere with the proper use thereof

by the owner of said dam, tunnel, diversion works, ditch, or other works or constructions or shall not materially injure said dam, tunnel, diversion works, ditch or other works or constructions. And the state water commission shall determine the pro rata and other costs provided for in this section.

SEC. 13. All rights granted or declared by this act shall be ascertained, adjudicated and determined in the manner and by the tribunals as provided in this act.

SEC. 14. This act shall not be held to bestow, except as expressly provided in this act, upon any person, firm, association or corporation, any right where no such right existed prior to the time this act takes effect.

SEC. 15. The state water commission shall allow, under the provisions of this act, the appropriation of unappropriated water or of the use thereof, or of water or of the use thereof which may hereafter cease to be appropriated or which may hereafter be declared to be unappropriated, or which, having been used under claim of riparian proprietorship or appropriation finds its way back into a stream, lake or other body of water and also such water as is declared under section eleven of this act to be subject to appropriation.

SEC. 16. Every application for a permit to appropriate water shall set forth the name and post-office address of the applicant, the source of water supply, the nature and amount of the proposed use, the location and description of the proposed headworks, ditch, canal and other works; the proposed place of diversion and the place where it is intended to use the water; the time within which it is proposed to begin construction, the time required for completion of the construction, and the time for the complete application of the water to the proposed use. If for agricultural purposes, the application shall, besides the above general requirements, give the legal subdivisions of the land and the acreage to be irrigated, as near as may be; if for power purposes, it shall give, besides the general requirements prescribed above, the nature of the works by means of which the power is to be developed, the head and amount of water to be utilized, and the use to which the power is to be applied; if for storage in a reservoir, it shall give, in addition to the general requirements prescribed above, the height of dam, the capacity of reservoir, and the use to be made of the impounded waters; if for municipal water supply, it shall give, besides the general requirements specified above, the present population to be served, and, as near as may be, the future requirements of the city; if for mining purposes, it shall give, in addition to the general requirements prescribed above, the nature and location of the mines to be served and the methods of supplying and utilizing the water. All applications shall be accompanied by as many copies of such maps, drawings, and other data as may be prescribed or required by the state water commission, and such maps, drawings, and other data shall be considered as part of the application. If any permittee or licensee, or the heirs, successors, or assigns of any permittee or licensee, desire to change the point of diversion from the point of diversion specified in the original application, or after the granting of any permit or license, such change or changes may be made only upon the permission of the state water commission; *provided*, that, before granting such permission, such applicant must establish, to the satisfaction of the state water commission, and

such commission must so find, that such change in the place of diversion will not operate to the injury of any other appropriator or legal user of such waters before permitting such change in the place of the diversion. Upon receipt of application for permission to make such change in the place of diversion, the commission shall, by order, fix a time within which any person interested may appear in opposition to such application, and such applicant shall, if the commission so require, cause to be published at least once a week for four consecutive weeks, in a newspaper or newspapers of general circulation in the county in which is situated both the old and new points of diversion, a copy of said order. Proof of such publication shall be by affidavit of the publisher of such newspaper. Should any objection be made to the change in point of diversion so applied for, the state water commission shall fix a time for the hearing of said application and of the objections thereto, which time shall be not less than thirty days nor more than sixty days after the period of said publication, and upon such hearing the said commission shall grant or refuse, as the facts shall warrant, such permission to change place of diversion.

SEC. 17. Any person, firm, association or corporation may apply for and secure from the state water commission, in conformity with this act and in conformity with reasonable rules and regulations adopted from time to time by the state water commission, a permit for any unappropriated water or for water which having been appropriated or used flows back into a stream, lake or other body of water within this state. And any application so made shall give to the applicant a priority of right as of the date of said application to such water or the use thereof until such application shall have been approved or rejected by said commission; *provided*, that such priority shall continue only so long as the provisions of law and the rules and regulations of the water commission shall be followed by the applicant. Upon the approval of any application by the commission, said approval shall give priority of right as of the date of said application, and shall give the right to take and use the amount of water specified in said approval until the issuance by the state water commission of a license for the use of said amount of water, or until the said commission refuses to issue said license. But the approval of any application shall give the right to take and use water only to the extent and for the purpose allowed in said approval; *provided*, that any defective application made in a bona fide attempt to conform to the rules and regulations of the state water commission and to the law shall secure to the applicant a priority of right as of the date of said application until he shall have been notified by said commission in what respect his application is defective. And said applicant shall be allowed sixty days after notice of said defect in which to file an amended and perfected application. If, within said sixty days, said applicant shall not file an amended and perfected application, said priority of right shall cease and determine, unless for good cause shown the state water commission shall allow said applicant to file a further amended and perfected application; *provided, also*, that any priority of right secured under this section shall not be effective for more than thirty days after service of notice of such approval, personally or by registered mail, on the applicant, unless within said period of thirty days a true copy of said approval upon which such priority is based shall have been filed in the office of

the recorder of the county or city and county in which the water is to be diverted, and, within ten days thereafter, a certificate of such filing by the county recorder is also filed with the state water commission.

SEC. 18. Actual construction work upon any project shall begin within such time after the date of the approval of the application as shall be specified in said approval which time shall not be less than sixty days from date of said approval, and the construction of the work thereafter shall be prosecuted with due diligence in accordance with this act, the terms of the approved application, and the rules and regulations of said commission; and said work shall be completed in accordance with law, the rules and regulations of the state water commission, and the terms of the approved application and within a period specified in the permit; but the period of completion specified in the permit may, for good cause shown, be extended by the state water commission. And if such work be not so commenced, prosecuted and completed, the water commission shall, after notice in writing and mailed in a sealed, postage-prepaid and registered letter addressed to the applicant at the address given in his application for a permit to appropriate water, and a hearing before the commission, revoke its approval of the application. But any applicant, the approval of whose application shall have been thus revoked, shall have the right to bring an action in the superior court of the county in which is situated the point of proposed diversion of the water for a review of the order of the commission revoking said approval of the application. And thirty days after the revocation of said permit all rights of the said permittee under said permit shall cease and lapse, unless said permittee shall within said thirty days after said revocation bring an action in the superior court for a review of the order of revocation. The priority of right of any permittee so bringing an action shall continue under said permit until a final judgment is rendered as to the reasonableness of the revocation of said permit. But until and unless the revocation of the permit shall be finally decreed by such court, the permittee shall not take or use any of the water the right to take and use which is granted by said permit.

SEC. 19. Immediately upon completion, in accordance with law, the rules and regulations of the state water commission, and the terms of the permit, of the project under such application, the holder of a permit for the right to appropriate water shall report said completion to the state water commission. The said commission shall immediately thereafter cause to be made a full inspection and examination of the works constructed and shall determine whether the construction of said works is in conformity with law, the terms of the approved application, the rules and regulations of the state water commission, and the permit. The said water commission shall, if said determination is favorable to the applicant, issue a license which shall give the right to the diversion of such an amount of water and to the use thereof as may be necessary to fulfill the purpose of the approved application. Said license shall be in such form as may be prescribed by the state water commission under the provisions of this act. But if the said commission shall find, upon inspection and examination of the works constructed, that the construction and condition of said works are not in conformity with the law, the rules and regulations of the state water commission, the

terms of the approved application and the terms of the permit, then and in that case the said commission may, after due notice in writing and in the manner provided in sections one thousand and eleven, one thousand and twelve, and one thousand and thirteen of the Code of Civil Procedure to the applicant or the holder of the permit, and a public hearing thereon, refuse to issue said license. And thirty days after the refusal of said commission to issue said license all rights of the applicant and the holder of the permit under said application and permit shall lapse and cease. But the holder of any permit to whom the said water commission may have refused to issue said license, shall have the right to bring an action within thirty days after the said refusal, in the superior court to review said order and to obtain a decree requiring the issuance of such license. And the rights of the holder of any permit so bringing an action shall continue under said permit until the decree in such action has been entered and become final. But until the refusal of the commission to issue said license shall be finally determined by the courts, the permittee shall not take or use any of the water, the taking and using of which is granted to him by said permit. And if the holder of any permit which has been revoked by the state water commission shall not bring an action within said thirty days in the superior court to determine the validity of said revocation, then and in that case all rights of the applicant and of the holder of said permit shall lapse and cease.

SEC. 20. All permits and licenses for the appropriation of water shall be under the terms and conditions of this act, and shall be effective for such time as the water actually appropriated under such permits and licenses shall actually be used for the useful and beneficial purpose for which said water was appropriated, but no longer; and every such permit or license shall include the enumeration of conditions therein which in substance shall include all of the provisions of this section and likewise the statement that any appropriator of water, to whom said permit or license may be issued, shall take the same subject to such conditions as therein expressed: *provided*, that if, at any time after the expiration of twenty years after the granting of a license, the state, or any city, city and county, municipal water district, irrigation district, lighting district, or any political subdivision of the state shall have the right to purchase the works and property occupied and used under said license and the works built or constructed for the enjoyment of the rights granted under said license: and in the event that the said state, city, city and county, municipal water district, irrigation district, lighting district or political subdivision of the state so desiring to purchase and the said owner of said works and property can not agree upon said purchase price, said price shall be determined in such manner as is now or may hereafter be determined in eminent domain proceedings. If it shall appear to the state water commission at any time after a permit or license is issued as in this act provided that the permittee or licensee, or the heirs, successors, or assigns of said permittee or licensee, has not put the water granted under said permit or license to the useful or beneficial purpose for which the permit or license was granted, or that the permittee or licensee, or the heirs, successors, or assigns of said permittee or licensee, has ceased to put said water to such useful or beneficial purpose, or that the permittee or licensee, or the heirs, successors or assigns of said permittee or licensee, has failed to observe

any of the terms and conditions in the permit or license as issued, then and in that case the said commission, after due notice to the permittee, licensee, or the heirs, successors or assigns of such permittee or licensee, and a hearing thereon, may revoke said permit or license and declare the water to be unappropriated and open to further appropriation in accordance with the terms of this act. And the findings and declaration of said commission shall be deemed to be prima facie correct until modified or set aside by a court of competent jurisdiction; *provided*, that any action brought so to modify or set aside such finding or declaration must be commenced within thirty days after the service of notice of said revocation on said permittee or licensee, his heirs, successors or assigns. And every licensee or permittee under the provisions of this act if he accept such permit or license shall accept the same under the conditions precedent that no value whatsoever in excess of the actual amount paid to the state therefor shall at any time be assigned to or claimed for any permit or license granted or issued under the provisions of this act, or for any rights granted or acquired under the provisions of this act, in respect to the regulation by any competent public authority of the services or the price of the services to be rendered by any permittee or licensee, his heirs, successors or assigns or by the holder of any rights granted or acquired under the provisions of this act, or in respect to any valuation for purposes of sale to or purchase, whether through condemnation proceedings or otherwise, by the state or any city, city and county, municipal water district, irrigation district, lighting district or any political subdivision of the state, of the rights and property of any permittee or licensee, or the possessor of any rights granted, issued, or acquired under the provisions of this act. The application for a permit by municipalities for the use of water for said municipalities or the inhabitants thereof for domestic purposes shall be considered first in right, irrespective of whether they are first in time; *provided, however*, that such application for a permit or the granting thereafter of permission to any municipality to appropriate waters, shall not authorize the appropriation of any water for other than municipal purposes; *and provided further* that where permission to appropriate is granted by the state water commission to any municipality for any quantity of water in excess of the existing municipal needs therefor, that pending the application of the entire appropriation permitted, the state water commission shall have the power to issue permits for the temporary appropriation of the excess of such permitted appropriation over and above the quantity being applied from time to time by such municipality; *and providing further*, that in lieu of the granting of such temporary permits for appropriation, the state water commission may authorize such municipality to become as to such surplus a public utility, subject to the jurisdiction and control of the railroad commission of the State of California for such period or periods from and after the date of the issuance of such permission to appropriate, as may be allowed for the application to municipal uses of the entire appropriation permitted; *and provided, further*, that when such municipality shall desire to use the additional water granted in its said application it may so do upon making just compensation for the facilities for taking, conveying and storing such additional water rendered valueless for said purposes, to the person,

firm or corporation which constructed said facilities for the temporary use of said excess waters, and which compensation, if not agreed upon between the municipality and said person, firm or corporation, may be determined in the manner provided by law for determining the value of property taken by and through eminent domain proceedings.

SEC. 21. Nothing herein contained shall be construed to deprive the state or any city, city and county, municipal water district, irrigation district, lighting district or political subdivision of the state, or any person, company or corporation of any rights which, under the law of this state they may have, to acquire property by or through eminent domain proceedings.

SEC. 22. Licenses hereafter granted for water or use of water shall be subject to the right of the state to impose the fees and charges provided in this act.

SEC. 23. Every person, firm, association or corporation making application for a permit to appropriate water or the use of water under this act shall pay to the state water commission, at the time of filing said application, if the purpose or use is for the generation of electricity, or electrical or other power, a fee of two dollars and fifty cents for each theoretical horsepower capable of being developed by the works up to one hundred theoretical horsepower, with a minimum fee of twenty-five dollars, and above said one hundred theoretical horsepower the fee shall be five hundred dollars up to and including ten thousand theoretical horsepower, and one thousand dollars above ten thousand theoretical horsepower capable of being so developed or a fee of ten dollars if the purpose be other than for the generation of electricity, or electrical or other power. Every person, firm, association or corporation at the time of receiving a license to appropriate water or the use of water, if the purpose be for the generation of electricity, or electrical or other power, shall pay to said commission when the said license is issued, and annually thereafter, a charge of twenty-five cents for each theoretical horsepower capable of being developed by the proposed works. If the purpose of use is for other than the generation of electricity, or electrical or other power, every person, firm, association or corporation receiving a license to appropriate water shall pay to the said commission when said license is issued, and annually thereafter, a charge of ten cents per miner's inch for each miner's inch specified in the license, and for the purpose of this act forty miner's inches shall be equivalent to one cubic foot per second; *provided, however*, that no annual charge shall be made when the appropriation is made for use for irrigation purposes upon lands, not exceeding one hundred and sixty acres in area, to be actually occupied by such appropriator and cultivated in whole or in part by him, or when said water is used for mining purposes, and the amount of water so used for such mining purposes does not exceed five hundred miner's inches, or when the water is used for the generation of power when the same does not exceed fifty horsepower and is for the private use of the appropriator. And all such fees and charges shall forthwith be paid into the state treasury by the state water commission, and the fee and annual charges provided in this section shall be subject to change by law at not less than ten year intervals beginning with the date of the license issued by the state water commission.

SEC. 24. Upon its own initiative or upon petition signed by one or more claimants to water or the use of water upon any stream, stream system, lake, or other body of water, requesting the ascertainment of the relative rights of the various claimants to the water or the use of water of that stream, stream system, lake or other body of water, it shall be the duty of the state water commission, if, upon investigation it finds the facts and conditions are such as to justify, to make an ascertainment of the said rights, fixing a time for the beginning of the taking of testimony and the making of such investigation as will enable it to ascertain the rights of the various claimants. In case suit is brought in the superior court for determination of rights to water or the use of water, the case may, in the discretion of the court, be transferred to the state water commission for investigation, as referee. In any case wherein the water commission shall proceed to investigate or ascertain water rights the said commission shall notify in writing in the manner provided in sections one thousand and eleven, one thousand and twelve and one thousand and thirteen of the Code of Civil Procedure all persons, firms, associations or corporations claiming or possessing any water rights which are to be the subject of ascertainment by the said commission.

SEC. 25. Upon the completion of the taking of testimony and evidence by the state water commission, the said commission shall immediately give notice by registered mail to the various claimants or possessors of water rights that, at a date and place named in the said notices, which date shall not be less than fifteen days nor more than thirty days later than the date of said notice, all of said testimony and evidence will be open to public inspection. And said testimony and evidence shall be held open to public inspection at said places for a specified period of not less than thirty days nor more than ninety days, and thereafter the said commission shall cause its findings and ascertainment of the rights of the respective claimants to said water to be made and filed in the superior court in each of the counties where said water is appropriated.

SEC. 26. If any person, firm, association or corporation claiming or possessing any interest in or right to the waters of any stream, stream system, lake or other body of water involved in any investigation or ascertainment by the state water commission of the rights to the water of said stream, stream system, lake or other body of water, desires to contest any of the interests in or rights to any of the said waters of any other person, firm, association or corporation such person, firm, association or corporation desiring so to contest shall, within ten days after the expiration of the period for public inspection prescribed in section twenty-five of this act, notify, in writing, the state water commission of said desire so to contest. Said notice shall state the grounds of contest, which shall be verified by the oath of the contestant, his agent or attorney. Within ten days of the receipt of the notice of contest the state water commission shall notify the contestant and the person, firm, association or corporation whose rights are contested to appear before it at a time and place specified in said notice, and that at said time and place said contest will be heard; *provided*, that said time shall not be less than thirty days nor more than sixty days from the date of the service of the notice of the commission; *provided, further*, that if any

person, firm, association or corporation desires to contest any such ascertainment by the state water commission as hereinbefore provided, such contest may be brought as provided in sections 31 and 32 hereof.

SEC. 27. Said notice by said water commission shall be served and return made thereon in the same manner in which summons and return thereon are made in civil actions in the superior courts of this state. The water commission shall have power to adjourn hearings of contest from time to time upon reasonable notice to all parties in interest, and to issue subpoenas for and compel the attendance of witnesses to testify before it and produce papers, books, maps and other documents.

SEC. 28. The state water commission shall require from the party bringing the contest before it under section twenty-six of this act a deposit of five dollars for each day it shall be engaged in taking testimony in such contest. Upon the final ascertainment by the state water commission in any contest, the said commission shall enter an order directing the return of the deposit to the depositor if the contest shall be determined in his favor, but, if the contest shall be determined against the person bringing it, the said deposit shall be immediately paid into the state treasury.

SEC. 29. Not less than fifteen days nor more than thirty days after the expiration of the period during which the testimony and evidence is to be kept open for public inspection, or if any contest shall be made, not less than fifteen days nor more than thirty days after the settlement of said contest by the water commission, the testimony and evidence in the original hearing and the testimony and evidence taken in said contest shall be filed in the office of the water commission.

SEC. 30. The water commission may, in its discretion and in addition to the testimony and evidence submitted to it by the parties claimant to or possessors of water rights on any stream, stream system, lake or other body of water cause to be made an examination of said stream, stream system, lake or other body of water and the works diverting or utilizing water therefrom. Said examination may include the gathering of whatever data covering said stream, stream system, lake or other body of water and the various ditches and canals taking water therefrom as the said commission may require, as well as such other data and information as may, in the discretion of the said commission, be necessary to enable it properly to ascertain the relative rights of the parties claiming rights to use the waters of said stream, stream system, lake, or other body of water. The results of said examination shall be filed in the office of said commission and be open to public inspection as provided in this act for the filing and public inspection of other evidence of a like nature.

SEC. 31. As soon as practicable after the hearing of testimony and evidence, the hearing of contest, and the gathering and filing of such data and information as the water commission shall, of its own motion, direct to be gathered, the said water commission shall record in its office its ascertainment of and specific findings upon the rights of the several claimants to the use of the waters of any stream, stream system, lake or other body of water. Immediately thereafter, the said water commission shall file a certified copy of said ascertainment and specific findings together with the original evidence and testimony taken before it and all data and information gathered by its order with the clerk of the

superior court in and for the county in which such stream, stream system, lake or other body of water or any part thereof is situated.

SEC. 32. After the filing with the clerk of the superior court of the evidence, data, information, specific findings and ascertainment as required by section 31 of this act, the same shall be received in the superior court as prima facie evidence of the facts, specific findings and ascertainment therein set forth. And at any time within one year after such filing an action may be brought, upon the direction of the state water commission, by the attorney general in said superior court in which said evidence, data, information, specific findings and ascertainment shall have been so filed. Or an action may be brought in said court by any one or more of the possessors or claimants concerning whose rights to any of the waters of the stream, stream system, lake or other body of water the state water commission shall have made the specific findings and ascertainment filed in said court. Said action if brought by the attorney general shall be brought in the name and behalf of the people of the State of California to quiet the title of the State of California or the people thereof to any and all water or water rights which it may have in or on said stream, stream system, lake or other body of water, and, to cause all parties whose rights have been so ascertained to appear and interplead in said action in defense and determination of each and all their respective rights, which rights, as against the state and with regard to the different rights and priorities of said rights among themselves, shall be determined by the court in said action. And if an action be brought by any one or more of said claimants or possessors, said action may be brought in the name of the said possessor or claimant and to cause all parties, whose rights have been ascertained, to appear and interplead in said action in defense and determination of each and all of their respective rights, which rights, as against the state or the people thereof, and with regard to the different rights and priorities of said rights among themselves shall be determined by the court in said action. And from and after the filing of the complaint in such action, the proceedings therein shall be as in other cases heard and determined in said court, and in accordance with the provisions of the Code of Civil Procedure of this state; *provided*, that the evidence, data, information, specific findings and ascertainment so filed with the superior court as provided in section 31 of this act must be considered by said court in its determination of both or either of said actions, and the court may affirm, modify or reject such specific findings and ascertainment and may make other or different findings as in its judgment the evidence justifies.

SEC. 33. All existing lawful appropriations of water or the use thereof, shall be and hereby are respected and upheld to extent of the amount of water appropriated and actually put or in process of being put, from the initial date of the act of appropriation, with due diligence in proportion to the magnitude of the work necessary properly to utilize the water for the useful or beneficial purpose for which it was appropriated, or for which it is being used.

SEC. 34. Whenever proceedings shall be instituted for the ascertainment by the state water commission of rights to water or the use of water, it shall be the duty of all claimants interested therein and having notice thereof as in this act provided to appear and submit proof of their respective claims at the time and in the manner required by law; and any such claimant who shall fail to appear in such proceedings and submit proof of his claim shall be barred and estopped from subsequently asserting any rights theretofore acquired upon the stream, stream system, lake or other body of water, or portion of such stream, stream system, lake or other body of water, embraced in such proceedings, and shall be held to have forfeited all rights to said water or the use of water theretofore claimed by him on such stream, stream system, lake or other body of water, unless entitled to relief under the laws of this state: *provided*, that such proceedings shall result in an ascertainment by the state water commission and a decree by the superior court based upon such ascertainment and specific findings or a modification of said ascertainment or specific findings.

SEC. 35. In any suit wherein the state is or the people of the state are a party for the determination of a right to the use of the water of any stream, stream system, lake or other body of water, or of any portion of any stream, stream system, lake or other body of water, all who claim the right to use such water shall be made parties. When any such suit has been filed the court may call upon the state water commission to make or furnish a complete hydrographic survey of such stream, stream system, lake or other body of water, in order to obtain all the data necessary to the determination of the rights involved. The disbursements made in litigating the rights involved in such suit may be taxed by the court as in other equity suits, exclusive of the cost of such hydrographic survey.

SEC. 36. Upon the adjudication of the rights to the use of the water of a stream, or stream system, lake or other body of water, or any portion of a stream, stream system, lake or other body of water, a certified copy of the decree shall be prepared by the clerk of the court, without charge, and filed in the office of the state water commission, and said commission shall deliver to every party in such decree a certified copy thereof upon demand and the payment of the fees provided in this act. And the said commission shall file, for record, in the office of the recorder of each county in which any portion of said stream, stream system, lake or other body of water is situated, a certified copy of said decree. Said decree shall in every case declare as to the water right adjudged to each party, whether riparian or by appropriation, the extent, the priority, amount, purpose of use, point of diversion, and place of use of said water; and, as to water used for irrigation, such decree shall also declare the specific tracts of land to which it shall be appurtenant together with such other conditions as may be necessary to define the right and its priority. But the failure of any party entitled thereto to demand or receive a copy of said decree shall not be considered to have prejudiced him or his rights in any way.

SEC. 37. The power to supervise the distribution of water in accordance with the priorities established under this act, when such supervision does not contravene the authority vested in the judiciary of the state, is hereby vested in the state water commission.

SEC. 38. The diversion or use of water subject to the provisions of this act other than as it is in this act authorized is hereby declared to be a trespass, and the state water commission is hereby authorized to institute in the superior court in and for any county wherein such diversion or use is attempted appropriate action to have such trespass enjoined.

SEC. 39. Water or the use of water which has heretofore been appropriated or acquired, or which shall hereafter be appropriated or acquired for one specific purpose shall not be deemed to be appropriated or acquired for any other or different purpose. And any person, firm, association or corporation applying to the state water commission for a license to appropriate water or the use of water shall state in the application for said license the specific purpose to which it is proposed to put such water or the use thereof. Water heretofore or hereafter appropriated for other than domestic use, may be applied to domestic use, in whole or in part, without a separate and distinct appropriation being made therefor. And water appropriated for one purpose under the provisions of this act may be subsequently appropriated for other purposes under the provisions of this act; *provided*, that such subsequent appropriation shall not injure any previous appropriation.

SEC. 40. The state water commission is also authorized and empowered to investigate any natural situation available for reservoirs or reservoir systems for gathering and distributing flood or other waters not under beneficial use in any stream, stream system or lake or other body of water, and to ascertain the feasibility of such projects, including the supply of water that may thereby be made available, the extent and character of the areas that may be thereby irrigated, and make estimate of the cost of such project.

SEC. 41. Nothing in this act shall be construed as depriving any city, city and county, municipal water district, irrigation district or lighting district of the benefit of any law heretofore or hereafter passed for their benefit in regard to the appropriation or acquisition of water or the use of water; and nothing in this act shall affect or limit in any manner whatsoever the right or power of any municipality which has heretofore appropriated or acquired water or the use of water for municipal purposes, to use or to sell or otherwise dispose of such water or the use thereof, either within or without its limits for domestic, irrigation or other purposes, in accordance with laws in effect at the time of the passage of this act.

SEC. 42. The word "water" in this act shall be construed as embracing the term "or use of water"; and the term "or use of water" in this act shall be construed as embracing the word "water." Whenever the terms stream, stream system, lake or other body of water or water occurs in this act, such term shall be interpreted to refer only to surface water, and to subterranean streams flowing through known and definite channels. But nothing in this act shall be construed as giving or confirming any right, or title, or interest to or in the corpus of any water; *provided*, that the term "useful or beneficial purposes" as used in this

act shall not be construed to mean the use in any one year of more than two and one half acre feet of water per acre in the irrigation of uncultivated areas of land not devoted to cultivated crops.

SEC. 43. Nothing in this act shall be construed as depriving any person, firm, association or corporation of the right of appeal conferred under the laws of this state.

SEC. 44. All acts or parts of acts in conflict herewith are hereby repealed.

SEC. 45. This act shall be known as the "water commission act."

SEC. 46. If any section, subsection, sentence, clause or phrase of this act is for any reason held to be unconstitutional, such decision shall not affect the validity of the remaining portions of this act. The legislature hereby declares that it would have passed this act, and each section, subsection, sentence, clause and phrase thereof, irrespective of the fact that any one or more other sections, subsections, sentences, clauses or phrases be declared unconstitutional.

No. -----

Application for Permit to Appropriate the Public Waters of the State of California.

1. Name of applicant: -----

Post-office address: -----

County: ----- State: -----

(A) If applicant is an association or corporation give data
called for in rule 5 of rules of commission: -----

(B) The financial resources of applicant are:

(1) Cash on hand: -----

(2) Treasury stock: -----

(3) Bonds to be issued: -----

(4) Other resources: -----

2. The quantity of water claimed is ----- cubic feet per second.

3. Source of water supply: -----

4. Location of point of diversion by smallest legal subdivisions:

-----, County of -----

5. To be used for: -----

6. Nature of plant for development: -----

7. Location of plant, by legal subdivisions: -----

(a) Amount of power to be generated: -----

H. P. under ----- foot head.

(b) Is water to be returned to any stream? -----

(c) If so name stream and point of return -----

8. Estimate in detail of the cost of each unit of the works: -----

9. Description of works for diversion:

(a) Kind of works: -----

(Reservoir, dam, ditch, flume, pipes or otherwise.)

(b) Dimensions of works:

1. Height of dam ----- feet, length of dam at top
----- feet, length of dam at bottom ----- feet.

2. Material used in construction -----
(State whether wood, stone, earth or concrete.)

3. Estimated contents: ----- cubic yards.

4. Capacity of reservoir: ----- acre feet.

5. Size of headgate: Width ----- feet, height ----- feet.

6. Conduit ----- width at bottom ----- feet;

(State whether ditch, flume or pipe.)

width at water line ----- feet; depth of water ----- feet;

diameter of pipe ----- Average grade per mile is

----- feet. Length of conduit is ----- miles,

and it crosses the following quarter sections: -----

10. The time required for the completion of the construction of such
work is ----- years.

11. Time required for the complete application of the water to the proposed use is _____ additional years.

BE IT KNOWN, That the undersigned hereby makes application for a permit to appropriate the public waters of the State of California as herein set forth.

(Name of applicant.)

Signed in the presence of us as witnesses:

1. _____
(Name.) (Address.)
2. _____
(Name.) (Address.)

Remarks: _____

STATE OF CALIFORNIA, }
County of Sacramento. } ss.

This is to certify that we have examined the foregoing application with the accompanying maps and data, and _____

Witness our hands this _____ day of _____, 191____.

State Water Commission.

Permit No. _____

STATE OF CALIFORNIA, }
County of Sacramento. } ss.

This is to certify that we have examined the foregoing application and do hereby grant the same, subject to VESTED RIGHTS and the following limitations and conditions: _____

Actual construction work shall begin within six months from this date and shall be prosecuted with reasonable diligence in proportion to the magnitude of the undertaking, and if not so commenced and prosecuted this permit may be revoked.

The amount of water appropriated shall be limited to the amount which can be applied to beneficial use and not to exceed _____ cubic feet per second.

Said construction work shall be completed on or before _____

Complete application of the water to the proposed use shall be made on or before _____

Witness our hands this _____ day of _____, 191____.

State Water Commission.

EXHIBIT "D."

THE STATE WATER COMMISSION, STATE OF CALIFORNIA.

Result of Procedure for Hearings on Applications for Appropriation
of Water for Generating Electricity, Electrical or Other
Power, in Accordance with Chapter 41, Laws
of 1911 (Extra Session); Approved
January 2, 1912.

October 1, 1913.

The following rules of procedure for the government of hearings before this Commission are hereby prescribed, to take effect from this date.

None of said rules shall, however, be construed to deprive the Water Commission of its right to exercise the directory and mandatory powers conferred upon it by law.

STATE WATER COMMISSION.

CHAS. D. MARX, *Chairman*.

HAROLD T. POWER.

S. C. GRAHAM.

RULES AND REGULATIONS.

NOTICE OF INTENTION TO APPROPRIATE WATER.

Rule 1. Any person, firm, association or corporation desiring to appropriate water, or the use thereof, for the purpose of generating electrical or other power, shall file with this Commission a notice of intention to so appropriate. Said notice shall contain the following items:

- (a) Name and post-office address of intending appropriator.
- (b) Amount of water to be appropriated.
- (c) Proposed method of diversion.
- (d) Name of stream.
- (e) Purpose used.
- (f) Approximate location, in the smallest legal subdivision of the proposed point of diversion.

Upon the receipt of such notice of intention to appropriate, the Commission will issue to the person filing such notice a preliminary permit for a definite period of time sufficient for the gathering of the data and making of surveys required to be filed with the formal application for a permit to appropriate, which time may be reduced or extended at the discretion of the Commission.

Rule 2. Such work shall be prosecuted with due diligence, and a completed formal application for the use of said water filed with this Commission within the time limited by the preliminary permit. Upon the granting of a permit to use such water, the right of the applicant shall relate back to the date on which he filed the notice of intention to appropriate.

Rule 3. In the event such gathering of data and making of surveys is not prosecuted with due diligence or if it shall appear to the Commission that the preliminary permittee is speculating, or attempting to speculate, in such preliminary permit, the same shall be canceled and

permittee shall have no further right to or priority in the use of the water sought to be appropriated.

FORMAL APPLICATION GENERALLY.

Rule 4. The formal application for a permit to use water for the generation of electricity, or electrical or other power, shall be filed with the Commission before the commencement of any building, buildings, power house, ditch, canal or other distributing or controlling works, or performing any work in connection with any intended appropriation of water for power purposes (except the making of surveys and gathering of field notes and other data) and shall contain the items herein prescribed.

Rule 5. If applicant is an association of individuals, there shall accompany the application a certified copy of the articles of association; if there be no articles, that fact must be stated over the signature of each member of the association. If the applicant is an incorporated company the application must be accompanied by the following papers:

(a) A copy of the articles of incorporation, duly certified to by the officer having custody of the original thereof.

(b) In cases where the company is incorporated outside of the State of California, it must submit the certificate of the proper officer of this State, to the effect that it has complied with the laws of California governing foreign corporations, to the extent required to entitle the company to operate in this State.

(c) A true list, signed by the secretary of the corporation, under seal of the company, showing the names and designations of its officers and directors at the date of the filing of the items by this regulation required. Also a complete list of the stockholders and a general statement as to the consideration paid for such stock.

APPLICATIONS FOR ONE HUNDRED HORSEPOWER OR LESS.

Rule 6. Applications for permits to use water for the generation of electricity to the extent of one hundred horsepower, total capacity, or less, shall contain the following items, in addition to those required by Rule 5 hereof:

(a) Maps showing the location of dams, reservoirs, conduits, power houses or other works.

(b) Field notes of the survey in duplicate.

(c) A statement in triplicate of the amount of water to be diverted for use, the maximum capacity of the diversion works and the total average static and effective heads to be utilized.

(d) The Commission may, however, require more, or less, data than is above called for, as each particular case may demand.

(e) The map shall consist of one original on tracing linen and three print copies and shall not be larger than 28 by 40 inches or smaller than 24 by 36 inches and may be on any convenient scale. This map shall show for each reservoir site, the distance and bearing of the initial point of survey from the nearest existing corner of the public survey, the location of the maximum flow line, and the area and available storage capacity of the reservoir; for each water conduit line, the distances and bearing of each terminus from the nearest corner of the public survey, the location of the center line of the conduit, its length, and the intersection of the center line with the section lines of the public land survey and boundaries

of National Forests and other reservations of the United States; and for each power house site, the distance and bearing of the initial point of survey from the nearest corner of the public survey, the location of the exterior boundaries of the site and the area. If on unsurveyed land, the distances and bearings may, if the nearest existing corner of the public survey is more than 2 miles distant, be taken from a permanent mark on some natural object, or permanent monument, that can readily be found and recognized. The field notes shall give an accurate description of the natural object or monument and full data of traverse.

APPLICATIONS FOR ONE HUNDRED HORSEPOWER OR MORE.

Rule 7. Applications for permits to use waters for the generation of electricity to the extent of more than one hundred horsepower, total capacity, shall contain, in addition to those required by Rule 5 hereof, the following items:

(a) Maps of location and plans of structures on tracing linen, with three print copies cut to uniform size, not larger than 28 by 40 inches and not smaller than 24 by 36 inches, with graphical scale not less than six inches in length drawn thereon. Separate sheets shall be used for maps of location whenever the whole survey can not be shown upon a single sheet.

(b) The following maps and plans shall be submitted for each reservoir that will be a part of the power project, or projects, applied for: (1) A contour map of each reservoir site, dam and dam site on a scale of not more than 400 feet to the inch, with a contour interval of not more than 10 feet. The contour for each reservoir site shall show the highwater flow line and in case the reservoir is to be used in whole or in part for diversion purposes, the flow line fixed by the estimated average effective head, and also a table of areas and capacities for each flow line and each contour line; (2) A cross-section of each dam site along the center line of the proposed dam, with a graphical log properly located thereon of each boring, test pit, or other exploration, and a brief statement of the character and dip of the underlying material; (3) Plans, elevations and cross-sections of the dams, showing spillways, sluiceways or sluice pipes, and other outlet works; and also a statement of the volume of the dam, the character of the materials used, and the type of construction.

(c) The following maps and plans shall be submitted for the entire length of each water conduit, from intake to tail race outlet, that will be a part of the power project, or projects applied for: (1) A contour map and profile of the entire water-conduit location on a scale of not more than 400 feet to the inch, with contour interval of not more than 10 feet. The contours shall cover either an area of 100 feet in length on each side of the center line of the water conduit or a difference in elevation of at least 25 feet above and below the grade line of the conduits. This map shall show the transit line of the survey and the center line of the proposed final location of the water conduit, including curves between tangents. This map shall also show what sections of this water conduit will be in flume, ditch, tunnel, pipe, etc., and the grade of each section; (2) Plans, elevations and cross-sections of each type

of water conduit, showing material, dimensions, grades, flow lines, and capacity and plans and elevations of intake works and forebay.

(d) A contour map on a scale of not more than 50 feet to the inch, with a contour interval of not more than 5 feet, showing the proposed location of the power house, other buildings, etc., shall be filed for each power house site that will be a part of the power project or projects applied for. This map shall also state the proposed type and number and rated capacity of the water wheels and generators used.

(e) A general map of the entire power project or projects applied for (except transmission lines) on such a scale that the entire survey may be shown upon a single sheet.

(f) Copies of field notes in triplicate of the entire final location survey of water conduits, the exterior boundaries of power houses and reservoir sites, and all reference lines to public land corners.

(g) Estimates in triplicate for each power project of (1) the total average effective head to be utilized, and the per cent thereof to be obtained from dam and water conduit, respectively; (2) the stream flow, and the per cent thereof made available from storage by the project works and by other works respectively; (3) the area to be flooded by the dam below the flow line fixed by the estimated average effective head; (4) the length of the proposed water conduit (from intake to tail-race outlet); (5) the area and available capacity of each proposed storage reservoir; (6) the available storage capacity of the forebays (or diversion pond).

Rule 8. These estimates should be accompanied by complete statements in detail of all data on which they are based, including stream measurements, rainfall, stream flow, and evaporation records, drainage areas, total static head and losses in head, probable maximum, minimum and average power output, and whether or not auxiliary power development will be used, and all other pertinent information.

Rule 9. The application shall be accompanied by an affidavit of the applicant's engineer and a certificate of the applicant as to the correctness of the estimates and the statements made in said application and accompanying data. And in case any engineer shall make a false affidavit under these regulations, the Commission may order that no map, field notes, plan, or estimate made by such person shall be received or filed while the order is in force.

Rule 10. The point of diversion, named in the application, is one of vital importance and should be located with exactness, as upon the location thereof depends the question of interference with prior rights and a possible conflict with subsequent appropriations. The point of diversion may, however, be changed upon proper application to the State Water Commission and in its discretion.

Rule 11. Each separate, original map, plan, set of field notes, estimates and data, articles of incorporation, etc., shall be plainly marked "Exhibit A," "Exhibit B," etc., respectively. Maps and plans shall, in addition, be inscribed "Exhibit A, map of location of," etc., "Exhibit B, plan of," etc. Duplicate and triplicate copies, etc., shall be marked "Exhibit A, duplicate," "Exhibit A, triplicate," etc. Maps should be rolled for mailing and not folded.

Rule 12. Where sufficient space can not be found, under any question in the blank form of application furnished by the Water Com-

mission, an additional sheet of legal cap paper shall accompany such application and the question fully answered upon such sheet, the number of the question being referred to as follows:

Q. 1. (Cont.) (here fill in the additional data).

Q. 3. (Cont.) (here fill in the additional data), etc.

By so doing it obviates the danger of losing "riders" that may be attached to the front of such application, destroy the effect thereof and render the same incomplete.

Rule 13. All applications shall be accompanied by a detailed statement, in triplicate, by the applicant, as to the time desired and method to be used for making financial arrangements for commencing and completing the project. In the event applicant should desire that the method of financing the project should not be made public at the time of filing the application, or before the arrangement is consummated, he may, upon special reference to the Commission, communicate the information privately to the Commission and it shall be within the discretion of this Commission as to whether or not such information shall be made public.

Rule 14. No applications of any sort or nature made to this Commission for the use of water for the generation of electricity, or of electrical or other power shall be complete, and no permit or license issued thereon until every map or paper required by these rules, for the particular permit or license asked for, shall have been filed in the form prescribed.

Rule 15. An application is not a permit to appropriate water until after its approval and the granting of a license by the Commission; the approval of an application only becomes a permit to *construct works to apply the water to a beneficial use*. A full appropriation of the water asked for and granted in an application is not established until construction has been properly completed and the water applied beneficially to the use for which the right was granted within the time given to do so in the permit or license.

Rule 16. No legal rights can be obtained by diverting water, for the generation of electrical or other power since April 8, 1911, without a permit and license from the State Water Commission.

PROCEDURE UPON APPLICATION.

Rule 17. After filing the application, together with the necessary data in connection therewith, and the proper filing fee, applicant shall publish notice of the date of hearing upon such application, in a form to be prescribed by said Commission, in some newspaper of general circulation in the stream system, once a week for two consecutive weeks. No proof of publication in any paper other than that specified by the Commission will be accepted. Proof of such publication shall be filed at the hearing.

Rule 18. When it shall appear to the satisfaction of the Commission that an application in proper form has been filed, a public hearing shall be had thereon. Applicant shall be given at least thirty days' notice of such hearing which may be waived, however, upon the written request to that effect. The Commission or any Commissioner or any party, may, in any hearing on any application made to the Commission, cause the deposition of witnesses within or without the State to be taken

in the manner prescribed by law for like depositions in civil actions in the superior courts of this State.

Rule 19. Before granting any permit to construct works, or license for the diversion of water, as provided herein, the Commission shall be furnished by applicant with satisfactory evidence that a copy of the application has been recorded as required by sections 7 and 9 of the act creating this Commission, in the county in which the proposed works are to be erected.

Rule 20. Whenever an application for a permit to appropriate the use of water for the generation of electricity or electrical or other power has been rejected after further hearing had upon the merits of the same, another application having the same subject matter therein by the same applicant, or any person in collusion with such applicant, will not be received and filed in the office of this Commission until the expiration of six months from the date of such rejection.

PROTESTS.

Rule 21. Any person, firm, association or corporation deeming that the granting of a permit upon any application filed hereunder would be detrimental to rights that said person, firm, association or corporation may have upon the water claimed by applicant, may file their objections against the granting of said permit, on or before the date set in the notice for taking the application up for consideration.

Rule 22. A copy of said protest shall be served upon the applicant; it shall set out all the reasons why said application should not be approved; affidavits substantiating the reasons why said application should not be approved, as set forth in the objection, or protest, shall also be filed. Applicant shall file an answer to any protest within the time allowed by this Commission. Any answer, brief or form of reply filed herein shall be brought to the attention of the other party to the case by furnishing them with a copy of same. Such copies shall be made and furnished by the person making the charge (or a response to a charge) against an application, as the case may be.

Rule 23. Upon the request of any party to a protest, or application, or of its own motion, the Commission may issue a subpoena for the production of any persons, papers, records and books in all matters of business transacted before said Commission.

Rule 24. The fees and mileage of any witnesses called on behalf of a party to a protest against the granting of a permit by this Commission, for the use of water for the generation of electricity, etc., shall be paid by the party on whose behalf such person was called.

Rule 25. Subpoenas may be served upon the person, or persons, therein named, by any person over the age of twenty-one years. Due proof of such service shall consist of the acknowledgment in writing, of such service, by the party named in such subpoena, or by the certificate to that effect of the person serving same.

WITNESS FEES AND COSTS OF HEARINGS.

Rule 26. The fees and mileage allowed witnesses called to testify before the Commission, as herein provided, by subpoena, shall be the same as those allowed in the superior courts of the State in civil cases, as provided in section 4300*g* of the Political Code of this State.

Rule 27. The costs of taking testimony in any contested or protested applications shall be borne by the parties to the controversy as

follows: Each party shall pay for the direct examination of his own witness and the cross-examination of opponent's witness and also for the proportionate part of the charges made by the referee or referees. Arrangements for charges hereunder may be made with such referee or reporter by the parties to the controversy and all claims or charges against any party to a contest, or protest, shall be settled before the testimony submitted by such party will be considered. Charges for reporting uncontested cases shall be borne by this Commission.

Rule 28. In the event either party to a protest against the granting of a permit for the use of water, under this act, shall pursue a line of interrogation of a witness that is clearly irrelevant, the Commission will summarily put a stop to such interrogation. In cases where the taking of testimony is before a referee, such referee will warn the person pursuing a line of irrelevant interrogation that he will continue same at his own expense and the same shall be charged against and paid by such person. One copy of the transcript of testimony taken at the contest shall be furnished to this Commission and the cost thereof borne equally by the parties to the controversy.

BRIEFS.

Rule 29. At the close of a hearing on any protest against an application thirty days will be allowed the parties in which to file briefs, which time will be extended upon proper showing being made, at the discretion of the Commission. Applicant shall file his opening brief within ten days from the close of taking testimony; protestant shall file his reply brief within fifteen days of the filing of applicant's opening brief; applicant shall then have five days within which to file his closing brief; the Commission will then consider the case upon the testimony and briefs and all facts presented to it, including any reports by the field agents, and, after coming to a decision in the case, notify applicant and protestant of such decision.

Rule 30. Copies of briefs filed herein shall be served upon the respective parties to the controversy and a duly certified copy, with proof of service on opposing party, shall be filed with this Commission.

ATTORNEYS OR AGENTS.

Rule 31. When an applicant or protestant is represented by an agent or attorney, such agent or attorney shall immediately enter his appearance before the Commission and thereupon will be recognized as fully controlling the case on behalf of his client.

Rule 32. When an applicant or protestant is represented by more than one agent, or attorney, service of notice, or other papers, upon one of such agents or attorneys shall be sufficient.

INSPECTION OF RECORDS.

Rule 33. All documents once received by this Commission must be kept on file with the applications, and the date of filing must be noted thereon; and no papers will be allowed under any circumstances to be removed from the files or taken from the custody of said Commission, but access to the same, under proper rules, so as not to interfere with necessary public business, will be permitted to the parties in interest, or their attorneys, under the supervision of the Commission.

EXTRACTS FROM SECTIONS OF CHAPTER 41.

Section 7. All applications shall be accompanied by such maps and drawings in duplicate and such other data in duplicate as may be prescribed by the Water Commission, and such accompanying data shall be considered as a part of the application. A true copy of such application, without such accompanying data and maps and drawings, shall be recorded by the applicant in the office of the recorder of the county, or city and county, in which the proposed works are to be erected, within ten days after said application is filed with said Commission.

Section 9. If said application be approved the applicant shall immediately record such approved application together with the endorsement thereon, in the office of the recorder of the county, or city and county, in which the proposed works are to be constructed and shall be authorized on receipt of such approval and on recording the same to proceed with the construction of the necessary works, and to take all steps required to apply the water or the use of water to the purpose of generating electricity or electrical or other power, as provided in the approved application, and to perfect the proposed appropriation.

Section 21. The Water Commission is hereby authorized and empowered to do and perform the acts and things required of it by this act and to adopt rules and regulations necessary to carry out the provisions of this act, and it shall be the duty of the Commission to provide for the public hearing upon the merits of all applications filed with the Commission and to prescribe the rules of procedure to be observed at such hearings.

Section 22. Every member of said Water Commission is hereby authorized to administer oaths and to cause the production of persons, papers, records and books in all matters of business transacted before said Commission.

(To be filed in triplicate.) 1, 2 and 3 of Rules. See Rules and Regulations enclosed herewith.

STATE WATER COMMISSION OF THE STATE OF CALIFORNIA.

Name of applicant -----
Post-office address -----
Amount of water to be appropriated -----
Name of stream ----- County -----
Approximate point of diversion in smallest legal subdivision -----
----- Proposed use -----
Probable length of time necessary to complete data for formal applica-
tion for use of water -----
Approximate estimate of magnitude of project, amount to be expended
thereon, nature of works proposed, etc., in such detail as is possible
at this time -----
That there is no person engaged in making surveys or preparing to
make application for this water right save myself -----

I, _____, being the above named applicant, do hereby certify that I am making the above application for a preliminary permit in good faith and for the purpose of actually developing the use of the water to be applied for. That I will make a report to the Commission, upon the progress of the work of gathering data and making surveys, every _____ days. That if at any time I cease active work on the making of surveys and the gathering of other data for the formal application for the use of the water, or if I should attempt to speculate in the permit which may be issued hereunder, I will freely and willingly relinquish all claim to the same and will consent to the cancellation of the permit by this Commission.

(Name of applicant.)

1. _____
2. _____

PRELIMINARY PERMIT No. _____

STATE OF CALIFORNIA,)
County of _____) ss.

This is to certify that we have examined the foregoing application and do hereby grant a preliminary permit thereon subject to the following limitations and conditions:

Permittee shall at once begin the gathering of the data and making of necessary surveys required by the Commission for the filing of a formal application for the use of the waters of the State of California.

Such work shall be completed and said application, in proper form, filed with the Commission on or before the _____ day of _____, 191_____.

In the event work ceases under this permit before the time limited herein, or in the event that permittee is speculating or attempting to speculate in this permit, all rights granted hereunder shall at once cease and determine and the Commission shall give written notice of the cancellation of such permit to said applicant.

Witness our hands this _____ day of _____, 191_____.

State Water Commission.

INTRODUCTION.

Shall California protect her people, her forests, her watersheds, her ranges, her wild life, and her domestic stock against further unnecessary destruction by forest fires? This question is before the people of California for a definite decision. There are influential owners of extensive timber properties who would have the public believe that the question is not "shall California protect her forests" but rather, "how shall California protect her forests"; and their attitude toward forestry legislation in 1913 is conclusive proof.

That forest fires in the United States destroy annually millions of dollars worth of property has been proved. That thousands of persons have lost their lives in forest fires has been proved. That forest fires can be brought under control for an expenditure far less than the amount of damage they cause, if left to burn uncontrolled, has been proved by the Federal Government through the protective system maintained by it in more than 20 states embracing more than 140,000,000 acres; and also by 33 states through their protective systems. That destructive forest fires occur annually in California is undisputable; and they destroy annually thousands of dollars worth of property, impair the usefulness of watersheds, retard the natural reproduction of commercial forests, and threaten the lives of our people, many of whom have already perished in forest fires because a state protective system has been denied by those in control of most of the privately owned timbered lands in California. These timbered lands are being exploited without regard to present or future public welfare and most of them harbor intolerable nuisances and every attempt to secure a reasonable supervision by the state over such properties has been unwelcomed.

Convincing data relative to forest fires is contained in the "Annual Fire Report, 1913," issued by the State Board of Forestry and its repetition seems unnecessary.

The following report is chiefly directed toward the principle of initiating a state forest protective system and presents arguments, endorsements, and legislative measures operative in other states which we believe sufficient to overcome unfounded opposition to the fundamental principles of forest protection.

A state's wealth which required no man's investment.

FACTS.

The total acreage of California is 101,310,080 acres, of which 99,898,880 acres are land surface and 1,411,200 acres are water surface.

The total acreage of forest land in the state is approximately 20,604,000 acres.

There are eighteen national forest reserves in California representing a total area of 20,555,680 acres.

There are approximately 8,500,000 acres of forest land within the state privately owned.

There are approximately 12,786,306 acres of merchantable forests in the state.

California has no state forests.

The state could acquire forest areas by purchase or by obtaining title to lands upon which the taxes are delinquent.

The present forest law of California is weak and unsatisfactory in that the State Board of Forestry may not make rules and regulations; that no provision is made for an adequate system of forest protection, the maintenance of experimental stations, state nurseries and the acquirement and management of state forests.

The forests outside the national reserves are not well protected because the state depends upon a system of voluntary firewardens who serve without pay. This can not be an efficient system since it is unjust to assume that a man should neglect his business to fight fire, without compensation, in territory remote from his own property.

It is apparent that a paid system of protection is necessary. And this can be brought about only by generous and far-sighted legislation.

The term "slash" is applied to tops, limbs, bark and broken logs left in the woods after cutting operations. Slash constitutes a menace since it invites fire and burns with such intense heat that reproduction in its path is killed; fires frequently spread from such material into standing timber where untold damage may be done. Where market conditions permit much of the slash can be cut into cordwood and the remaining small branches piled and burned under proper supervision. Otherwise, the slash should all be piled immediately after logging and burned after the first rains in late fall or early winter.

Forest and range fires frequently result in the loss of human life, public and private improvements, timber, game, homes, valuable watershed vegetation, orchards, live stock, forage, and vegetation upon which the bee industry depends.

The fire danger season in California is from May 15th to October 15th.

Forest fires, in the United States, according to the most conservative estimates since any records were available, have caused an average annual loss of seventy human lives and the destruction of merchantable timber to the amount of \$25,000,000.

California does not receive a single dollar from the Federal Government under the Weeks law provision. The reason for this is that the provision demands that every state, to receive money under this law, must first appropriate a forest protection fund from her own treasury.

A few of the lumbermen practice cautious and economic methods of logging; but these men are greatly in the minority.

It was published that less than three ten-thousandths of one per cent (.0003%) of the 4,603,713 acres of merchantable forests of California suffered by fire during the dry season of 1913. These figures are very misleading and incorrect. Taking the total area of merchantable forest in California as 12,786,306 acres, the report of the Federal Forest Service alone shows that 13,861 acres of timberland were burned over; this is slightly more than one tenth of one per cent (.108%) of the total. Adding to the Forest Service figures those of fires outside the national forests and reported by firewardens to the State Forester, the total area of timberland burned over in California during 1913 is 61,812 acres, or approximately one half of one per cent (.48%) of the total area of merchantable forests.

Applying conservative figures, the total money damage to timber alone during 1913 was \$124,059. The value of cordwood destroyed is included in this amount.

The total forest fire damage in California in 1913 amounted to \$511,077.

The total forest fire damage in California in 1914 amounted to \$109,025.75. This figure is necessarily incomplete, since all reports are not received in time to be included.

FOREST LEGISLATION IN CALIFORNIA.

History.

The first legislative recognition of forestry in California was the passage of an act in March, 1885 (page 180, Appendix), establishing a State Board of Forestry. At first the board acted in the capacity of a commission of inquiry with emphasized educational functions. By an amendment police powers were conferred in 1887 (page 180, Appendix), for the purpose of making arrests for any violation of any law applying to forest and brush land within the state or prohibiting the destruction thereof, with an appropriation of \$30,000 for the following two years. Two experimental stations were maintained, and the board published three reports on the forest conditions and the forest trees of the state. Neither bill provides for the maintenance of a forest fire protective system, and nothing was accomplished in that direction. The act was repealed in 1893. Possession and supervision of the forest experimental stations were transferred to the State University and the Board of Forestry was abolished.

No other forestry measure came before the legislature until 1903 (page 181, Appendix), when an interest in the subject was again revived. A bill was passed providing for state cooperation "with the chief of the bureau of forestry of the department of agriculture for the purpose of studying the forest resources of the state and their proper conservation, and especially with a view of formulating a proper state forestry policy, to the extent of fifteen thousand dollars."

This cooperative provision was renewed in 1905 (page 181, Appendix), making an additional appropriation of ten thousand dollars.

The state entered into agreements with the Federal Forest Service, and its agents commenced active field investigations in 1903 and continued through the year of 1904 and a portion of 1905. Field parties covered every portion of the state, and so much of the data as was believed necessary for the drafting of forest legislation "with a view of formulating a proper state forestry policy," was completed in time for presentation to the 1905 legislature. The views of the Federal Forest Service, as to what constituted "a proper state forestry policy," were expressed by the forestry measure (page 181, Appendix) presented to the 1905 session of the legislature. This measure was drafted, approved, and its passage urged by the forest service, then under the direction of Gifford Pinchot.

This measure recognized the necessity for the establishment of a state forest fire patrol system under the direction of a trained forester. It provided for five district firewardens at Salinas, at one thousand dollars each per annum and necessary traveling expenses, not to exceed seventy-five dollars per month. The State Forester was authorized to appoint the firewardens and through them take prompt action to prevent and extinguish forest fires. Certain restrictions were imposed in the use of fire during the dry season, and the forester was authorized to have the counties and railroad companies clear their rights of way of inflammable material. With these and other necessary measures the bill was a strong one against which no logical objection could present itself. The bill was passed and the board of forestry again created; but, not before destructive amendments had eliminated its vital provisions. The bill as passed

(page 185, Appendix) gave the State Forester no greater working force than the voluntary firewardens. No compensation could be made to firewardens and assistants for fighting fires, regardless of the seriousness of the situation, and, with several important measures denied, the board was forced to face a serious and difficult problem with practically no provision for meeting the inevitable requirements for success.

As a result of the unwise elimination of the essential provisions of the forestry bill, our forests and ranges have continued to be devastated.

The attitude of many who controlled the legislature may be interpreted as favorable to forestry and protection just so long as nothing would be affected by its principles. In other words, have a State Board of Forestry to satisfy the public sentiment demanding such a body but see to it that the board is kept powerless to accomplish what public sentiment, when more closely analyzed, desires, namely, effective work. The aim has been to prevent the forestry board from gaining such ground as would enable it to suggest that timber owners adopt precautions similar to those employed on state and federal land and not unlike those compelled in cities.

A bill was introduced at the 1911 session of the legislature (S. B. No. 729) which provided for "a system of firewardens within the state whose duty it shall be to protect the forests of the state by preventing and suppressing forest fires." This measure provoked merely a subtle interest and its passage was denied.

The forestry movement was furthered, however, by the passage of a bill providing for a conservation commission (page 189, Appendix) with ample authority and appropriation to make a thorough investigation of the natural resources of California. The commission was directed to render a report of its findings to the governor and the legislature in 1913.

Legislation, 1913.

Two forestry measures were introduced during the 1913 session of the legislature: Senate Bill No. 934 (page 190, Appendix) and Assembly Bill No. 643 (page 193, Appendix).

Senate Bill No. 934 offers four amendments to the forestry law under which the State Board of Forestry is operating today. The first amendment contains the principle, spirit, and strength of those portions of the original 1905 bill (prepared and approved by the United States Forest Service) that "special interests" had stricken out before its passage was permitted. This amendment provides (1) for dividing the state into patrol districts; (2) for maintaining a fire patrol system during the dry season; (3) for the employment of a firewarden in each district, and patrolmen when necessary; all to devote their entire time to preventing and suppressing forest fires, and fixes their compensation at not more than seventy-five dollars per month; (4) for the purchase of necessary equipment, instruments and field supplies; (5) for the construction of lookout stations and means of communication; (6) for the payment of persons compelled to fight fire at twenty-five cents per hour; (7) for entering into cooperative agreements with persons, firms, etc., for the purposes of fire protection; and (8) for cooperating with the federal government in the prevention and suppression of forest fires.

Amendment Opposed.

The California Forest Protective Association was most active in its opposition to Senate Bill No. 934, and rendered a report, shortly after the close of the 1913 legislature, designated as "Bulletin No. 1." This report states that "This association was formally organized in March, 1912, under the laws of California as a non-profit, cooperative corporation." And its purpose is: "The protection of the forests of the State of California and providing facilities for cooperation to that end by the forest owners, State of California and the Government of the United States." In concluding the report the association announces its intention of issuing other bulletins "at short intervals of time," and then states, as it seems to me, the real purpose of the association: "Forced into being by imminent inimical proposed legislation, it is appropriate that the first formal report of this association to its members should cover the period of time which has seen that danger fought and successfully disposed of through its efforts." Having defeated the forestry measure that provided definitely for the protection of California forests against forest fires, and in a manner and to the extent advocated by all who are fostering the principles of forestry throughout the United States, the report closes with the following sentence: "This association favors just laws that will tend to perpetuate the forests, and to insure their use to the best interests of the owners and the general public." And I assume that the following is in support of "just laws":

Of greater value to the members of this association than the enactment of the bill it recommended would have been, was the defeat in the legislature of Senate Bill No. 934 and Assembly Bill No. 1069, designed, we understand, and very actively supported by the State Forester. These bills were identical and gave the State Forester such powers as would have proven a constant annoyance, menace and expense to owners of timberlands.

Under the radical provisions of these bills, the State Forester, without any control by the State Board of Forestry or any other supervising agency, would have had complete authority over the expenditures of the moneys appropriated for forest protection and also, to a great extent, would have been able to interfere with the management and control of privately owner timberlands. He would have been given authority to divide the state into districts as he saw fit; to employ fire patrolmen according to his judgment; to fix their compensation; to employ such firewardens as he deemed necessary and fix their compensation; to pay their traveling expenses; to remove them at his pleasure; to purchase equipment, instruments, and supplies; to establish lookout stations, telephone, and other systems of communication; to equip supply depots, etc. In addition to the above powers, he could have cleaned up a forest area or extinguished a fire and put a lien on the land for the expense.

Opposition Merely Asserted, Not Substantiated.

The oppositions asserted in the foregoing paragraph may properly be construed as being their argument against the establishment of a state forest protective policy; because each of the "radical provisions" objected to are the very provisions which all advocates of forestry agree upon as being the fundamental principles to be incorporated in any progressive state forestry legislation. This unanimous opinion is best expressed by the report of the forestry committee presented to the Fifth National Conservation Congress on "Established Principles of Framing.

Passing and Enforcing a State Forest Law," which states, in part, that—

The established principles in framing a law naturally fall under three headings: The principles on which a forest law should be based, the principles determining the form of organization, and the principles determining the effectiveness of the law and organization.

The state is interested in all forests, public or private, and should have a voice in the matter of handling even private forest lands, because the forest is a limited natural resource which must be cared for and maintained continuously for the public welfare, and because the individual has but a passing interest in it.

The first thought of a forester is for the protection of existing forests, and under the heading of protection we can properly group the measures which may be taken to insure against direct loss the mature forests and such timber resources as are being provided through natural conditions.

Protection from fire is of chief importance, and second comes protection from attacks of insects and fungi. There are other phases of forestry work, protective in a certain sense, but logically, and for the sake of convenience, they can be grouped under the head of maintenance of timber supply. The first basic principles of a forest law is forest protection.

The second principle is to establish a timber supply on a permanent basis. To accomplish this purpose, work must naturally begin with a classification of the land, determining as closely as possible what lands are agricultural in character and what lands are non-agricultural and should therefore be devoted to the growing of timber. This classification should be carried out by the state irrespective of the ownership of the land classified. Theoretically, this work should precede attempts at reforestation, afforestation, application of silvicultural methods of cutting, attempts to equalize the tax on timber and timberlands, or state ownership of lands used for forestry purposes. However, in practice it has been found expedient to develop forestry work along such of these lines as the public understands and is ready to accept. Nevertheless, non-agricultural lands must be determined, and the classification agreed to by the people, before one can consider forestry as established on a permanent footing in the state.

Reforestation should be carried on by the state not only on its own lands devoted to forestry purposes, but also in cooperation with private owners. The part which the state should play in its cooperation should be commensurate with the interest which the state has in maintaining the timber supply. The same may also be said of afforestation, but in the majority of cases this work will be state cooperation in woodlot and windbreak planting.

The application of silvicultural methods to logging operations is one of the chief factors in establishing and maintaining the greatest timber supply. The proper method of brush disposal approaches in a degree to a silvicultural method, although such disposal may be considered chiefly as a fire protective measure. This has been practically accepted as a regular part of logging throughout the northern half of the United States; and it is but a small step in advance on the part of the state to require the leaving of a certain number of sturdy, thrifty seed trees on every acre of non-agricultural land logged, or, where this method is not practicable, the state might require the timber to be removed in a series of two or three cuttings, so as to insure the renewal of a forest on lands which can be used only for tree growth. Or, for some states the best cutting method might be to require the logger to replace the trees cut, by planting an equal or larger number of desirable species. The state's interest in the forest is paramount to the interests of all others, and if it is to properly guard the public welfare some such means of perpetuating the timber supply must be used.

Under the system of taxation of timber and timberlands which is in practice in most of the states at the present time, the application of silvicultural methods to logging would undoubtedly work somewhat of a hardship on the lumbermen. The tax is not equitable, and no forest law is complete unless it makes some provision for correcting the plan of taxation which is used in most of the states. On account of the long time involved in growing a timber crop on forest land, the tax is really on

the annual increment of the forest, but the amount of the tax is based on the entire stand. The law should provide for taxing the timber crop on the basis of its value when cut, and there should be a tax also, as a matter of expediency, on the forest land itself.

The purchase of non-agricultural land by the state naturally follows as a means of utilizing such forest lands as probably will not be handled by private corporations, by protecting the headwaters of navigable streams, by providing public recreation grounds, and by putting into practice the forestry methods which it advocates.

The form of administrative departments of the several states is based on principles derived from the English or French systems of government, or from our own federal system. For use in state administration these principles are modified in various ways, often to such an extent that their original purpose may be lost. In framing a law, the form of organization should provide for accurate, skillful, economical, and efficient consummation of the principles which are the purposes of the law.

To carry out the basic principles for which forestry stands, the organization must be free from direct responsibility to political parties. More than any other administrative department of the state, the forestry work should be free from interruption and disorganization arising from the change in political and personal administration of the state. While it is, perhaps, necessary that the administration of forestry matters should be responsive to the will of the people, it is very essential that they should not be subject to the whims and ill-advised action which is sometimes taken by a state legislature. No continuous and progressive forest policy can be carried out in a state where such interference may arise, and it would be far better if the organization of the forestry department were almost entirely removed from responsibility to the will of the people, as is the case with our judiciary at the present time.

To further safeguard the continuity of the forest policy, civil service regulations should govern in the employment of practically all grades of officers in the forestry department. The advantages of having civil service requirements are obvious.

The law should give the executive head or forester ample discretionary power. It is important that this power should be in the hands of the forester, because of the practical impossibility of framing into law the detailed forms and methods of administrative procedure. The state legislatures invariably attempt to eliminate discretionary power in the administrative offices by piling up legislative provisions and enactments covering all phases of all lines of work. We all know of cases where this tendency has resulted in seriously handicapping effective administrative work. In the framing of a new law and the organization of a new department, it is very essential that details should be left to the executive, and after he has had time and opportunity to prepare and work out the methods of procedure, they can, if necessary, be readily incorporated as part of the law.

For the same reason that legislatures do not commonly delegate discretionary power to the administrative officers of the state, the tendency is to limit the executive when it comes to delegating such power to subordinate officers. His authority to do this should not be limited, for obvious reasons.

An efficient field organization should be made possible by the law. This may be insured in part by the personnel of the forestry board, by the enactment of civil service requirements, and by the qualifications required in the state forester, upon whose judgment the selection of the right kind of men will rest.

In all administrative work there are controversies arising over the interpretation of certain provisions of the law, or the enforcement of regulations prescribed by the forester in pursuance with his authority under the law to prescribe such regulations. This is distinctly a judicial function, but nevertheless the function in such cases is subordinate to administration, and therefore comes in as one phase of administrative work. The law should provide that decisions by the forester or forestry board on matters which do not obviously come within the jurisdiction of the court should be final. This form of procedure is quite largely followed even now, although no direct

reference to it may be found in the statutes. The administrative officer will consult the office of the attorney general of the state when in doubt, and be guided by his advice.

Having outlined in the law the principles on which forestry work is based, and the form of organization to carry out these principles, its effectiveness will depend, in the first place, upon the funds which are appropriated for the work. Its effectiveness will also depend in a large degree on the efficiency of the force, the proper equipment of the force, and such permanent improvements as telephone lines, trails and canoe routes as it may be possible to provide. There must also be provision for the prompt punishment of violators of the law. Great care should be taken in wording such provisions, in order that action may be quickly taken and penalties duly administered. The field officers of the department should have police power, in order not only that violators of the law may be brought to justice, but also that they may with due authority take steps to prevent the loss or destruction of property in their care or within their jurisdiction.

The remaining three assertions published by the opposition may as well be disposed of now; namely (1) "the State Forester, without any control by the State Board of Forestry or any other supervising agency would have had complete authority over the expenditures of the moneys appropriated for forest protection * * * ;" (2) "the State Forester would have authority to fix the compensation of patrolmen," and (3) " * * * he (State Forester) could have cleaned up a forest area or extinguished a fire and put a lien on the land for the expense."

The State Forester is at all times accountable to the Governor and the State Board of Forestry. Article 18 of chapter 3 of title 1 of part 3 of the Political Code, chapter 349, statutes of 1913 (relating to the State Board of Control) provides: Section 658. * * * "The board may also establish rules and regulations not inconsistent with law for its government. * * * ." One of the regulations of the Board of Control provides that each department shall submit a detailed estimate, by the twentieth of each month, of its proposed expenses for the ensuing month. No expenses may be incurred until such estimates are approved, thereby assuring a wise expenditure of state moneys. Appropriations made for the board of forestry are further scrutinized by a "supervising agency" provided by another section of the same article: Section 663. "Every claim against the state for which an appropriation has been made or for which a state fund is available, must be presented to the board for its scrutiny before being paid. The board may for cause postpone action upon a claim for not exceeding one month." Section 682 of the same article provides further that "The board shall have general powers of supervision over all matters concerning the financial and business policies of the state, and shall, whenever they deem it necessary or at the instance of the Governor, institute or cause the institution of such investigations and proceedings as they may deem proper to conserve the rights and interests of the state."

One naturally assumes from the second assertion that the State Forester is authorized by the provision of Senate Bill No. 934 to fix the amount of compensation for district firewardens and patrolmen for any amount he may choose. The bill provided, however, that "He may appoint a district firewarden for each of said districts so established, and he may also employ within such districts such number of fire patrolmen as, in his judgment, may be required to carry out the provisions of this act, assigning to each of the latter the territory over and within which

they shall have jurisdiction and fix the amount of the compensation for all district firewardens and fire patrolmen for services actually rendered, which shall not exceed the rate of seventy-five dollars per month; the district firewardens and the fire patrolmen may be paid necessary traveling and field expenses." These provisions seem modest, and are in accord with those contained in the forest laws of other states.

The last objection should provoke mirth rather than apprehension. Section 19 (see Appendix) of the present forest law provides that lands covered wholly or in part by inflammable debris which by reason of its location or lack of protection, endangers life or property, constitutes a public nuisance and requires the owner to abate it. Upon his refusal to do so, the law directs that the State Board of Forestry shall do so, and the cost shall become a lien on the property. This section has not been in operation because no appropriation has been made to the board of forestry to enforce it.

ENDORSEMENTS.

With claims and recommendations being made by those who are advocating a strong state forest policy for California, it seems quite appropriate here to quote a few opinions that have been expressed by organizations and individuals entirely neutral to any particular phase of forestry work in California alone. That these expressions bear out the substance of all that we are endeavoring to secure for California is not difficult to see. It is plain that these expressions constitute a complete recognition of the vital need of actual state activity when it comes to forest protection. And it is further evident that any opposition directed toward the substance of the proposed measures for California, as herein endorsed, is directed toward all the following agencies. And the following agencies themselves will consistently admit that this is true.

From the declaration signed by those present at the Convention of Governors held at the White House, in Washington, D. C., in May of 1908:

We urge the continuation and extension of forest policies adapted to secure the husbanding and renewal of our diminishing timber supply, the prevention of soil erosion, the protection of head waters, and the maintenance of the purity and navigability of our streams. We recognize that the private ownership of forest lands entails responsibilities in the interests of the people, and we favor the enactment of laws looking to the protection and replacement of privately owned forests.

Governor Frank R. Gooding of Idaho speaking before the Convention of Governors in 1908:

Idaho has already passed a law for the protection of her forests on state lands. The law provides that, wherever the land is more valuable for forest than for home building, the timber shall be cut under state supervision, looking to the protection of the young trees, and throwing such other safeguards around it as will insure its success as a state forest.

THE DECLARATION OF PRINCIPLES AND POLICY OF THE AMERICAN FORESTRY ASSOCIATION.

It is a voluntary organization for the inculcation and spread of a forest policy on a scale adequate for our economic needs, and any person is eligible for membership.

It is independent, has no official connection with any federal or state department or policy, and is devoted to a public service conducive to national prosperity.

It asserts that forestry means the propagation and care of forests for the production of timber as a crop; protection of watersheds; utilization of non-agricultural soil; use of forests for public recreation.

It declares that forestry is of immense importance to the people; that the census of 1913 shows our forests annually supply over one and a quarter billion dollars' worth of products; employ 735,000 people; pay \$367,000,000 in wages; cover 550,000,000 acres unsuited for agriculture; regulate the distribution of water; prevent erosion of lands; and are essential to the beauty of the country and health of the nation.

It recognizes that forestry is an industry limited by economic conditions; that private owners should be aided and encouraged by investigations, demonstrations, and educational work, since they can not be expected to practice forestry at a financial loss; that federal and state governments should undertake scientific forestry upon national and state forest reserves for the benefit of the public.

It will devote its influence and educational facilities to the development of public thought and knowledge along these practical lines.

It Will Support These Policies.

Federal administration and management of national forests; adequate appropriations for their care and management; federal cooperation with the states, especially in forest fire protection.

State activity by acquirement of forest lands; organization for fire protection; encouragement of forest planting by communal and private owners; non-political departmentally independent forest organization, with liberal appropriations for these purposes.

Forest fire protection by federal, state and fire protective agencies, and its encouragement and extension, individually and by cooperation; without adequate fire protection all other measures for forest crop production will fail.

Forest planting by federal and state governments and long-lived corporations and acquirement of waste lands for this purpose; and also planting by private owners, where profitable, and encouragement of natural regeneration.

Forest taxation reforms removing unjust burdens from owners of growing timber.

Closer utilization in logging and manufacturing without loss to owner; aid to lumbermen in achieving this.

Cutting of mature timber where and as the domestic market demands it, except on areas maintained for park or scenic purposes, and compensation of forest owners for loss suffered through protection of watersheds, or on behalf of any public interest.

Equal protection to the lumber industry and to public interests in legislation affecting private timberland operations, recognizing that lumbering is as legitimate and necessary as the forests themselves.

Classification by experts of lands best suited for farming and those best suited for forestry; and liberal national and state appropriations for this work.

From the Report of the Fifth National Conservation Congress.

Forest protection through voluntary warden service has in every instance proven a failure. The multiplication of duties of state officials, such as the provision that game wardens or fish wardens also act as firewardens, has likewise been far from successful, though often tried out.

To secure the best results members of state boards of forestry as well as state foresters and wardens must be free from political interference.

The so-called "light burning" theory advocated by certain timber owners in California and adjoining states is especially to be condemned. It is not only impractical from a financial standpoint, but causes destruction of young timber and makes for carelessness with fire on the part of the public.

Every timber state has an unquestioned duty to protect the forests. In none of them are appropriations for this purpose adequate.

To be effective, forest protection work and forest legislation must not be confined to present-day needs, but must, in some degree at least, look to the future benefits which will result from the efforts of the present generation.

Where forest laws are adequate and the state maintains machinery for their enforcement, protection is far better than where it is left entirely to land owners.
* * * No small part of good fire protection depends upon rigid enforcement of the law, and though often tried, it has been as often proven that little headway is made where volunteer forces are responsible for carrying out the provisions of the law.

Certainly no one but the state, on lands outside federal jurisdiction, can properly enforce the law, and enforcement can be brought about only by paid deputies. Such matters as slash burning, enforcement of laws governing clearing of rights of way along railroads and wagon roads, regulation of railroads as regards setting of fires, enforcing spark-arrester laws and burning permit laws, have in the aggregate an enormous influence on proper fire protection. They can be carried out only with

state support. A state's interest in forest protection is so vital that it can well afford to incur considerable expense in maintaining adequate forces to prevent fire, and when this is done private owners usually do their share.

Railroads continue to be the greatest single cause of forest fires. * * * It is seldom amiss * * * for states to provide, by law that proper precautions be taken by common carriers to prevent starting of fires.

Protection through patrol is generally recognized as the only means for insuring against serious loss of timber by fire.

California * * * is the only one of the Pacific coast states where little is being done by private owners to protect their property. California, being one of our most important timber states, should properly have adequate forest laws, but such is not the case. Nor have the private timber owners in that state, with few exceptions, taken the necessary steps to safeguard their own property.

Mr. Harry Harper, secretary of Santa Cruz County Cooperative Forest and Home Protective Association, in his report says:

* * * It would seem that the expensive lessons taught by our overproportionate fire loss in past years should result in the universal support of any movement designed to minimize this loss. Especially might it be reasonably expected that we should receive support from the larger timber owners and from the corporations controlling large areas of forest land; but these, without exception, appear to favor a continuance of the independent and purely local protective methods upon which they have, with unfortunate result, relied in the past, and have evinced no desire whatever to cooperate with us in our efforts to inaugurate general and county-wide fire preventive measures.

MORE ENDORSEMENTS OF THE PRINCIPLE OF FOREST PROTECTION.

STATE OF ALABAMA.

DEPARTMENT OF GAME AND FISH.

MONTGOMERY, October 19, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

MY DEAR MR. HOMANS: Responding to your favor, you are advised that I consider the fundamental principles upon which any forestry law is based which has for its object the real conservation of the forests, as follows:

- 1st. The absolute protection of the forests from ravages caused by fire.
- 2d. Maintaining a thorough patrol system for the purpose of extinguishing forest fires; likewise giving authority of members of the forest patrol to citizens to assist in extinguishing forest fires.
- 3d. Requiring railroads to keep their rights of way clear of grass or other inflammable material.
- 4th. Requiring railroad locomotives to use spark arresters.
- 5th. Exempting from taxation for a period of ten or twenty years cut-over lands that the owners will consent to grow during that period forest trees.

For your further information I am sending you, under separate cover, a bulletin issued by this department on the importance of forest conservation, which may be of some service to you.

Very truly yours,

JOHN H. WALLACE, JR.,
Commissioner.

UNIVERSITY OF CALIFORNIA.

FORESTRY

COLLEGE OF AGRICULTURE.

AGRICULTURAL EXPERIMENT STATION.

BERKELEY, November 23, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR MR. HOMANS: In accordance with your telephone request of November 21st, I am glad to make the following statement regarding what I believe to be the first essentials of a strong forest law.

I believe that the first things to be accomplished in the state are:

1. The protection of both publicly and privately owned timberlands against fire must be provided. Some one has remarked that "you might as well plant beets on Broadway as to try to practice forestry before reasonable fire protection is assured," and this is not putting it too strongly. This protection can not be accomplished without liberal funds, any more than adequate fire protection in cities can be given without such funds. It is but reasonable to expect the government to provide, or assist in providing, fire protection for the forest as well as for the city dwelling or factory.

2. A just system of taxation of forest lands must be in force.

3. There should be a strong state forestry organization as a regular and important part of the state government, to look after the interests of the people of the state in all matters relating to forestry.

Please do not hesitate to call on me whenever I can be of any possible help. With best wishes,

Sincerely yours,

WALTER MULFORD.

Professor of Forestry.

Conservation Commission of California. Report of 1912, page 52:

"The state should have a well organized fire patrol under the guidance of a practical firewarden, which is the most effective known manner of preventing and suppressing fires."

COLORADO SCHOOL OF FORESTRY.

COLORADO SPRINGS, COLORADO.

November 8, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR MR. HOMANS: I received your telegram yesterday upon returning to Colorado Springs from a field trip and regret that pressure of field work has prevented me from replying more promptly to your letter of October 22d.

I assure you that I heartily endorse the proposed forest legislation in California and hope that you may succeed in passing a strong forest law at the next legislature. In my opinion, the essentials of such a law are an adequate fire patrol system with regulations for the disposal of slash and the use of fire in clearing land, and for the regulation of the fire risk caused by railroads and engines; equitable taxation of forest land; provision for the acquisition and administration of state forests; and penalties for any fracture of the forest laws.

I shall appreciate it if you will send me a copy of the law or proposed law as soon as it is published in convenient form.

Very sincerely yours,

E. I. TERRY.

Director.

STATE BOARD OF FORESTRY.

INDIANAPOLIS, INDIANA, October 20, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Under separate cover we are sending you a copy of the 1913 report which contains the few forest laws we have in Indiana.

The essential parts in my opinion should be a law that will encourage the owners to take better care of their forests, and a law with a severe penalty against persons setting fires only under the directions of the State Forester, and compelling railroads to keep the right of way well cleared.

To this should be added the patrol system in all the parts of the state where extensive forests are found.

Yours truly,

E. A. GLADDEN,
 Secretary.

KANSAS STATE AGRICULTURAL COLLEGE.

DEPARTMENT OF FORESTRY, OFFICE OF STATE FORESTER.

MANHATTAN, KANSAS, October 19, 1914.

MR. G. M. HOMANS, *State Forester*,
State Board of Forestry, Sacramento, California.

DEAR SIR: In reply to your letter of October 15th: The essential points of a good state forest law should first of all provide for the protection of its present stand of timber against fire and vandalism, and should also embody liberal provisions for the disposal of all merchantable timber on terms that will insure the greatest good to the greatest number. Following this, provision should be made for the restocking of burned over and denuded lands capable of producing merchantable timber. I consider protecting the present stand against fire and theft the state's first duty. This, of course, means providing for adequate patrol and means of fighting fires when they occur.

Yours very truly,

CHAS. A. SCOTT,
 State Forester.

COMMONWEALTH OF KENTUCKY.

OFFICE OF STATE FORESTER.

FRANKFORT, KENTUCKY, October 19, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Your letter of October 15th has been received and I am very glad to give you some information which has been derived from my experience and which may be of help to you in connection with the framing up an adequate forest policy and forest law for the state. The forest law, which is enacted for Kentucky and a copy of which I am sending under separate cover, is a very good law in a great many respects. There are some features about it, however, which I think are distinctly detrimental to the initiating of an adequate forest policy in any state.

In the first place, in section 1 of this act, it provides that a state board of forestry shall consist of six members, three of which are ex officio and the balance of whom are appointed by the Governor. I am very decidedly of the opinion that a board of forestry, providing a board is desired, should be composed of all ex officio members and that the State Forester should be ex officio a member of the board. This is one of the most fatal defects in the Kentucky law in my opinion. Also, I do not think it is advisable, if politics are to be kept out of the work, that the governor should be a member of the board. Of course, this depends on who is governor. Where you

would find one governor who is interested in the work and anxious to see it on efficient basis, I expect you would find one half dozen who are of opposite tendency and who have no real interest in a forest policy. In regard to the matter of cooperation with the federal government, as provided in section 31, I think the amount to be expended in such cooperation should be left to the discretion of the state board of forestry and not made a matter of law. With regard to the portion of the law, dealing with the forest fires, I think the Kentucky law is excellently well drawn up, except that I do not think sufficient help or adequate pay is provided for in section 19. This should be decidedly amplified. I am very glad to give you this information and hope it will be of some assistance to you.

Very truly yours,

J. B. BARTON,
State Forester.

STATE OF MAINE.

OFFICE OF LAND AGENT AND FOREST COMMISSIONER.

AUGUSTA, November 6, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: I understand that important forest legislation will come before the California legislature the first of the year.

We have sent you copies of our forest laws.

A system of forest protection has been developed in the Maine forestry district, which embraces the wild lands of our state, that is effective and satisfactory to all parties interested. It has accomplished very good results.

The weak point in our protective system is the protection afforded to the wooded area of the state outside the forestry district, and we intend this year to extend the provisions of the district law to the remaining area of the state.

We also intend to make provisions for the removing of tops and limbs on the territory adjoining the right of way of railroads and carriage roads. We believe this to be a very important matter as owners of these properties at present allow this inflammable material to remain after lumbering, and it is a great menace. I think that we shall place the width to be covered by this act at one hundred feet.

Our railroad patrol act is particularly effective and there is no objection to it by the railroads. In fact, it has saved them much expense in equipping for oil burners. Had it not been for this act the legislature would undoubtedly have passed a provision necessitating the use of oil burners on locomotives running through the forest area.

I can not say too much in regard to the results obtained here in Maine from our effective laws. They are saving our forests from destruction from fire, and have worked out in a manner entirely satisfactory to the landowners, railroads, and the general public. In fact, I believe the results accomplished warrant the inauguration in Maine of insurance on forest property at a reasonable rate. The matter is under discussion here now and the general opinion exists that our effective protective system warrants the inauguration of insurance on forest property.

I sincerely hope that the State of California will adopt effective protective measures and feel confident that after they have been in operation some time the great benefit will be manifest to the people of the state.

Yours very truly,

BLAINE S. VILES,
Land Agent and Forest Commissioner.

MARYLAND STATE BOARD OF FORESTRY.

JOHNS HOPKINS UNIVERSITY, BALTIMORE, MD.

October 23, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR SIR: Referring to your letter of October 15th in regard to forest fire laws: Conditions in California are so totally different from those with which I am familiar in the East that I hesitate to pass an opinion, but since you have asked it, I believe the main essentials are:

First—That your forest fire organization should be absolutely free from politics.

Second—That the forest wardens, or others engaged in the work, should be selected for their special fitness for the work.

Third—That adequate appropriation should be made to support the work, providing for heavy expenditures in very dry seasons.

Fourth—That a character of supervision should be provided that will keep the forest wardens up to a high state of efficiency and furnish the means of increasing their effectiveness by the proper interchange of experience.

Our system of paying the wardens for actual service rendered and not placing them on a salary works very satisfactorily here as does also the provision of the law by which the Governor commissions men only upon recommendation of the State Forester, and that an unlimited number can be commissioned. The law should be a broad one, which would enable you to use patrolmen, lookout watchmen and any other agencies that have been found so effective in other states in controlling the fire situation. Ex officio wardens have been found in nearly all cases to be unsatisfactory. The report of the forestry committee of the last Conservation Congress upon this question of the forest law is probably the very best report upon this subject, and I believe in it you will find just what you want. * * *

Very truly yours,

F. W. BESLEY,
 State Forester.

THE COMMONWEALTH OF MASSACHUSETTS.

OFFICE OF THE STATE FORESTER,

6 Beacon Street.

BOSTON, November 6, 1914.

MR. G. M. HOMANS, *State Forester,*
State Board of Forestry, Sacramento, California.

MY DEAR MR. HOMANS: Your telegram of November 5th just received, and I hasten to give you in a general way a statement of what I believe each state should have as an up-to-date forest policy. Of course our statutes speak for themselves, and go into the subject quite in detail.

1. In Massachusetts we offer expert forestry services free to all Massachusetts citizens, through the State Forester and his trained assistants. Blank forms for requesting such assistance are available from the State Forester's office.

2. In addition to this expert advice, the State Forester's office has published for free distribution bulletins on the principal subjects, in order that those who desire to practice forestry may have the necessary information readily at hand. These bulletins are not mere compilations on the subject, but are based on actual practice in the state, and are written under the direction of the State Forester by his men, who are really doing that kind of work every day. Such bulletins are as follows:

"Forest Thinnings,"

"Reforestation and Nursery Work,"

"Forest Fire Control and Management," etc.

3. We have a definite organization for handling forest fires. A state forest fire-warden is appointed by the State Forester, who has immediate control. The state is then divided into four divisions, and a district forest warden placed in charge of

each. This man is supplied with a runabout automobile, and goes from town to town within his jurisdiction, and organizes the local town forest warden's work and gives him suggestions as to the most up-to-date method of perfecting his equipment, the placing of his deputies, etc. Each town has a forest warden, who is appointed by the selectmen of the town subject to the approval of the State Forester.

4. We have a state reforestation fund of \$10,000 for demonstrating forest planting in different sections of the state.

5. We have a state forest fund of \$90,000, given us by the recent legislature, which is to continue for four years and is to be expended in the purchase of relatively cheap lands, at a price not exceeding five dollars an acre, to be turned over to the State Forester for future development into state forests.

Our appropriations for purely forestry work are as follows:

(a) \$20,000 for general forestry, which includes the salaries of assistants, running of office, and general expenses.

(b) \$23,000 for forest fire prevention and control. This includes, in addition to what has already been mentioned, the manning of twenty-six lookout stations distributed throughout the state. This amount is augmented by an appropriation of \$2,500 from the national government.

(c) \$5,000 for reimbursing towns having a valuation of not exceeding \$1,750,000, the state reimbursing 50 per cent of an expenditure not exceeding \$500 for forest fire equipment in these towns.

(d) The salary of the State Forester, \$5,000, is paid independent of the above amounts.

(e) In addition to the above, which is strictly forestry work, the State Forester of Massachusetts has \$200,000 for work in the prevention and control of the gypsy and brown-tail moths. This sum is for a definite purpose, but many of our most successful methods are those along forestry endeavors, and hence even here much constructive forestry is carried on.

I think we have already sent you some literature on these subjects, but I will have more sent under another cover. I trust I have covered the subject as you care to have it. Believe me,

Very sincerely yours,

F. W. RANE.

State Forester.

MICHIGAN AGRICULTURAL COLLEGE.

FORESTRY DEPARTMENT.

EAST LANSING, October 29, 1914.

MR. G. M. HOMANS, *State Forester,*

Sacramento, California.

DEAR MR. HOMANS: In reply to your letter of October 17th, I am afraid I can not give you very much advice regarding advisable legislation for California. About all that I could do would be to repeat the recommendations which were made in the reports of the Fifth National Conservation Congress and which you, undoubtedly, have on hand. I am sorry that I can not give you better assistance in the matter. * * * With best wishes,

Sincerely yours,

A. K. CHITTENDEN.

Professor of Forestry.

OFFICE OF
STATE GAME, FISH AND FORESTRY WARDEN.
LANSING, MICHIGAN.

October 19, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR SIR: We are in receipt of your letter of October 15th in which you ask us for our opinion as to the essential principles that should be embodied in a strong forest law. The most important matter to be considered is the appropriation for the assistance of the one who has in charge the duties of the forest fire protection.

This state is new in the work of forest fire protection and could not give you as much information as some of the states in the Middle West. Wisconsin, I understand, has a most remarkable forest fire system, so have some of the states west of us.

We are sending you a copy of the law under which we are working in this state. We need more funds but the system seems to work out very well, as we have it organized at the present time. We need more power to regulate railways and logging and other roads which are not operated by railway companies. We hope to secure some amendments in this connection at the next session of the legislature.

I am sorry we can not give you more information in connection with this work. We are sending you our last report, which may be of some interest to you.

Very truly yours,

WILLIAM R. OATES,
State Game, Fish and Forestry Warden.

MINNESOTA FOREST SERVICE.

OFFICE OF THE FORESTER.

SAINT PAUL.

November 6, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR SIR: In reply to your telegram of November 5th: I do not hesitate to endorse state forest protection through adequate patrol properly financed. It is also necessary to control the disposal of logging slash and that along roads and all rights of way. Also, I believe it is important to control to a reasonable extent campers and others who are liable to leave fires unattended in the woods.

Here in Minnesota we lay particular stress upon cooperation with the railway companies in fire prevention. We require them to assume the entire responsibility for fire prevention along the rights of way. This is accomplished by the companies' patrolmen properly equipped, and by the installation and careful up-keep of good spark-arresting and ash-pan devices, and also by maintenance of clean rights of way.

Very truly yours,

DILLON P. TIERNEY,
Acting State Forester.

OFFICE OF STATE FORESTER.

HELENA, MONTANA, November 7, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR SIR: * * * Montana is in much the same fix as California in so far as inadequate laws are concerned. However, we are fortunate in the respect that our fire season covers at the outside only four months and that the greater part of our valuable timber is either within or adjacent to National Forests where it is well

protected by the government under our cooperative agreement in which the state furnishes funds to the government for protection and makes possible the operation of the Weeks law.

Montana is rapidly being settled up, which fact eliminates to a great extent prairie fires. This is partly due to the cutting up of the country by roads and partly due to the lack of inflammable material caused by close grazing.

The chief concern of Montana is in her timbered districts, the western one third of the state. The timbered area is traversed by three main railroads, Great Northern, Northern Pacific and Chicago, Milwaukee and St. Paul. The latter road has been built since the creation of national forests in this region and therefore in granting the right of way the forest service people stipulated that oil-burning locomotives be used in hauling trains through the National Forests, thus doing away with railroad fires on this line.

The Great Northern Railway, through the Blackfoot, Flathead and Kootenai forests, has practically cleaned up its right of way one hundred feet on either side of the main line. All old logs were piled and burned, rotten stumps were pulled out, and all brush was cut off and burned.

As to what the Northern Pacific Railway has done about right of way clearing I am not informed at the present time, but they have placed patrolmen on their line as well as putting patrolmen to look after their timbered lands, and have made cooperative agreements with the forest service whereby any fire starting within two hundred feet of their tracks, the entire expense of the fire is borne by the railway company; further, they have made an agreement whereby the government takes charge of fires on their lands adjacent to or inside of National Forests and the proportionate amount of the expense is borne by each according to the acreage threatened.

A short railway operating between Butte and Anaconda in 1910 cleared fire lines on either side of their right of way about a hundred feet back and five feet wide, but soon after this work was completed, that is in 1913, the road was electrified, thus doing away with all danger from fire.

The spark arrester has not been a success in this locality—good spark arresters, no draft; good draft, poor spark arrester. Ash-pan inspection by the railway officials has been carried out to a considerable extent, especially during the past season, and no doubt many fires were prevented.

So far I have not come to the point and told you my ideas as to the main features necessary in a law to hold forest fires down to a minimum; first, penalty for leaving a fire unattended; second, for allowing a fire to get away, whether through carelessness or otherwise; third, penalty for incendiary fires. I do not believe in too heavy penalties, as they make a law inoperative and convictions are too hard to secure, as judges and juries do not like to see a person fined too heavily for an offense which the public seems to think a kind of right, being responsible for the fire.

I am a strong believer in a closed fire season. We have no such law in Montana, but we have hopes of getting one through the coming legislative assembly in January, 1915. The law should provide a closed season to conform to the climatic conditions of the state and burning permits be issued by federal or state wardens, working under the direction of the State Forester. These wardens would be responsible for the result of any burning permit issued by them.

If the railroads do not show a disposition toward clearing up their rights of way with only urging, then a law should be passed requiring certain clearing. I believe that the fire line is the best form of protection, as it is less expensive to the company and specifications can easily be drawn up for the construction and maintenance, where right of way clearing, unless the railroads enter into the spirit of the thing little can be accomplished, even with a well worded law requiring them to clean up.

Slash burning is a matter that requires much study, and recommendations can not be made that will fit all kinds of conditions. I would not like to see a compulsory slash burning law in this state, as I consider it is in some cases a useless waste. A plan that is used on the Blackfoot National Forest, which has proven very successful, is the piling and burning of brush for about two hundred feet back from railroad

lines, wagon roads and the boundaries of the cutting areas, thus giving fire fighters a chance to check any fire which might get into the slash and protecting the slash from sparks from the railroad or fire in any form from the wagon roads.

I believe the state should only take the position of cooperator and not try to assume at this time the entire responsibility for fires throughout the state. The state should take an active part in the organization of timber protective associations. I believe our neighbors over in Idaho have a very good law on this subject, but I am not familiar with the exact features of their law.

Montana has no appropriations for fire protection, but the money in the common school income fund is available for fire fighting when deemed necessary by the State Board of Land Commissioners. This year being an unusually hazardous year, this office was given authority to spend what was necessary; and further, we were given authority to write time checks on a certain bank, which time checks were redeemed from time to time by the State Auditor. In this way we were able to pay off our fire fighters on the ground. This matter should receive attention in the construction of a fire law. This is the way we handled our fires this year. Last spring this office sent each deputy game and fish warden a large number of printed letters, a copy of which is enclosed, with the request to the warden that he secure every person who purchased a license as a volunteer firewarden. This was done and to date we have received 4,980 acknowledgments of appointments. Fires were discovered this summer and reported by wire from all parts of the state by the volunteers and others, and if we had no personal knowledge of a good man in the locality whom we could send at once to take charge of the fire, either the Forester or myself left at once for the fire, and in any case one of us were there to pay off the men and settle up the bills. This plan proved very successful and cost very little except the actual cost of the fire fighting, and I believe if we had good paid firewardens stationed at various points throughout the state our organization would be very efficient. It should not be attempted to patrol the state, but rely upon the public to report all fires to the district headquarters and let the district warden take charge, and in case he had two or more fires at the same time he could hire additional men to help him take charge of these fires. By a publicity campaign with no end to it the public can be encouraged to report all fires and report them quicker than could be expected from any patrol force that we can hope to be allowed by any appropriation that we might get.

I have not attempted to write out a law, but I have given you a brief outline of what is being done and what we hope to do in Montana, with my comment. I am sending you, under separate cover, a copy of the forest land laws for your information. I shall be very glad to receive a copy of your law as you prepare it as soon as it is completed, in order that I may get your ideas before recommendations from this office for a new fire law are prepared.

Hoping that you secure the passage of your bill, I am,

Yours very truly,

D. D. JOHNSON,
Acting State Forester.

STATE OF NEW HAMPSHIRE.

OFFICE OF FORESTRY COMMISSION.

CONCORD, N. H., November 7, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Your telegram is at hand this morning calling my attention to your letter of October 15th.

I hope that California will enact legislation for the protection of her forest resources. I should think a system could be worked out in cooperation with the Forest Service and timberland owners' associations. We have such a system here in which the government, the state, the towns, and the timberland owners cooperate in fire protection. The first essential is to see that the department is efficiently manned and for this reason it should be entirely removed from all political control. Then the different branches of the service should be provided with funds necessary to the tasks.

Our work here is divided into four branches: Fire protection, reforesting waste land, acquisition and management of state forests, and educational work among woodlot owners. The state fire work is under the supervision of a local firewarden force, all of which is appointed by the state, the operation of from twenty to thirty mountain lookout stations, and the carrying on of cooperative prevention measures with railroad companies and woodlot owners. We require all lumber operators to clear a strip of slash along railroad lines, and the railroads to patrol during time of drouth. The timberland owners do most of the regular forest patrol, the state supplementing with temporary men during extreme drouth.

I hope the above will be serviceable information. Our biennial report covering the progress of the forestry work for five years will be published next month and copies will be sent to you.

Yours very truly,

E. C. HIRST,
State Forester.

FOREST PARK RESERVATION COMMISSION OF NEW JERSEY.

TRENTON, October 21, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR MR. HOMANS: I am glad to learn by your letter of October 15th, that you are to have an opportunity to revise your forest laws.

To my mind California can do no better than raise the forest fire flag, nail it to the mast and fight under it as long as may be necessary.

You have, it is true, a great task in forestation, but that must follow, it can not precede fire control; if necessary you can afford to put the planting into the background for ten years.

To my mind you will waste your time if you give much attention to cut-over lands other than by way of protection. The time has not come to establish forests in districts already forested if you expect any financial returns. Timber on the Pacific coast will rule too low within the next generation to make any investment in young forests profitable, except of course where there are peculiar needs or particular advantages.

With respect to details I can say little that will be helpful. My experience of California is too limited, and I find it now rather difficult to adjust my later experiences and convictions to conditions that differ so greatly as do those of California from those in New Jersey.

But this much I can say:

1. Work for a fire organization that shall be controlled by a state body, or better still a state official. Let the entire cost of that be paid by the state.
2. Depend upon the people who are most immediately concerned for your local force. Arouse interest by commissioning capable men as firewardens, and if possible let the local wardens represent their communities even at some expense of efficiency.
3. Provide for compulsory service in emergency, but above all don't let those who may be engaged in the fire service acquire a sense of injury. Pay full local rates for service rendered, and give the volunteer as much as the conscript for equal service. We think that our minimum pay law is good as it induces quick work. It might not operate in the same way in your larger territory. We likewise get good results from the annual salary, or retainer, of \$20 and \$10 paid our wardens. It gives us a hold on the men, enables us to *require* reports and bills instead of having to request them.
4. Distribute the local costs in some way that will save the woodland communities. The state should pay a goodly part of the entire expense. We are beginning to think that the supervising organization is enough for the state's share though we still do refund one half the net local charges. If you organize under the township unit.

and I believe that that or its equivalent is the best, you might be able to have the county carry one half the fire fighting bills.

5. Don't on any account trust to volunteers, except of course for fire fighters of the lowest grade, and make your provisions, whatever they are, definite and clear cut. Half what is desirable with a "shall" in front of it is worth infinitely more than all you want preceded by a "may."

6. You will of course provide for proper cooperation with timber owners. My feeling is that in a general way the owner of stumpage should maintain a protective organization exactly as the owner of a building maintains fire insurance. The part of the state and of the local community in each case is to minimize outside risks and to share the cost of maintaining the protective service. Where cut-over lands come in in this scheme is, I confess, a difficult problem. Under the assumption that the public rather than the immediate owner is concerned chiefly in the future crop, it would seem that the greater part of the cost of protecting such land should fall upon the community.

7. Put money in your purse. You know as well as I that it is time wasted to frame forestry laws, or forest fire laws, unless there is an assurance that money to execute them will be provided. "Nothing for nothing" applies as well here as elsewhere. I rather think that if I had the choice I'd take \$50,000 a year and your present laws, bad as they are, rather than \$5,000 a year and the best laws that could be enacted.

Sincerely yours,

ALFRED GASKILL,
State Forester.

THE NEW YORK STATE COLLEGE OF FORESTRY

AT SYRACUSE UNIVERSITY.

SYRACUSE, N. Y.

SYRACUSE, N. Y., November 6, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

MY DEAR MR. HOMANS: Your letter of October 22d to the College of Forestry has been referred to me for reply. We are very glad to hear the news of California and hope that you will be successful in establishing a good strong forest law for California. In accordance with your request that we write you our opinion of the essential principles that should be embodied in a strong forest law, I beg to submit the following:

1. A state-wide forest fire protection system with rangers or patrolmen under a civil service system if possible and well supported by sufficient funds to carry out a good strong protective policy. This is by all means the most important initial step in the solving of any state forest problem.

2. The acquisition and management by the state of cut-over lands, school lands and other tracts acquired in one way or another for demonstration forests, experiment stations and to serve as a source of future timber supply. In the case of California, of course, this is being largely handled by the United States Forest Service, but undoubtedly there are other areas that are now being burned over from year to year which should be protected and managed by the state.

3. The encouragement of forest planting by the maintenance of several forest nurseries where distribution of seedlings at cost to residents of the state for forest planting can be made. If the latter could not be adopted, certainly demonstration forests should be planted in various parts of the state by the state forest department.

4. The modification of present tax laws in regard to timberlands. This will probably come with more difficulty and more slowly than any other provision of the state forest law, but this is believed to be a very important problem of the forest states sometime in the future.

5. A law should be included which shall permit of the enforcement of certain measures of forest protection aside from those outlined above in connection with the

firewarden system. That is, as in Minnesota and New York, there should be some provision whereby the state can force private operators to dispose of their brush or slash in a cheap and effective way.

6. Last, but by all means the most important, is that there should be a strongly supported state forest department of technical foresters which should consist of graduates of recognized forest schools and should be under civil service appointment. Without adequate appropriations to carry on the above measures, a state forest policy no matter how well outlined and planned and well supported by laws can not do much. Louisiana is an excellent example of a state with a splendid set of laws but which can accomplish nothing for the reason that it lacks money.

If there is any further specific information you would like from time to time, please feel free to write us. I have just briefly sketched provisions of a good strong forest law above, and if you would like to have us go more into detail or care to have our opinion as to how matters are working out here in New York State, we would be very glad to have you write us. With best wishes, I am

Very truly yours,

NELSON C. BROWN,
Professor of Forest Utilization.

STATE OF NEW YORK.
CONSERVATION COMMISSION.

ALBANY, October 19, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Yours of October 15th received.

We think that we have in this state a very excellent forest fire law. The statute provides for preventive measures in protecting forests. The Commission has built fifty-two mountain stations and observers are maintained at these points during the fire season. We also have about seventy rangers who are patrolling the territory, extinguishing fires, posting notices, securing cooperation of people, regulating the setting of fires to clear land, etc. We send you under separate cover a copy of Bulletin 10 on forest fires, which will give you full information. Some time ago we sent you copy of our third annual report and believe that you will find in there information of value.

The vital point is that you must necessarily have a provision for the maintenance of a patrol and protective system. If there is any further information you desire, we would be glad to hear from you.

Very truly yours,

CONSERVATION COMMISSION, by ALBERT E. HOYT,
Secretary to Commission.

NEW YORK STATE COLLEGE OF AGRICULTURE
AT CORNELL UNIVERSITY.
DEPARTMENT OF FORESTRY.

ITHACA, N. Y., October 29, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR MR. HOMANS: In reply to your letter of October 22d, it seems to me that the thing primarily needed in California is a better organization of the forest fire service for the lands outside of the National Forests, the direction of which would naturally be a function of the State Forester's office. The problem is, I believe, more a question of proper education than of the wording of the law, for unless public sentiment is behind it, it is difficult to enforce such measures as are apparently necessary. In the matter of education in forest fire control, California can not do better than to take a leaf out of the book of forest fire work that has been done in

the Pacific Northwest. As to the details of organization, a good many valuable suggestions ought to be gleaned from the forest fire laws of New Jersey, Massachusetts, Pennsylvania, and British Columbia. With the example before you of the successful work which has been done by the Forest Service in controlling fires on the National Forests, it is unnecessary for one living at a distance to enlarge on methods of organization, but personally, I believe that much can be done in almost every state in developing an organization of volunteer forest fire fighters somewhat analogous to the system of call-men in the old-fashioned fire department of small cities and towns.

Very truly yours,

RALPH S. HOSMER,
Professor.

NORTH CAROLINA GEOLOGICAL AND ECONOMIC SURVEY.

FORESTRY DIVISION.

CHAPEL HILL, N. C., November 2, 1914.

MR. G. M. HOMANS, *Forester*,
Sacramento, California.

DEAR MR. HOMANS: Your letter of October the 15th has been received and would have been answered sooner but for my absence from the office. Perhaps, the best way I can answer your query in regard to a forest law would be to send you a copy of the law which was introduced into the general assembly of North Carolina two years ago. Many of the strongest features of this law were cut out by the subcommittee appointed to reconstruct the bill, which was then very decidedly defeated. However, we hope to have one presented along somewhat the same lines during the coming session and I trust that it will receive more support.

It has been suggested that possibly we might wish to incorporate in this bill something in regard to forest taxation. I think this unwise, and if the question of forest taxation is brought up, it should be in an entirely separate bill. This is not as important a question in North Carolina as it is in many other states as our assessments and real estate are very low.

Very truly yours,

J. S. HOLMES,
Forester.

UNIVERSITY OF TORONTO.

FACULTY OF FORESTRY.

TORONTO, CANADA, November 6, 1914.

MR. G. M. HOMANS, *State Forester*,
State Board of Forestry, Sacramento, California.

DEAR SIR: * * *

The essential principles that should be embodied in a forestry law for any state, as every sensible man will admit, of whatever party, must be those first of all upon which all government is built, namely, protection of person and property. That to furnish adequate protection of forest property against fire is the first duty of the state toward forest property, is axiomatic. And such protection is not adequately given by mere enactment of law, but only by providing the machinery for carrying the law into effect. So important are the forest resources to the community that it is not sufficient to punish incendiaries, but preventive measures, an organized effort to prevent fires, are a state necessity, using the most approved modern machinery, watch tower, telephones, patrols, etc.

When the state is making a real effort to stop forest fires (which are the disgrace of our nation), then and then only, in my opinion, may the state interfere with such practices on the part of forest owners (lumbermen) as increase the fire danger, and

may, for instance, legislate on brush disposal, forcing the owner to keep his premises without a public nuisance.

The second principle, which I recognize, is that the state may do what the individual can not do or can not do as well as the state, especially if thereby broader interests of the state are served.

If the destruction of forest cover would unfavorably influence the water-stages of a river, the stability of the soil of the denuded area, or cause other damage, the state should exercise its authority to prevent it, according to the old established principle of law: "*Utere tuo ne alterum noceas*"—nobody may be allowed to use his property in such a manner as to injure another.

Lastly, believing as I do that private interest has little incentive to provide for the future and, since forestry is mainly a provision for the future, the state should fulfill *providential* functions under the same principle as stated above, recognizing that the other who is to be protected against the results of mismanagement is the future citizen. In other words, I consider that the state should set aside forest reservations and manage them with a view to the future interests of the commonwealth.

To enact these self-evident principles of forest politics into law and provide the machinery for making it effective seems to me the plain duty of the day for every legislature. That such legislation should be progressive and with due regard to the necessity of gradual change and compensation of private interests, where justified, goes without saying. A sane board of forestry should be given power to inaugurate measures in detail under the legislated principles.

Yours truly,

B. E. FERNOW,
Dean.

OREGON AGRICULTURAL COLLEGE.

CORVALLIS, OREGON.

November 9, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Your letter of October 21st has been received. From my experience with the operation of forest fire laws, I am convinced that any system of administration which does not provide for complete control through one central organization is lacking in efficiency. My experience of more than four years as a member of the State Board of Forestry leads me to the conclusion that any system of cooperation with associations of timbermen, or with counties, which does not leave the appointment of patrol men and the administration of all funds collected for fire patrol purposes in the hands of the State Forester, is a mistake.

It is also my firm conviction that public interest demands that all slash from logging operations in situations where there is any likelihood of its proving to be a fire menace, should be burned under the direction and control of the State Forester.

To state in another way some of the things I have indicated above, I believe in a state forestry law, so worded that direct and decisive action is possible under it. Any system which provides for secondary control agencies is bound to result in duplication, and consequently, in inefficiency. What the timberman wants and what the public interest demands, is a dollar's worth of service for every dollar expended on the work.

Very sincerely yours,

GEO. W. PEAVY,
Dean, School of Forestry.

THE TIMBERMAN.

GEORGE M. CORNWALL, Publisher.

PORTLAND, ORE., November 5, 1914.

G. M. HOMANS, Esq., *State Forester*,
Sacramento, California.

MY DEAR MR. HOMANS: I am pleased to acknowledge receipt of your favor of October 17th asking me to point out briefly the essential principles that should be embodied in a forest law for California.

After examining the various laws on the Pacific coast, I am of the opinion that the Oregon law contains the most practical features embodied in any forest fire laws now in existence.

I was talking the other day with Don Cameron, an old experienced timber operator, on the subject, and he coincides very earnestly in the idea that the system of compulsory fire patrol, under the Oregon statute, has in a very great measure solved the question of an effective fire prevention system.

I hope that you may be able to form a very satisfactory and efficient fire law for your state. * * *

Very truly yours,

GEORGE M. CORNWALL,
 Publisher.

OREGON STATE BOARD OF FORESTRY.

SALEM.

October 21, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Your letter of October 15th is received. One of the prime essentials of an adequate forest law is, in my opinion, a non-political board of forestry, and one whose members can not be removed at the pleasure of the Governor or any other political state official.

In a great majority of cases the state appropriations for forestry work should be used largely in law enforcement and investigative work, while the timber owners themselves should be expected to furnish most of the funds for patrol and fire fighting work. With this end in view Oregon has encouraged the organization of cooperative fire patrol associations. The compulsory fire patrol law enacted in 1913 further carries out this idea in that under its provisions every timberland owner must furnish patrol for his land or else pay his acreage cost for patrol furnished through the state or associations.

Our present forest laws have given good satisfaction and with a few modifications, which I will outline below, I can perhaps do no better than cite you to these laws as my idea of adequate forest legislation under conditions prevailing in the western states at the present time.

My suggestions for the improvement of our present laws are as follows:

1. More convictions would probably be secured if all violations of the forest fire laws were made justice cases instead of grand jury cases.

2. Section 5, chapter 278, laws of Oregon for 1911, should be changed so as to give the State Forester, or a state firewarden acting under instructions from the State Forester, power (in case of refusals or neglect by any person or persons at fault to take the necessary precautions) to have the work done to the extent he deems requisite to public safety and to recover the cost thereof from the offender by action for debt or to have the cost of the work stand as a lien against the property.

Very truly yours,

F. A. ELLIOTT,
 State Forester.

LEHIGH UNIVERSITY.

SOUTH BETHLEHEM, PENNSYLVANIA.

December 1, 1914.

MR. G. M. HOMANS, *State Forester of California,*
State Board of Forestry, Sacramento, California.

MY DEAR MR. HOMANS: I know that you will be interested in hearing that our Pennsylvania Conservation Association has taken action looking to urging on our legislature at their coming session increased appropriations for fire protection and fire fighting in this state, and I hope that the efforts of the friends of forestry in California in promoting organization for fire protection with liberal appropriations from the state for this purpose will be successful.

The great forest fires that you have in the West resulting in loss of life and enormous damage to property are of course of far greater financial importance than those that we have with our comparatively depleted forest areas in Pennsylvania, but we have the same problem that you have in California, because, while the greater portion of our large timber has been cut, we need the fire protection to promote the growth of new timber, and you of course need it for the protection of growing timber.

Surely there can be no question but that the state ought to protect its forests. The protection that can be afforded by private interests is unorganized, desultory and ineffective, and of course that afforded by the United States government is necessarily limited mainly to the protection of the national forests. There is no doubt but that there is a growing sentiment throughout the country in favor of such protection being afforded.

Sincerely yours,

HENRY S. DRINKER,
President of the American Forestry Association.

PENNSYLVANIA DEPARTMENT OF FORESTRY.

HARRISBURG.

October 20, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR SIR: Under separate cover we are sending you a copy of our forest laws. The only one which is not included in this booklet is the law which permits the leasing of camp sites upon state forests.

We believe that the strong point for you to urge is the protection of your forests from fire. This no doubt can best be done by some law which permits the cooperation of your state with the national government, with local protective associations, and any other interest which may be used in keeping fires out of the woods. Undoubtedly the establishment of patrol systems combined with observation towers connected by telephones, is the most satisfactory method known at the present time. The law should be so framed as to permit the development of some such system. It is altogether likely that if you can arouse the interest of the people and have them establish protective associations because of the support and cooperation which they will get from the state and the national government, you will do a great deal towards the prevention of forest fires. At least we are finding it so in this state and we have not gotten very far along with the system even yet.

In connection with forest fires we believe that the state department should be given authority to institute criminal suits for violation of the fire laws rather than leaving such steps to private individuals. If conviction is obtained in the criminal suit then the individuals damaged have a basis for instituting their civil suits. We believe that more can be accomplished with the railroads by getting their systematic

cooperation than by trying to force them into doing things which they think they do not want to do. The preservation of forests, however, is a distinctly selfish proposition from the standpoint of railroad business, and if the officials can be induced to see this point they will fall all over themselves in helping you to push it along.

Just what might be more particularly applicable to your region I do not know.

Yours truly,

ROBERT S. CONKLIN,
Commissioner of Forestry.

THE PENNSYLVANIA STATE COLLEGE.

SCHOOL OF AGRICULTURE AND EXPERIMENT STATION.

DEPARTMENT OF FORESTRY.

STATE COLLEGE, PA., November 7, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: I take this opportunity of writing you to tell you how interested we all are in your efforts to secure more effective legislation for the prevention of forest fires. The forest fire problem in a state with extensive forests is more than a local problem. Attempts to secure results by unorganized local efforts have failed in every locality except where the forests are small in area as in a woodlot region. With extensive forest areas, forest fires can not be controlled except by a well organized and strongly centralized forest fire system with a permanent force for fire patrol. Provision should be made for the removal of the menace of forest fires from the slashings on cut-over lands and from railroads.

Yours very truly,

J. A. FERGUSON,
Professor of Forestry.

STATE OF SOUTH DAKOTA.

DEPARTMENT OF SCHOOL AND PUBLIC LANDS.

DIVISION OF FORESTRY.

CUSTER, November 6, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR MR. HOMANS: Reference, your telegram of the 5th instant; also letter bearing date October 15, 1914. * * *

Relative to what I would consider the essential principles desirable in a strong forest law, the protective features are of prime importance; after this, a close adherence to certain well established principles of forest management; also proper government of the range, both as to protection from fire and overgrazing and as to improved conditions.

Under protection, of special importance are lookout stations, riding patrols and railroad patrols. Our experience has been that foremost of these features in value is the lookout. The other two features are important in the order named. However, what is true of South Dakota may not be entirely applicable to California. The greatest source of forest fires with us is lightning, after that travelers, campers, sawmills, and railroad locomotives, in the order named.

We have an efficient slash-burning law applicable to state owned lands, and hope to extend its operation over privately owned land as well during the coming legislative session.

While we have no law directly applicable to travelers, sawmills, and campers setting fires, we are able to prosecute under "carelessness" and "negligence" statutes.

With our state, having producing forests, we are endeavoring to handle our timber by approved methods of management. Our cutting system allows of an 80 per cent cut of merchantable, the diameter limit being 12 inches. Roughly we leave 10 per

cent above diameter limit for seed, and 10 per cent for stand. Our cutting regulations are very similar to the United States Forest Service regulations. We aim to reseed or replant all of our burns, and use approved methods of protection from the ravages of the beetles.

Our fire plan embraces the protection of our range, and we endeavor not to overstock, but to so distribute the stock as to keep the range evenly grazed. We provide watering places for stock in certain places, to utilize dry areas and to save moving at certain times of the year. Our season is May 1st to November 1st for summer, and November 1st to May 1st for winter. I am contemplating changing the season to May 15th to begin the summer, and to April 15th to end the winter, in order to give the ranges a stronger start before turning on in the spring.

Our fire season is also long in South Dakota—from April 1st to November 15th, usually; the spring and fall being the more dangerous. Beyond, or in addition to our state protection work, we have a cooperative agreement with the Forest Service under section 2 of the Weeks law, and find it very valuable.

We have ample appropriations for our strictly protection and management work in forestry, but none as yet for investigation and publicity work, such as bulletins, etc.

The success of the state work depends very largely upon the volume of interest one is able to create among the people. Without a lively interest there is small hope for adequate and comprehensive forestry laws, or for money to enforce them. While our state work here is in its infancy, yet the people are stirred to a considerable interest, and, while we by no means have a perfected policy or adequate laws, we are led to hope for them.

Our legislature also convenes in January, and I would be pleased to keep you in touch with what we are endeavoring to do, considerably in advance if possible. I would appreciate word from you in this same connection.

By all means and at all times endeavor to secure proper appropriations for protection and management. Features well to be considered in this work, are the "watershed" and the "playground" ideas; these particularly appeal to people of popular conservation ideals, and to conservation and nature-study bodies. The game feature we also emphasize considerably in this state. The income from our forests goes directly to the public schools, thus creating interest that is widely diffused.

Conservation, forestry—are popular ideals, but their strict application is very greatly a matter of education. I wish you every success, both in your fight with organized opposition to the work, and in your endeavor to get proper laws and appropriations.

Sincerely yours,

GEO. W. ROSKIE.
State Forester.

DEPARTMENT OF GAME, FISH AND FORESTRY.

STATE OF TENNESSEE.

NASHVILLE, TENN., October 20, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: We are mailing you under separate cover a copy of the game, fish, and forestry laws of this state. We desire to call your attention to one material defect in our law, and that is, that no provision whatever is made for revenue to support the department; with this exception I think that we have a splendid forestry law.

One feature that is almost absolutely essential is a provision by which the state forester can cooperate with the national foresters.

If there is any way we can serve you when your legislature meets, please advise us, and we will take pleasure in doing so.

Yours very respectfully,

W. D. HOWSER.
State Warden.

STATE OF VERMONT.

BURLINGTON, VERMONT, October 20, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR SIR: I have your letter of the 15th, and I am sorry to hear that there is some opposition to the forestry work in California. We find practically no opposition in Vermont except from the standpoint of economy. Of course it is not always easy to get as large appropriations as we need.

I should judge, from what I know of California, that the first thing necessary is to stop forest fires, and that larger appropriations should be available for the maintenance of lookout stations and patrols in cooperation with the government. There should also, in my opinion, be provision for active educational work so as to bring about better feeling throughout the state toward forestry. It seems to me that at least one man should be busy most of the time addressing various organizations on the forestry needs of the state.

Yours very truly,

A. F. HAWES,
State Forester.

STATE OF WEST VIRGINIA.

DEPARTMENT OF FORESTRY, GAME AND FISH.

BELINGTON, October 19, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR SIR: I have your letter of the 15th inst., and beg to say that West Virginia has made great progress in forest fire work during the past year, considering the very small appropriation with which we have had to work.

It is rather difficult to give my views in a letter as to the most essential principles to be embodied in a forestry law, as different conditions require different remedies.

We are establishing lookout stations and patrol routes, and are making considerable progress in getting the timber land owners to cooperate with us in this work.

My third biennial report will be printed in the next two or three weeks, at which time I will send you a copy giving my views on this subject in better shape than I can give you in a short letter.

I am sending you copy of our law, copy of posters I am using, and also copy of my letter of general and special instructions to patrolmen and lookout watchmen. Am also sending you copy of last bulletin I issued to the newspapers, which will give you some idea as to what we are doing. I issue a bulletin every week setting out some feature of our work. I am also sending you the last annual of the West Virginia Forest, Game and Fish Protective Association. I believe in using every means possible in preventing fires rather than wait until they start and spend time and money in trying to extinguish them.

Yours very truly,

J. A. VIKESNEY,
Forest, Game and Fish Warden.

UNIVERSITY OF WASHINGTON.

COLLEGE OF FORESTRY.

SEATTLE, October 26, 1914.

MR. G. M. HOMANS, *State Forester,*
Sacramento, California.

DEAR SIR: In reply to your letter of October 21st, I must say that I was surprised to learn that the progressive state of California has not done more to date towards establishing a thorough forest policy with thoroughgoing forest laws.

I should think that a law along the lines of the law in force in the State of Oregon

might serve as a model. Oregon has, on the whole, a very excellent law, although there is still some room for improvement. * * *

If in the mean time we can be of any further service to you, feel free to make your wants known.

Very truly yours,

HUGO WINKENWERDER,
Dean.

STATE OF WASHINGTON.

DEPARTMENT OF FORESTRY.

OFFICE OF STATE FORESTER AND FIREWARDEN.

OLYMPIA, WASH., November 7, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Your letter of October 15th came just as I was leaving Olympia, and upon my return yesterday I received your telegram.

In reply to your question as to what, in my opinion, are the essential principles that should be embodied in a strong forest law, will say:

A reasonable appropriation should be made for the forestry department in order that it might carry out the provisions of the law.

Legislation to the effect that owners of logged-off lands should burn over the same when requested so to do by the state forester, or his assistants, and if such owner failed or refused to comply with such request, that the state forester could direct the same to be done at the expense of the state, and such expense charged up against and collected from the owner of such lands; and providing that any one who permitted a fire to escape from his premises should follow the same to any premises to which it might spread, and control or extinguish the same, and upon failure to do so the state forester or his assistants could do so, and the expense thereof be charged against and collected from the owner of the property from which such fire escaped.

Also a law covering the burning of inflammable material along railroad rights of way, and by contractors in the construction of railroads and public highways, telephone, telegraph and electric lines.

Stringent laws should be enacted covering the matter of campers leaving camp fires unextinguished; also a very stringent law providing for the punishment of those who wilfully set fires upon lands other than their own.

Am sending you a copy of our present laws, to which I trust there may be some amendments during the coming session of the legislature.

Trusting that such legislation may be passed as will be of great benefit to your state, with very best wishes, I am,

Very truly yours,

E. W. FERRIS,
State Forester.

STATE BOARD OF FORESTRY.

WISCONSIN.

MADISON, October 19, 1914.

MR. G. M. HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Your letter of the 15th at hand, and enclosed I am sending you a compilation of our laws relating to forest and marsh fires. I think that our law in regard to fire prevention by the railroads is probably stronger than any other state, and has proved very satisfactory, especially the provision that we can order out of service any engine which is not properly equipped.

Our firewarden law leaves much to be wished for. On our state forest reserves we have our own forest rangers and patrolmen, with a pretty complete system of roads.

fire lines, lookout towers, and a telephone system, so that we are in good shape as far as the forest reserve is concerned.

The idea of the legislature in making the town chairmen town fire wardens and road supervisors deputy town firewardens, was to place the responsibility and expense for fighting fires directly upon the local community, so that they would be very careful that settlers do not set fires. The trouble is, as you know, so many town officers, as well as settlers, do not appreciate the damage that is done by forest fires, especially when they only burn cut-over lands.

I asked the legislature to pass a law providing for an annual tax of 2 cents per acre on all wild and unimproved lands, the money to be used solely for a statewide forest fire patrol, under a carefully organized county system. I believe that this is the proper system, but we found it impossible to secure the passage of such a law, on account of the short-sighted opposition of the landowners themselves.

If they ever get to the point where they really want to stop fires, they won't object to a tax of 2 cents per acre per annum. If you can not secure the passage of such law, the next best plan, I think, is to provide that in cases of emergency, you, as State Forester, can appoint additional firewardens in any county of the state, and that in such cases one half of the expense should be borne by the state, and one half by the county, though of course you will have to limit the amount which any one county can expend in any year.

In the compilation of the laws which I am sending you, you will note that we have such a provision under section 1494-48a, which you will find on page 5, and that each county's share is limited to \$5,000 per year. I am asking the coming legislature to amend the law so that the state will make the payment in the first instance, as we find that woodsmen will not willingly fight fires unless they are paid promptly.

Yours truly,

E. M. GRIFFITH,
State Forester.

SENATE BILL No. 943 IS NO INNOVATION.

Recognition of the need and purpose of forest protection is made by some twenty states. This recognition finds expression in legislative measures passed, and, in many cases, well enforced. A clear conception of laws adopted by these states will be convincing to those who maintain a doubt as to whether the State of California should make adequate provision for the protection and perpetuation of her forests. There are no grounds whatever for such a doubt; this state, with a forest wealth third in abundance, already owes a debt to her future citizens by virtue of having permitted the destruction of vast areas of her woodlands; and the debt is annually increasing as a monumental disgrace to the state. Can we not take a lesson from the sincere efforts being made by other states? Attempts to secure laws similar to the following have been made in California but derogatory pressure has invariably been brought to bear and the good features forced to succumb to selfishness.

The following extracts exemplify the manner in which the efficiency of certain features is recognized by several states as indispensable to a forest protection policy:

Fire Patrois.

Oregon—Section 1, Act Feb. 26, 1913, H. B. 371 (Sess. Laws, Chap. 247): Every owner of timberland in the State of Oregon shall furnish or provide a sufficient fire patrol therefor, during the season of the year when there is danger of forest fires, which patrol shall meet with the approval of the State Board of Forestry.

Section 2, Act Feb. 26, 1913, H. B. 371 (Sess. Laws, Chap. 247): In case any owner or owners shall fail or neglect to provide such fire patrol, then the State Forester, under direction from the State Board of Forestry, shall provide the same at a cost not to exceed five (5) cents per acre per annum. Any amounts so paid or contracted to be paid by the State Forester, shall be a lien upon the property, and shall be reported by the State Forester to the county court of the county in which such lands are situated, and shall by such court be levied and collected with the next taxes on such lands in the same manner as taxes are collected. Said county court shall instruct the proper officer to extend the amounts on the assessment roll in a separate column, and the procedure provided by law for the collection of taxes and delinquent taxes shall be applicable thereto, and upon collection thereof, the county court shall repay the same to the State Forester to be applied to the expenses incurred in carrying out the provisions of this act.

NOTE—The State Forester of Oregon writes as follows: "Our compulsory fire patrol law has the hearty support of practically all progressive timberland owners in the state. These owners have in the past voluntarily organized associations, and since the patrol law has resulted in making all timberland owners contribute toward the cost of the work, rates of assessment have in general been somewhat decreased."

Minnesota—Section 3792: As soon as practicable after this act shall take effect, the State Forester may, with the approval of the State Forestry Board, create and establish patrol districts, including all lands of both state and private ownership, upon which there is a probability of forest and brush fires starting, and establish rangers over the said districts. (Laws 1911, Chap. 125, sec. 10.)

Washington—Section 5277-17: Every one operating a stationary engine, for the logging of timber, or the clearing of land of tree stumps or other wood material, shall during the closed season:

(a) Maintain a watchman at the point where the said donkey engine, or other portable or stationary engine may be located, said watchman to be on duty for at least two hours following every time when the said donkey engine, or other portable stationary engine shall cease operations.

(b) Cut down all snags, stubs and dead trees over twenty-five feet in height within a radius of fifty (50) feet from each donkey engine, or other portable or stationary engine. (Laws 1911, Chap. 125, Sec. 17.)

Section 5277-18. Every one operating a logging locomotive during the closed season, shall: Have a man whose duty it shall be to follow each logging locomotive,

except a locomotive using oil for fuel, for the purpose of acting as fire patrol, the said man to begin the said patrol at approximately thirty (30) minutes after the starting of the logging locomotive which it is his duty to follow.

Any one who shall violate any of the provisions contained in section 5277-16, 5277-17, or 5277-18, shall be punished by a fine of not to exceed one hundred dollars (\$100.00) or by imprisonment in the county jail for not less than thirty (30) days. (Laws 1911, Chap. 125, Sec. 18.)

Disposal of Slash and Debris—Watershed Protection.

Minnesota—Section 3797: Where and whenever in the judgment of the State Forester or district ranger there is or may be danger of starting and spreading of fires from slashings and debris from the cutting of timber of any kind and for any purpose, the State Forester or district ranger shall order the individual, firm or corporation, by whom the said timber has or is being cut, to dispose of the slashings and debris as he may direct.* Where conditions do not permit the burning of the slashings and debris over the entire area so covered, the State Forester may require the person, firm or corporation by whom the timber was cut, to dispose of such slashings and debris in such a way as to establish a safe fire line around the area requiring such protection, the said fire line to be of a width and of a character satisfactory to the State Forester. * * * (Laws 1911, Chap. 125, Sec. 15, amended Laws 1913, Chap. 159, Sec. 4.)

Washington—Section 5277-16: Every one clearing right of way for railroad, wagon road, or other road, shall pile and burn on such right of way all refuse timber, slashings, choppings and brush cut thereon, as rapidly as the clearing or cutting progresses, and the weather conditions permit, or at such other times as the forester, or any of his assistants, or any warden may direct, and before doing so, shall obtain a permit.

During the closed season such burning shall not be required to be done, while the forester, any of his assistants, or any warden in authority shall refuse to issue a permit for such burning. * * * (Laws 1911, Chap. 125, Sec. 16.)

Oregon—Section 11, Act Feb. 24, 1911 (Sess. Laws, Chap. 278): All persons, firms or corporations engaged in logging, or permitting logging upon their lands, in this state, shall each year, burn their annual slashings, by which is meant the tops and inflammable refuse left after lumbering, that may carry fire or cause it to spread, at such time and in such manner and with such provision of help as will confine the fire to their own lands, and if such burning is done between June 1st and October 1st, shall first cut down all dead trees or snags over twenty-five (25) feet high. Builders of trails, roads, or railroads in this state shall immediately destroy or remove all inflammable material resulting from constructing or clearing for such improvements unless prevented under the provisions of section 8 of this act. * * *

North Carolina—Section 1, Chap. 56, Laws 1913. That any person, firm or corporation owning lands or the standing timber on lands within four hundred feet of any watershed held or owned by any city or town, for the purpose of furnishing a city or town water supply, upon cutting or removing the timber, or permitting same cut or removed, from lands so within said four hundred feet of said watershed, or any part thereof, shall, within three months after cutting, or earlier upon written notice by said city or town, remove or cause to be burned under proper supervision, all tree tops, boughs, lops and other portions of timber not desired to be taken for commercial or other purposes, within four hundred feet of the boundary line of such part of said watershed as is held or owned by such town or city, so as to leave such space of four hundred feet immediately adjoining the boundary lines of such watershed so held or owned, free and clear of all such tree tops, lops, boughs and other inflammable material caused by or left from cutting such standing timber, so as to prevent the spread of fire from such cut-over area and the consequent damage to such watershed.

*See also section 5300 (p. 12) which requires, in regard to *all* lands within the state, that notice shall be given the State Forester in advance of logging operations.

Timber Districts Assessed for Protection.

Maine—Section 2, Chap. 193, Laws 1909: An annual tax is hereby assessed upon all the property in said district, including rights in public lots, to be used for the protection thereof. Said tax shall be due and payable at the date of the assessment of the state tax, in the years when the legislature is in session, and for other years it shall be due and payable in one year after the date of such assessment. * * *

Brush Burning.

Oregon—Section 7, Act Feb. 24, 1911 (Sess. Laws, Chap. 278): During the period between June 1st and October 1st, which is hereby designated the closed season, it shall be unlawful for any person or persons to set on fire, or cause to be set on fire any slashing, chopping, woodland or brush land, either his or their own or the property of another, without written or printed permission from a firewarden and compliance with the terms thereof which shall prescribe the conditions upon which the permit is given and which are necessary to be observed in setting such fire and to prevent it from spreading so that life or property of another may be endangered thereby. This restriction shall not apply to the burning of log piles, stumps or brush heaps, in small quantities, under adequate precautions and personal control, and in accordance with any regulations which may be adopted by the State Board of Forestry for the purpose of insuring public safety; but if any such burning without permission shall result in the escape of fire and injury to the property of another, this shall be held prima facie evidence that such burning was not safe and was a violation of this section. * * * Whenever, or wherever, during an open season for the hunting of any kind of game in this state, it shall appear to the governor upon the showing of the State Forester that by reason of extreme drought the use of firearms or fire by hunters is liable to cause forest fires, he may, by proclamation, suspend the open season and make it a closed season for the shooting of wild birds and animals of any kind for such time as he may designate, and during the time so designated all provisions of law relating to closed seasons for game shall be in force.

Washington—Section 5277-9: No one shall burn any forest material until all dry snags, stubs and dead trees over twenty-five (25) feet in height, within the area to be burned, shall have been cut down, and until such other work shall have been done in and around the slashing or chopping, to prevent the spread of fire therefrom, as shall be required to be done by the forester, or any warden or ranger.

When any person shall have obtained permission from the forester, or warden or ranger, to burn any slashings made for the purpose of clearing land, the warden may, at his discretion, furnish him with a man to supervise and control the burning, who shall represent and act for such warden, and shall have all the power and authority of a warden while engaged in such service, including the right to revoke such permit, if in his opinion the burning authorized would endanger any valuable timber or other property. Such man shall serve only until such time as the party burning may be able to keep the fire under control himself.

The forester and wardens are hereby authorized and empowered to employ a sufficient number of men to extinguish or prevent the spreading of any fires that may be in danger of destroying any valuable timber or other property in this state. The forester, or any warden by special authority of the forester may provide needed tools and supplies, and transportation when necessary for men so employed.

Every man so employed, and also the representative of the warden supervising the burning, shall be entitled to compensation of twenty-five cents per hour for each hour's actual service; and the warden shall issue a certificate to each man so employed showing the number of hours worked by him and the amounts due to him, upon which, after approval by the forester, the man shall be entitled to receive payment from the state in the manner provided for in section 5277-3.

Any person refusing to render assistance when called upon by any warden, shall be guilty of a misdemeanor, and shall be punished by a fine of not less than ten dollars (\$10.00) nor more than one hundred dollars (\$100.00). (Laws 1911, Chap. 125, Sec. 9.)

Fire Fighting.

Oregon—Section 45: Whenever fire is discovered in or approaching woodlots, forests, or wild lands, whether the same be owned by individuals, corporations or by the commonwealth, it shall be the duty of the firewarden, immediately, to take such measures as are necessary for the extinguishment of the fire. He shall have authority to employ such other persons as, in his judgment, may be necessary to render assistance in extinguishing fire; and whenever it shall not otherwise be possible for him to secure a sufficient number of persons to assist in extinguishing fire, he is hereby given the power and authority to compel the attendance of, and the rendering of assistance by, persons, in the extinguishing of fire under the penalties prescribed in this act. The district firewarden, while engaged in performing the duties imposed by this act, shall receive as compensation twenty-five (25) cents per hour, and his actual, necessary expenses incurred; and the persons so employed, or compelled to assist the warden, in the extinguishment of fire, shall receive as compensation for their services fifteen (15) cents per hour. (May 13, 1909, Sec. 5, Sess. Laws, p. 781.)

Minnesota—Section 3799: The wages and expenses of men summoned or employed to fight forest fires actually burning, shall be fixed and paid for by the State Forester and the labor reckoned and paid for by the hours of labor performed, which shall not exceed the rate of 25 cents per hour employed; provided no pay shall be given for fighting fire within one mile of the residence of such person unless employed by the State Forester or his assistants. * * * (Laws 1911, Chap. 125, Sec. 17.)

General Forest Protection. District Firewardens.

Washington—Section 5277-16. * * * No one slashing brush or timber for the purpose of clearing land, or cutting or logging timber, shall fell, or permit to be felled, trees, in such a manner that the tops or branches shall fall into green timber not owned by the one felling or permitting the felling of such trees, without first obtaining permission of the owner of said green timber. (Laws 1911, Chap. 125, Sec. 16.)

Oregon—Section 43: As soon after the approval of this act as may be convenient, the commissioner of forestry shall appoint in each borough and township in this commonwealth, if in his judgment necessity exists for such appointment, a suitable and competent person, who shall be known as the district firewarden of the particular borough or township wherein he shall be appointed. The persons appointed district firewardens shall be expressly chosen to carry out the provisions of this act, by reason of their physical fitness and their good reputation for sobriety, honesty, and ability to perform the duties herein demanded and required. (May 13, 1909, Sec. 3, Sess. Laws, p. 781.)

Section 5, Act Feb. 24, 1911 (Sess. Laws, Chap. 278): Any and all inadequately protected forest or cut-over land adjoining, lying near, or intermingled with other forest land and covered wholly or in part by inflammable debris or otherwise likely to further the spread of fire, which by reason of such location or condition or lack of protection endangers life or property, is hereby declared to be a public nuisance and whenever the State Forester shall learn thereof he shall notify the owners or persons in control or possession of said land, requesting them to take proper steps for its protection and advising them of means and methods to that end.

Maine—Section 8, Chap. 193, Laws 1909: The said commissioner shall appoint in and for each of said districts so established, a chief forest firewarden, and he shall also appoint within such districts such number of deputy forest firewardens as in his judgment may be required to carry out the provisions of this act, assigning to each of the latter the territory over and within which he shall have jurisdiction. All chief and deputy forest firewardens, so appointed, shall hold office during the pleasure of said commissioner, be sworn to the faithful discharge of their duties by any officer authorized to administer oaths, and a certificate thereof shall be returned to the office of such commissioner.

Forest Protection Fund.

Maine—Chapter 193, Laws 1909: Whereas, the forests situated mainly in the plantations and unorganized townships are one of the chief sources of wealth of the state, and the protection of such forests from destruction by fire is of the greatest importance; to this end it is a paramount duty of this legislature to have funds provided without delay for such protection. Delay in the providing of such funds would expose such forests to danger of destruction by fires, preventable by adequate precautions. In the judgment of the legislature, the facts expressed in the above preamble constitute an emergency, and the measure hereinafter set forth is immediately necessary for the preservation of the public safety. * * *

California has passed the following law which enables the counties to assist in the protection of forests, and all rural districts:

Sec. 4041 (Pol. Code), as amended by Chap. 329, Laws 1913. The boards of supervisors, in their respective counties shall have jurisdiction and power, under such limitations and restrictions as are prescribed by law: * * *

40. * * * To appropriate a sum not exceeding two cents per one hundred dollars of the assessed valuation of their county in any one year, in addition to any sum which may be chargeable to the county for the repayment of money expended by the state for protection against fire in such county, for the purpose of protecting forest, brush and grass lands therein, against fire or other injury, and of aiding the state and federal authorities in forestry work.

Assembly Bill No. 643.

This bill (see Appendix) is reactionary in principles and in opposition to the creation of an efficient forest protective system in California. Its most ardent supporters were those who consistently proclaim that forest fires do little or no damage in this state and advocate the so called "light burning system," a practice condemned by all desirous of protecting the forests from further wanton destruction. They represent special interests exploiting the waning timber supply in a manner detrimental to present and future public welfare. Without a bountiful supply of wood products what shall we do? Are we not cutting annually four times more than our forests produce? And have we not failed to regulate in any manner the use or abuse of our privately owned forests? And who is responsible for the defeat of each legislative measure seeking merely to protect our people and our forests, and our live stock and improvements from needless destruction by forest fires; and all for a sum far less than is the annual toll claimed by uncontrolled fires. These obstructionists promulgate suggestions, advise the public in general and seek endorsements of the unsuspecting relative to "just laws that will tend to perpetuate the forests"—with emphasis on the word "tend." But introduce a forestry measure providing that the state *shall maintain firewardens who shall prevent and suppress forest fires and then what happens?* Why, such a measure is declared "*radical*" and that it would prove "*a constant annoyance, menace and expense to owners of timber lands.*"

In urging the passage of Assembly Bill No. 643 the opposition makes no claim that this measure will accomplish better forest protection than could be had under the provisions of Senate Bill No. 943; nor did they have the audacity to assert either publicly or in published reports that Senate Bill No. 943 did not provide definitely for a system of forest

protection similar in its purpose to those in successful operation in more than twenty states. Those in opposition to a needed state forest policy recognize that the people of California are desirous that her forests shall be protected and, because of this fact, directed their attack against such a policy by supporting a substitute bill, the provisions of which are so drafted as to preclude the establishment of a state fire protective system. Because of the intentional loose, vague and indefinite wording no money could be expended for protection had the bill become a law.

STATE BOARD OF CONTROL.

SACRAMENTO, CALIFORNIA.

November 12, 1914.

MR. G. MORRIS HOMANS, *State Forester*,
Sacramento, California.

DEAR SIR: Relative to the matter of the appropriation of fifty thousand dollars for fire protection that was carried in the general appropriation bill by the last legislature, we wish to say that such item was vetoed by the Governor, as is shown in chapter 680, statutes of 1913, because "There is no proper or adequate method for the administration of this particular item and therefore it should not be inserted in the general appropriation bill."

The matter was discussed with this board at the time that the bill was up for consideration before the Governor, and it was the consensus of opinion that neither the present law nor the proposed law known as Assembly Bill 643, which was finally pocketed by the Governor, was in such form that any effective or proper method of administration of a fire patrol system could be carried out by the state; that if the money was appropriated it could not be used to accomplish any definite result along that line.

Very truly yours,

STATE BOARD OF CONTROL.

By C. L. SEAVEY, *member.*

Furthermore the proposed measure provided for a political board of three members, with no safeguard as to qualifications, interest in forestry, or meetings of the board, which "shall supervise all matters of forest policy and management over which the state has jurisdiction." No definite provision is made for the prevention and suppression of forest fires by the state; for maintaining a state patrol system during the dry season; for the employment of firewardens during the dry season; for the salary and expenses of firewardens; for the construction of lookout stations; or for the purchase of equipment and supplies necessary for the suppression of forest fire. Such a system is impracticable and the Conservation Commission of California is of the same opinion and states, on page 52, report of 1912, that: "Among other systems advocated is that of volunteer fire associations, but from the information at hand we are of the opinion that this plan works well only in theory."

STATE FOREST ORGANIZATION, WITH SPECIAL REFERENCE TO FIRE PROTECTION.*

Rapid Progress of Forestry in the States.

The progress of forestry in the various states has been remarkable. A decade ago but few states gave the subject any serious attention at all. Today no less than twenty-five have active forest departments, the majority of which employ professional state foresters, and twenty have efficient fire protective systems. Five states have attempted to solve the forest taxation problem by enacting legislation which permits forest land to be classified separately and the bulk of the tax placed on the yield—that is, on the timber when cut—while two others have taken steps to provide such legislation. Fourteen have established state forests, with an aggregate area of more than 3,400,000 acres. In 1912, ten states maintained forest tree nurseries that produced nearly 10,000,000 small trees, about half of which were distributed to private owners at cost. Considerable assistance is given private owners through field demonstrations of the proper methods of managing forests and reforesting cut-over and waste lands. Sixty-three forest experiment stations have been established, practically all in the past few years. These activities are given a powerful stimulus by education in forestry conducted by the state forest department and by regularly established institutions of learning, through popular lectures, publications, correspondence, and technical training, supplemented by actual demonstrations in the field. Unquestionably the most intensive work in forestry in this country today is being done by the states.

The importance of these activities to the forest movement in the whole country is very great. Establishment of forest departments means the systematic introduction of forest work in the states. Public attention is being focussed upon forestry. Protection against fire is saving the forest and, together with more equitable taxation, is encouraging the private practice of forestry. Distribution of planting stock is aiding in the renewal of the forest. Public forests will furnish the nucleus of a state timber supply, will serve as demonstrations of the practical application of forest methods, and will bring revenue to the states. In practically every state which has adopted a comprehensive forest policy a strong public sentiment for forestry has started and is constantly increasing.

Protective System.

The chief objects of a protective system are to prevent fire, to discover promptly and locate accurately fires which may start, and to reach them quickly with an adequate force of men. These objects are attained through educating the public to the danger of forest fires, efficient administration of forest fire laws, and cooperation with all protective agencies.

The members of the organization charged with the work go out among the people, warning them of the danger of setting fires and endeavoring to secure their good will, at the same time apprehending wilful and negligent offenders against the law. Practically all members have police powers. It is possible for the organization so to educate the public in the needs and methods of fire prevention that the situation can be handled successfully without the aid of many of the laws dealing with

*Report of Fifth National Conservation Commission.

the setting of fire. At all events, experience has demonstrated that unless an active, efficient organization exists, laws will not be vigorously enforced.

The better organized systems are under the state forester, as ex officio state firewarden, or a similar officer. They consist in the main of district firewardens, lookout watchmen, patrolmen or rangers, foremen of fire crews, and helpers summoned to fight fire. The district wardens, watchmen, and patrolmen constitute the preventive force; the foremen and helpers, the fire-fighting force. This division of the organization into preventive and fighting forces is entirely arbitrary, for often their activities overlap. Some states have the complete organization; some lack the preventive force; and others have no chief firewarden, the system being organized by the individual county or township.

The district firewardens are the chief aids of the state warden, and each is given charge of the protective work in one of a number of fire districts into which the state is divided.

Lookout watchmen are stationed on high points from which fires can readily be discovered. The important lookouts are, as a rule, equipped with an observation cabin or tower, telephone, field glasses, map of the surrounding country, plane table, and alidade. The watchman lives close by, and is constantly at his post during clear days in dangerous seasons, and upon discovering a fire notifies the proper persons. The importance of the lookout station is being appreciated more and more, for the efficient watchman has no equal as a quick discoverer of fires. Some states, by establishing a few additional lookouts, have been enabled to largely reduce the number of patrolmen, thereby increasing the effectiveness of the protection and at the same time decreasing its cost. The lookout station is the primary control of the fire problem, while the patrolling of the lower country forms the secondary control.

Patrolmen are assigned to dangerous areas, such as recently cut-over lands and railroad lines, and often to hunting camps or trails used by fishermen and tourists. Each man has charge of an area of from about 15,000 to 100,000 acres. His duty is to warn persons against setting or leaving fires; to extinguish small fires (each patrolman carries some handy implement, as a collapsible canvas pail); to organize in advance the work of assembling fire-fighting crews on short notice; and to aid wherever possible in the efficient administration of the forest fire laws. He is generally given the work of supervising the disposal of lumbering slash, inspecting spark-arresters and other devices for preventing the escape of fire from engines, inspecting the clearing of inflammable material from railroad rights of way, and similar duties. As a rule, patrolmen are special employees, although in some states the work is handled by the county or township firewardens.

The foremen are engaged chiefly in organizing the fire-fighting work. Each has a crew of helpers, preferably arranged for in advance, and composed of reliable persons who will respond to a summons promptly. Small local forces are mobilized on short notice, and a larger force is available to follow when needed. As a rule, the duties of foremen are assigned to county or township firewardens, who are generally residents and perhaps tax payers of their respective counties or townships on which a portion at least of the cost of fighting fire usually falls. Very naturally, therefore, they are concerned with handling the work in a practical and careful manner. In some states the duties of foreman and patrolman are vested in one officer. Through the foremen and patrolmen provision is made for reaching fires quickly.

FIRE PROTECTIVE SYSTEMS IN THE DIFFERENT STATES.*

Systems Paid Wholly or in Part by the State.

Maine (in the "forestry district").—Chief: Forest commissioner; responsible to governor. (Commissioner authorized to divide the "forestry district" (total area about 9,500,000 acres), including most of the "wild lands," or unorganized towns, of the state into subdistricts. Over twenty such districts so far established, each supervised by a chief forest firewarden with a force of deputy wardens. Deputies given lookout and patrol duties and organization of fire-fighting work. All wardens are appointed by forest commissioner and paid by state when actually employed. State pays all expenses of protection, though fire-fighting expenses have in some cases been paid by timberland owners. Game and fish wardens are ex officio firewardens.

System an exceedingly elastic one; forest commissioner can arrange his sub-districts or mass protective force at vantage points whenever necessary. Many timberland owners and their employees hold appointments as chief or deputy wardens, their services usually being voluntary.

Forty lookout stations built, mostly permanently and equipped with telephone. Boxes of fire-fighting tools placed throughout "forestry district."

State funds for fire protection, raised from tax on lands in "forestry district," aggregate annually about \$70,000, available until expended.

Federal employees authorized by Weeks law stationed at lookouts on the Androscoggin, Kennebec, Penobscot, Union, Machias, Narraguagus, and St. Croix watersheds. Allotment of Federal funds during fire season of 1913, \$8,000. Additional allotment of \$2,000 made for protecting watersheds outside of "forestry district," but not available because state failed to establish, and appropriate funds for, protective system on such watersheds.

Kennebec Valley Protective Association, composed of timberland owners, formed for purpose of supplementing when necessary state's funds available for fighting fire on their holdings.

New Hampshire.—Chief: State forester; under direction of forestry commission. State divided by law into four fire districts, each under district chief with force of lookout watchmen, patrolmen, and town and deputy forest fire wardens. All appointed by the state forester, the wardens upon recommendation of selectmen, mayors, or other citizens. District chiefs, lookout watchmen, and patrolmen paid by the state when actually employed. State and town share equally in pay of wardens, all fire-fighting expenses, and all protective work undertaken by town and approved by state forester. Town pays bills and afterwards collects one half from state, except that in unincorporated towns state pays bills and collects from town.

Section foremen or other railroad employees appointed by state forester deputy forest firewardens.

Twenty-five lookout stations established, chiefly in northern half of state, practically all permanent and equipped with telephone. Most originally constructed and equipped by New Hampshire Timberland

*Report Fifth National Conservation Commission.

Owners' Protective Association, and subsequently purchased by state. Tool supply boxes distributed at vantage points by state and private owners.

Last annual appropriation for fire protection, \$19,900.

Federal (Weeks law) lookout watchmen and patrolmen employed on the watersheds of the Connecticut, Androscoggin, Saco, and Merrimac rivers. Allotment of Federal funds for purpose during fire season of 1913, \$8,000.

Organization reinforced by employees of New Hampshire Timberland Owners' Protective Association.

Vermont.—Chief: State forester; responsible to state board of agriculture and forestry. Under him are lookout watchmen appointed by state; a firewarden for each organized town, appointed by selectmen with his approval; a firewarden for each unorganized town appointed by state forester; and district firewardens, also appointed by him, in both organized and unorganized towns where there is special danger of forest fires and the town warden can not successfully protect the whole town. Duties and privileges of all wardens the same.

Fire-fighting and patrol expenses incurred by the wardens of organized towns paid by town in an amount not to exceed five per cent of town's tax list a year; excess of this amount, if approved by state forester, paid by the state from its general fund. All other expenses of force paid by state. Lookout watchmen stationed on private lands authorized to be paid by state, provided owners establish lookout station and equip it with telephone. (Although this provision might prevent the state from adopting remedial lookout measures, it is based on the principle of encouraging the private owner actively to cooperate with the state in the protection of his property.) Two lookout stations of this kind established; state pays the watchmen. County fish and game wardens required to aid in fire prevention and take charge of extinguishing fires until a firewarden arrives; for which they are paid the same as firewardens.

Funds available for fire protection from last annual appropriation for forestry, about \$2,000.

Federal (Weeks law) patrolmen employed on watersheds of Otter Creek and Hudson and Connecticut rivers. Allotment of Federal funds for purpose during fire season of 1913, \$1,500.

Massachusetts.—Chief: State firewarden under direction of state forester.

Law provides for not to exceed fifteen deputies or aids to state warden, four of whom have been appointed and assigned each to one of four divisions of the state as district forest warden. Under each district warden is force of observers, or lookout watchmen, all appointed and paid by state. In addition an individual town protective system, paid by town and including a town forest warden, whose appointment must be approved by state forester, and who himself appoints deputy wardens. (Although the town wardens are not by law under the direction of the state warden, so far as their duties relate to fire protection, they are

through cooperation practically so in many cases.) Fish and game deputies required to report fires to state warden and to cooperate with him in general.

Lookout system of twenty stations established, with very extensive telephone connection.

Last annual appropriation for fire protection, \$25,000, includes a special appropriation of \$5,000 for reimbursing towns having valuation of \$1,500,000 or less one half the expense of fire-fighting equipment, provided not to exceed \$250 is expended in any one town.

Federal (Weeks law) lookout watchmen employed on watersheds of the Hudson, Housatonic, Connecticut, Thames, Blackstone, and Nashua rivers. Allotment of Federal funds during fire season of 1913, \$3,000.

Rhode Island.—Chief: Commissioner of forestry; responsible to the general assembly. Town and district forest wardens who act under his instructions, appointed by town council. Districts can only be established in towns having 4,000 acres or more of woodland. Wardens liable for patrol duty, subject to approval of council, as well as for fire-fighting. Town and state share equally salaries and expenses of wardens and helpers summoned.

Lookout watchmen, paid jointly by towns and state, appointed by town wardens to serve not to exceed 300 hours a year, provided lookout station has been established by two or more adjoining towns whose woodland aggregates at least 8,000 acres, or by private owners whose woodland in two or more adjoining towns aggregates 4,000 acres. Station must be connected with local telephone system. Not more than two such stations in a county.

State's annual share of expenses can not exceed \$300 in any one town, but town may pay for such additional service for protection as council may authorize.

Last annual appropriation for fire protection, \$1,500.

Connecticut.—Chief: State forester; responsible to board of control, Connecticut agricultural experiment station. Under him are lookout watchmen, patrolmen, and town and district firewardens. Lookout watchmen and patrolmen appointed and paid by state. A firewarden for each town is appointed by selectmen subject to approval of state forester. This warden establishes districts in his town as required by state forester and appoints a district warden over each. Firewardens and helpers summoned are paid one half by state (from its general fund), one quarter by county, and one quarter by town.

Last annual appropriation for fire protection, \$2,500.

Federal (Weeks law) patrolmen employed on watersheds of the Housatonic, Connecticut, and Thomas rivers. Allotment of Federal funds during fire season of 1913, \$1,500.

New York (in Adirondack and Catskill mountain regions).—Chief: Superintendent of forests; under direction of conservation commission. Commission is authorized to divide Adirondack and Catskill mountain regions, including about 7,200,000 acres, into such number of fire districts as may seem necessary. Five districts created, each in charge of district forest ranger, under whom are rangers, and state and special (private) firewardens.

Both classes of rangers appointed and paid by state. district rangers receiving annual salary. State firewardens, corresponding to the town or county wardens in some of other systems, are selected men employed

by other members of force as foremen of fire-fighting crews; they and fire-fighters paid half by state and half by town. Special firewardens designated by the state on request from private owners and paid by latter; have all rights and powers of forest rangers; employed chiefly on lookout or patrol work. Game protectors are required to fight fires and may summon help.

In addition, force of railroad fire inspectors, with authority, under superintendent of forests, over whole state. For this work state is divided into two districts, each in charge of chief inspector with assistant inspectors. Their duties are to inspect railroads and locomotives, as directed by superintendent of forests. Also have powers of game protectors and receive annual salary and expenses.

Forty lookout stations, equipped with telephone, established in Adirondack and Catskill mountains.

Last annual appropriation for fire protection, \$75,000.

Federal (Weeks law) lookout watchmen employed on watersheds of St. Lawrence, Hudson, and Delaware rivers: Federal allotment for fire season of 1913, \$5,000. Additional allotment of \$3,000 made for protecting watersheds outside of Adirondack and Catskill mountain regions. Not available because state failed to establish and appropriate funds for a protective system on such watersheds.

New Jersey.—Chief: State firewarden; responsible through state forester to forest park reservation commission.

Law provides for not to exceed six division firewardens (four appointed and assigned each to one of four fire divisions into which the state has been distributed). Under division wardens are township and district firewardens. Division firewardens appointed and paid by state, each giving his whole time to service and receiving annual salary. Township firewardens appointed one by each town, subject to approval of and removal by forest commission. Each warden divides his town into districts, when and as required to do so by state firewarden, and appoints a district warden for each. He also has power to designate a deputy warden to act in his absence or disability. Forest commission may establish special fire districts including parts of several townships and appoint a firewarden over such district. Township and district firewardens receive nominal yearly fees in lieu of allowance for making reports, postage, posting fire notices, and issuing permits, and also compensation for fire fighting and special services actually rendered. Wardens' salaries and all expenses incurred by wardens and their helpers paid by township, and one half afterwards recovered from state; patrol expenses paid by state alone, provided patrol was directed by state firewarden. In case of serious fire state firewarden or a division warden may summon firewardens and helpers from surrounding townships, of whom those residing in townships not threatened are paid by state.

Under state's constitution no township can be compelled to maintain fire service against its will, that is, make an appropriation for such service. This difficulty met by authorizing a division firewarden to serve as township warden, who may require any one to fight fire at half pay (the state's share).

Last annual appropriation for fire protection, \$15,000.

Federal (Weeks law) lookout watchmen and patrolmen employed on watersheds of Hackensack, Passaic, Delaware, and Raritan rivers.

Allotment of Federal funds for purpose during fire season of 1913, \$2,000.

Pennsylvania.—Chief: Commissioner of forestry; responsible to state department of forestry.

Fire protective force on state forest reservations includes foresters and rangers paid by state and under immediate supervision of Mont Alto Forest Academy. Outside of reservations force includes district firewardens, appointed by commissioner to have charge each over borough or township, and assistant firewardens appointed by district wardens. All wardens liable for patrol duty as required by commissioner, but only during April and May and from September 15th to November 15th. Salaries and expenses of wardens and helpers paid four fifths by state and one fifth by county. Law expressly prohibits payment of any compensation to private owner of his employees for extinguishing fire on his lands.

Department authorized to cooperate with local timber owners' associations and to expend from its general forest fire appropriation an amount equal to that expended by each association for the employment of patrolmen during the danger seasons.

Last annual appropriation for fire protection: Within state forest reservations, \$117,500; outside of reservations (general firewarden system) \$25,000—\$142,500.

Maryland.—Chief: State forester; responsible to state board of forestry. Under him are lookout watchmen, patrolmen, and forest wardens.

Lookout watchmen and patrolmen appointed and paid by state. Forest wardens appointed by state to serve in the different counties, number for each county not to exceed one for every 15,000 acres of woodland. Wardens constitute fire-fighting force, paid one half by state and one half by county, as also are helpers summoned, except that, as in Pennsylvania, a private owner or his employees can not receive pay for extinguishing fire on his lands. Each warden may receive a nominal fee of \$20 a year from state in lieu of allowances for postage, making reports, and posting notices, if approved by board of forestry.

Funds available for fire protection from last annual appropriation for forestry, \$4,000.

Federal (Weeks law) patrolmen employed on watersheds of Youghiogheny and Potomac rivers. Allotment of Federal funds during fire season of 1913, \$2,000.

West Virginia.—Chief: Forest, game, and fish warden; responsible to governor.

Under him are two chief deputy wardens, lookout watchmen, patrolmen, and county deputy wardens, in addition to force of ex officio wardens including sheriffs, deputy sheriffs, constables, and chiefs of police. Fire-fighting expenses borne entirely by counties, except that county can recover from individual or corporation causing fire the amount expended in extinguishing it.

Funds available for fire protection from last annual appropriation for forest, game, and fish protection, \$5,000.

Federal (Weeks law) lookout watchmen and patrolmen employed on watersheds of Potomac, Monongahela, Little Kanawha, and Great Kan-

awha rivers. Allotment of Federal funds during fire season, 1913, \$5,000.

Kentucky.—Chief: State forester; responsible to state board of forestry. Under him are forest wardens appointed and paid by state, whom he may assign to any kind of protective work and on such areas in state as he may select. Fire-fighting expenses paid by state unless counties appropriate funds for purpose. Both state and county have recourse under law for debt against landowners on whose account expenses for fighting fires are incurred.

Funds available for fire protection from last annual appropriation for forestry, \$4,000.

Federal (Weeks law) patrolmen employed on watersheds of Licking, Big Sandy, Kentucky, and Cumberland rivers. Allotment of Federal funds for the purpose during fire season of 1913, \$4,000.

Tennessee.—Chief: State warden of game, fish, and forestry responsible to governor. Under him are special wardens for state at large; one for each county; and deputy wardens. Special and county wardens appointed by state; deputies by county wardens. Wardens may be assigned to such work in fire protection as chief warden considers necessary. All salaries and expenses paid by department of game, fish and forestry.

No appropriation made for this department, but funds available from fines, forfeitures, and prosecutions. About \$1,000 expended some years for fire protection.

Louisiana.—Chief: State forester; responsible to state conservation commission.

No specific officers, such as patrolmen and firewardens, provided for, but state forester can employ and organize such force of protective officers as may in his judgment seem necessary. All salaries and expenses paid by state from conservation fund collected from annual license tax on value of cut of timber. Persons convicted of wilfully or negligently setting fire liable at discretion of court to have cost of extinguishing it assessed as a part of penalty.

Michigan (north of township 20 north).—Chief: State game, fish and forest warden; responsible to governor.

Portion of state lying north of Arenac County divided into ten fire districts, limit allowed by law, each in charge of deputy game, fish, and forest warden. Under these are township supervisors as ex officio firewardens of their respective towns, township firewardens appointed by state warden for each surveyed township in which no supervisor resides (or which has no supervisor), and temporary firewardens appointed also by state warden in localities which in his judgment are inadequately protected. All members of force liable for patrol duty at direction of state warden, and may be massed by him at any special point.

Deputy game, fish, and forest wardens paid annual salaries by state. All firewardens and helpers paid two thirds by township and one third by state, except that no firewarden is paid for more than fifteen days and no helper for more than five days' service a year.

Last annual appropriation for fire protection, \$10,000. In addition,

one third of township's expenditures for fighting fires is reimbursed out of state's general fund.

State force supplemented by that of Northern Michigan Protective Association of Timberland Owners.

Michigan (on the state forests).—Chief: State forester; responsible to public domain commission. Under him is force of lookout watchmen and patrolmen, paid by state from general appropriation for commission.

Wisconsin.—Chief: State forester; responsible to state board of forestry. Under him a head ranger, assistant rangers, lookout watchmen, chairman of town boards as ex officio town firewardens, highway superintendents as ex officio assistant town firewardens, and temporary (county) firewardens.

Rangers and lookout watchmen appointed and paid by state; town and assistant firewardens and helpers they summon paid by town; temporary (county) wardens, appointed by state in emergencies, and helpers they summon, paid one half by state (from its general fund) and one half by county. Firewarden system applies to entire state, and state forester has authority to mass wardens at any special point. Complete force, including rangers and lookout watchmen, organized only in forest reserve region, including about 1,250,000 acres in northern part of state, of which state's holdings approximate 400,000 acres.

Present annual expenditure for fire protection, which comes chiefly out of revenue from forest reserve. about \$35,000.

Federal (Weeks law) lookout watchmen and patrolmen employed on watersheds of Wisconsin and Chippewa rivers. Allotment of Federal funds during fire season of 1913, \$5,000.

Minnesota.—Chief: State forester; responsible to state board of forestry. He is authorized to divide into patrol districts all state and private lands on which forest fires are likely to start, and to appoint a ranger for each. Twenty such districts established. Under each district ranger is force of lookout watchmen and patrolmen, all state appointees and paid by state when actually employed. Some rangers receive annual salaries where there is enough work, particularly slash disposal, to require their continuous services. Expenses for construction of improvements, for fire-fighting, and other protective measures also paid by state, though cost of extinguishing fires is usually paid by owners of land.

State forester may also appoint supervisors, constables, and other town officers firewardens, and towns are authorized to levy annual tax of not more than 5 mills for "fire fund." Twenty-six towns have levied such tax.

Large number of lookout stations, chiefly steel towers from 35 to 60 feet high, established on knolls and hills. None equipped with telephone, but some within practicable reach of one. Telephone facilities over large part of fire zone exceedingly poor. A lookout point largely used is town watertank tower, often as high as 120 feet.

Last annual appropriation for fire protection, \$75,000.

Federal (Weeks law) patrolmen employed on watersheds of Red River of the North, and Mississippi, Rainey, and St. Louis rivers. Federal allotment during 1913, \$10,000.

South Dakota.—Chief: Forest supervisor; responsible to commissioner of school and public lands. Forest supervisor authorized to

employ such assistance as may be necessary to protect state forests. Last annual appropriation for fire protection, \$4,500.

Federal (Weeks law) patrolmen employed on watersheds of Missouri River. Federal allotment, 1913, \$300.

Montana.—Chief: State forester; responsible to state board of land commissioners. Under him are patrolmen employed on state lands and a general fire-fighting force of sheriffs, under-sheriffs, deputy sheriffs, game wardens, and deputy game wardens as ex officio firewardens, and such citizens and National Forest officers as he may appoint as volunteer firewardens. Patrolmen paid by state, and the ex officio wardens by their respective counties when actually employed. Fire-fighting expenses paid by state and may be incurred by any member of force except volunteer wardens, provided that no warden's expenses can exceed \$50 without authority from board of land commissioners.

State, as timberland owner, is member of the Northern Montana Forestry Association, and pays its pro rata share of cost of protecting its own lands. Through cooperative agreement with Federal Government, it protects jointly with Forest Service its land within and adjoining National Forests.

No regular appropriation made for fire protection, but expenses of work paid from land grant income funds in amount of about \$4,000 annually.

Federal (Weeks law) patrolmen employed on watershed of Columbia River. Federal allotment during fire season of 1913, \$3,500.

Idaho.—State board of land commissioners has authority to divide state into such number of fire districts as may in their judgment seem necessary and to appoint, upon application and recommendation of private owners, a firewarden for each district. He in turn appoints as deputy firewardens persons also recommended by owners for lookout patrol, or similar duties. Owners pay all costs of protection and fire-fighting, according to acreage of their holdings, and state as an owner pays its pro rata share.

Each district warden required to cooperate with warden of adjoining district and assume direction over latter in his absence, and to submit an annual report to board of land commissioners.

Although this system apparently lacks a supervising head, one is practically supplied in the North Idaho Forestry Association, composed of four timberland owners' protective associations, which handles all the work after a clearing-house method. The system has certain advantages, chief among which are (1) method of appointment of wardens eliminates political influence, and (2) organization is directly under control of owners, the safety of whose property depends upon the organization's efficiency.

Through cooperative agreement with Federal Government, state protects jointly with Forest Service its land within and adjoining National Forests.

Last annual appropriation for fire protection, \$18,000.

Federal (Weeks law) lookout watchmen and patrolmen employed on watersheds of Snake, Pend O'Reille, and Salmon rivers. Federal allotment during 1913, \$7,000.

Washington.—Chief: State forester and firewarden; responsible to state board of forest commissioners. Under him are county wardens,

one or more to a county having timber which requires protection; forest rangers; and ex officio rangers, including state land cruisers and game wardens approved by state forester, and National forest rangers recommended by their supervisors.

All wardens and forest rangers appointed by forester. Wardens may be employed for full fire season, if necessary, and on any kind of fire protection work. Forest rangers, who include timber cruisers and citizens advantageously located, employed only for fighting fires, and serve practically as foremen of fire crews; they can not incur any liability on behalf of state. In times of emergency forester can mass force at will, and authority of a warden may extend to adjacent counties or to any part of state. All salaries and expenses, including those of helpers summoned, paid two thirds by the state and one third by the county.

This protective system, as actually organized, attends chiefly to fighting fires, while the Washington Forest Fire Association, an organization of timberland owners, handles most of the patrol work.

Last annual appropriation for fire protection, \$37,500.

Federal (Weeks law) lookout watchmen and patrolmen employed on watersheds of Columbia, Chehalis, Cowlitz, Snohomish, Duwamish, Wilapa, Puyallup, Skagit, Stillaguamish, Nooksak, Hoh, Soleduck, and Grays. Allotment of Federal funds during 1913, \$10,000.

Oregon.—Chief: State forester; responsible to state board of forestry.

With the advice of timberland owners or counties desiring to co-operate in fire protection he designates suitable areas as fire districts and appoints a supervising firewarden over each. Twenty-five districts, each an entire county, established. Under supervising wardens are state and county patrolmen, and private and voluntary firewardens. In addition, is force of ex officio firewardens, including county judges and certain state and county officials, required to accept appointment upon request of the state forester, and also National forest officers appointed upon recommendation of supervisors.

All members of organization appointed by state. Salaries and expenses of supervising wardens, state patrolmen, and fire fighters paid two thirds by state and one third by county; county patrolmen by their respective counties; and private fire wardens by owners employing them. Voluntary firewardens receive no remuneration; their duties comprise chiefly issuing brush burning permits, posting fire notices, distributing copies of fire law, and submitting reports on forest fires. Intention is to use the state's fund for preventive measures only and not for meeting fire-fighting expenses, except in extreme emergencies. When fires start, wardens and patrolmen are ordered to see that private owners get an adequate force on the ground as soon as practicable to extinguish them. Although law does not provide for summoning help to fight fires, timberland owners are generally willing to authorize supervising wardens to hire necessary help in case fire starts upon or threatens their holdings.

Private firewardens, although under control of their employers, are, through cooperation with supervising warden, practically subject to his direction. Most of employers of these wardens are members of various county cooperative patrol associations in the state; thus, different lines

of protective work conducted by the state, county, and the private owner are closely interwoven, and further strengthened through co-operation with National Forest officers.

Considerable improvement work has been done in building trails and telephone lines, and fourteen lookout stations with telephone connection have been established.

Funds available for fire protection from last annual appropriation for forestry, \$25,000.

Federal (Weeks law) lookout watchmen and patrolmen employed on watersheds of Columbia, Willamette, Nehalem, Wilson, Siletz, Umpqua, Coos, Rogue, and Klamath rivers. Allotment of Federal funds for purpose during fire season of 1913, \$10,000.

Sixteen private patrol associations have been organized, representing nineteen counties, with a central organization, the Oregon Forest Fire Association. All are members of the Western Forestry and Conservation Association.

Systems Paid by the Township, the County, or Private Owners.*

Delaware.—Chief: State forester; responsible to state board of forestry. Under him are forest wardens, one or more to a county, appointed upon his recommendation by the governor. They and helpers summoned are paid by the county.

North Carolina.—Chief: Forester of the state geological and economic survey. His force may include state forest wardens appointed by governor upon request of owners of so-called state forests, and paid by such owners.

Alabama.—Chief: State game and fish commissioner as secretary of state commission of forestry. Under him are county game and fish wardens as ex officio forest wardens, and sheriffs, deputy sheriffs, constables, marshals, justices of the peace, and other peace officers as ex officio deputy forest wardens. In addition, the governor may, on recommendation of commission of forestry, appoint as deputy forest wardens any persons who may desire to serve without compensation.

Counties pay all expenses, and each is authorized to appropriate not to exceed \$250 a year as salary of its forest warden.

Colorado.—Chief: State forester; responsible to state board of forestry. Sheriffs, under-sheriffs, deputies, and National Forest officers are ex officio firewardens. Sheriffs required to report occurrence of fire to state forester as soon as practicable, and assist in extinguishing it. Game and forest wardens, state land appraisers, and all peace officers have police powers in enforcement of forest fire laws. Counties pay all expenses.

Agreement between the state and the Forest Service provides for co-operation between county firewardens and National Forest officers with a view of securing prompt notification and efficient handling of fires on all forest lands within state. Expenses incurred paid by counties or Forest Service.

California.—Chief: State forester; responsible to state board of forestry. He appoints public spirited citizens as volunteer firewardens, who may receive compensation from counties or private owners; and

*Report Fifth National Conservation Commission.

also as volunteer firewardens, National Forest officers. He is authorized to divide state into fire districts, upon request of county boards of supervisors, counties paying cost of maintaining any district firewardens. In 1913, twenty-two counties expended for fire protection work about \$11,000.

Justices of peace, constables, or road overseers authorized to order out persons liable to poll tax to help extinguish fires.

Persons or corporations causing fires by violations of law liable to state or county in action for debt to full amount of all expenses incurred by state or county in fighting fires.

While state makes no general appropriation for fire protection, a special fund of \$5,000 has been appropriated for cutting fire lanes and fire trails on Angeles National Forest in San Bernardino Mountains. State is authorized to cooperate with Forest Service in this work, and its expenditures can not be in excess of Federal expenditures.

Systems Organized and Paid by the Individual Town or County.*

Maine (outside of "forestry district").—Selectmen of towns are ex officio forest wardens. No town is liable for fire-fighting expenses in an amount to exceed annually two per cent of its tax valuation. Selectmen required to report fires to state forest commissioner on blanks supplied by him.

New York (outside of Adirondack and Catskill Mountain regions).—Town supervisors are ex officio superintendents of fires. They may establish patrols to prevent fires. Money expended by town in fighting fires may be sued for by town and recovered from person causing the fire.

South Carolina.—Members of township boards of assessors call out persons subject to road duty to fight fires, and the time of service is deducted from the time which they are required by law to work on public roads.

Ohio.—Trustees of townships call out persons liable to work on highways to fight fire, and allow them to apply to their poll or road tax the same amount per day allowed for work on the highways.

Indiana.—Township road supervisors call out helpers, who are paid by township.

Michigan (outside of fire districts).—Justices of the peace, township supervisors, and commissioners of highways required to proceed to a fire and order out inhabitants liable to work on highways. Townships pay cost.

Utah.—Sheriffs required to extinguish fires on public domain.

*Report Fifth National Conservation Commission.

CONCLUSIONS AND RECOMMENDATIONS.

From a comprehensive viewpoint of the forestry situation in California the following conclusions are apparent:

(1) That the people of the state do recognize and appreciate the wisdom and necessity of the prevention and suppression of forest fires. This recognition has repeatedly found expression in attempts made to provide unselfishly for state prevention and suppression of forest fires.

(2) That legislative appropriations have been made and money expended in determining how such protection can be best afforded.

(3) That the result of the expenditure thus made was the preparation of a bill providing for a strong state protective system.

(4) That the vital principles of this bill have, so far, succumbed to selfish interests in control of most of the privately owned timberland in California.

(5) That these interests still stand ready to falsely attack worthy measures directed toward public good. And that unsuspecting individuals have unknowingly been misinformed and, upon the strength of their misinformation, have given support to an organized opposition to the very principles which such individuals, undoubtedly at heart, wish to promote.

(6) That persons have perished in forest fires in California.

(7) That the annual loss occasioned by forest fires is enormous.

(8) That most forest fires are preventable, if not in origin, at least in extent.

(9) That it costs far more to let fires get beyond control than it would to put them out.

(10) That a state forest protective system is no innovation.

(11) That under the present law the State Board of Forestry has no appropriation with which to establish a forest protection system, and even with an appropriation, the present laws would not permit its proper expenditure toward an adequate protective policy; and.

(12) That the State of California must provide for an effective protective system, properly financed, if she is to be consistent with good government in protecting her people, her forests, her industries, her ranges and watersheds from further needless destruction by forest fires.

I believe the foregoing analysis in this report contains sufficient proof of the situation to rationally and logically obviate any objection to constructive forest legislation. Your State Forester urges the passage of a forest law, that will permit to be put into effective operation:

(1) The maintenance of a state paid fire patrol system;

(2) The division of the state into fire patrol districts which can do effective work;

(3) The payment of persons called upon to fight fires, payment to be made for the time actually spent in rendering such service;

(4) The purchase of equipment and supplies necessary for the prevention and suppression of forest fires;

(5) The construction of lookout stations and systems of communication;

(6) The entering into agreements with the Federal government, corporations, companies, firms, associations, counties and individuals for

the purpose of preventing and suppressing forest fires and other purposes in harmony with the fundamental principles of forestry;

(7) The compulsory clearing, by the railroad companies, of inflammable debris on their rights of way;

(8) The compulsory disposal of felled trees, shrubs, and brush, by the counties, along highways when constructed and over which the respective counties may have jurisdiction;

(9) The compulsory disposal of a part or all of the slash resulting from logging operations and especially on areas deemed to harbor a fire menace;

(10) The compulsory protection of public resorts from destruction by forest fires;

(11) The maintenance and operation of a state forest nursery;

(12) The acquisition, either by purchase or by delinquent tax provisions or by both, of state forest reserves; and the promotion of highway planting.

FEDERAL VERSUS STATE CONTROL OF FORESTS.

State control of the national forests has been frequently urged during the past three years. It has been supported by members of congress, a portion of the press, and at gatherings throughout the West. Debate on a legislative measure proposing such a transfer developed surprising strength in its favor. It would seem as though the question of whether or not the federal government or the state will ultimately own and administer the forests has been definitely submitted to the people for discussion and a decision. With the controverted doctrine of state's rights as an inducement it is manifest that those promoting this modification of control will welcome an immediate transfer of the remaining public resources to the states, trusting that the decoy will secure the support of unprincipled legislation to further a sinister purpose directed not toward a genuine state control but toward an absolute abolishment of any form of governmental supervision.

National forests have been proclaimed in twenty states. The gross area is approximately 187,000,000 acres supporting a stand of 600,000,000,000 feet of timber and having a value of \$2,000,000,000. These areas are of value chiefly for the production of timber and the protection of water resources. Much of the area is rugged and remote from transportation; consequently, the ultimate revenue will be derived from the water thus conserved and regulated by natural storage. These forests protect the headwaters of every important stream in the western two thirds of the United States. Much of their organization, development, and management is still in the first stage of progression. A definite, stable and far-sighted policy has been formulated to the end that the forests shall contribute to the many all that private ownership has afforded to the few.

It is repeatedly charged that the forests retard the development of the west and that the natural resources are rendered inaccessible to the public; however, this is not true. The first national expression of a sane conservation policy was evidenced when congress conferred upon the president, by the act of 1891, the power to establish forest reserves. Since their transfer to the United States Department of Agriculture a broad, comprehensive, useful policy has been devised and made operative. Land and timber grabbing have been stopped and every public land law has been enforced within the forests. The results accomplished during the formative stage were so overwhelming in demonstrating that natural resources could be conserved for the use of all the people that a similar policy has, by popular consent, been extended to resources other than forests and their by-products.

Over-grazed ranges have been restored to their normal carrying capacity and range warfare is an incident of the past. Cattle and sheep are allotted their respective territories over which they range under an adequate permit system. Large herds are reduced proportionately, as necessity demands, to make room for the new settler and the smaller owner. Systematic experiments are conducted to the end that better and more range may be available. Organized workers are busy exterminating poisonous plants and predatory animals detrimental to the live stock industry.

Prospecting and mining are not only permitted but encouraged in spite of the many assertions to the contrary. The mining laws obtain

within a national forest in the same way and to the same extent as without. One may no longer secure valuable timber and water properties under the guise of a mining claim because the federal officers see to it that the mining laws are complied with, much to the sorrow of citizens in our own state. No restrictions are imposed upon the prospector in his endeavor to discover valuable deposits. The timber and forage on his own claim is reserved for his use and if more is needed it can be had for the asking. New claims may be initiated according to his pleasure and no conditions are imposed in making final proof other than those set forth in the mining laws regarding the unappropriated public domain.

The forest homestead act of June 11, 1906, providing for the settlement on lands within the national forests chiefly valuable for agriculture, was initiated and its passage urged by the Forest Service. Claims for settlement were first examined upon the receipt of an application but in 1909 a more elaborate plan was undertaken. In 1912 a corps of soil experts from the Bureau of Soils, working under a special appropriation of \$25,000 (reduced in conference from \$50,000) began a systematic classification of all agricultural lands within the forests. This one detail of stock taking will require much time and money, but the effort is directed toward building up the West, assuring a proper use of a portion of the nation's property. On June 30, 1912, 1,250,000 acres of agricultural land had been listed for settlement and provided homes for 12,000 actual settlers. This is a concrete result obtained under federal administration and is conservation. On the other hand the United States Forester's report for 1912 shows that 705,000 acres in the Olympic forest in Washington were eliminated in 1900 and 1901 on the ground that the land was chiefly valuable for agriculture and settlement of the country was being retarded. These claims were made by members of congress and private interests. Ten years from the date of elimination it was shown that 523,720 acres had passed to timber speculators because of its value for timber and 178,000 acres were held by two individuals and three companies. One owner held 81,630 acres; only 600 acres of the entire timbered area were under cultivation. This condition is typical of federal abandonment of administrative control.

Forest management is applied to each sale area and working plans are in course of preparation for each forest. Accurate cruises, rate of growth and annual yield studies are secured for each logging unit. The annual or periodic cut is computed from these data determining the sustained yield, an amount that can be harvested for all time to come. Thus far 32,000,000 acres have been covered by detailed methods. In the unimproved and under-stocked virgin forests the annual yield is approximately one per cent of the capital stock. Boundary lines in many forests were hastily drawn of necessity to prevent further land grabbing by persons most skilled and experienced in the operation. The work of final elimination and addition is now well organized and gradually, forest by forest, permanent boundaries are being established. Such an undertaking is most burdensome in a rough country marked with fraudulent surveys. Much work of a similar nature must be done before all of the forests are complete in the essential details. A primary system of trails, telephone lines and lookout stations has been planned looking toward

better fire protection and administration. For the fiscal year 1912 an appropriation of \$500,000 was available for permanent improvements. The total construction under this allotment amounts to 13,435 miles of trail, 11,182 miles of telephone lines and 265 lookout stations.

The transfer of ownership is further urged on the ground that Federal control occasions a loss of local taxes. However, there is no present indication which leads us to believe that such a so-called loss would be eliminated by state supervision. Forest properties, with the exception of two or three eastern states, are still assessed under the general property tax, a system long ago abandoned by every other nation. Inaccurate valuation and general confusion obtain in the administration of the present system. Lands under the control of the Federal government remain untaxed. Transferring the control of public lands to the several states would not directly result in a revenue from taxation and could yield such an income indirectly in no other way than by becoming private property. Much of the valuable forest land is inaccessible and the value upon which to base a tax would involve a difficult problem. Under the present Federal ownership the states will eventually receive from sales of timber within their boundaries an amount in excess of any that would probably be received from taxes. Fully 5,600 timber sales are made annually on the national forests most of which are in relatively small tracts and generally for local consumption. Ten per cent of the gross receipts from these forests is expended in building roads and trails necessary to the best development of the region. Those who permit themselves to believe that a loss is occasioned the state by virtue of the land paying no taxes will do well to consider road building, other improvements and protective work a very material self-imposed tax. In California this 10 per cent amounted in 1912 to \$24,821.13; aside from this amount 25 per cent of the gross receipts is given to the states in the form of county road and school funds. This in our state amounted in 1912 to \$62,052.82. The total amount received by the forested states from the forests in 1912 was \$713,877.59. When it becomes possible to cut from the public forests an amount equivalent to their total annual growth, which is about six billion feet, the gross returns at the present stumpage rates will be \$15,000,000. Under the present apportionment \$5,275,000 would be given directly to the states. In order to provide for this, and working toward a maximum utilization of natural production, it is necessary to employ methods of protection and management far too expensive for the states to practice. The forested states are today enjoying a greater profit from their public timbered areas than they could possibly realize by endeavoring to exercise a method of control nearly as efficient as the present supervision of the Federal government. And there is reason to believe that the state would be deficient in management and protection if, at this time, she assumed the responsibility of entire direction.

In California the value of the timber under Federal supervision is \$228,000,000; the value of timber privately owned is \$500,000,000. The latter represents generally large and valuable tracts frequently held for speculation. Lumbermen are practicing logging; but economic forest management receives little or no attention. The annual cut of forest products exceeds the annual yield and future crops are left largely to chance. Undoubtedly such a practice is equivalent to wanton destruc-

tion. However, there are no state regulations governing the cutting on private lands.

California, with other states, has failed to retain possession of her public lands and has neglected to initiate a conservative policy looking toward the perpetuation of her own resources. No definite tax reforms have been urged; we are still to develop an adequate and efficient protective system; and the state maintains no forest experimental stations.

The acquisition of state forests by purchase and delinquent taxation has not been seriously urged by a representative number and, as yet, there is an unawakened public appreciation of the need of a broad-minded, stable and definite state forest policy. Forestry has had a pervading effect in practically every state; however, it is safe to analyze carefully the motive from which expressions emanate. Political interests have undoubtedly succeeded in gaining control by resorting to ingenious declarations not prompted by noble and unselfish impulse. Furthermore, we have reached the stage when pleasing utterances of a powerful few should not purchase command but must give way to true and fundamental expressions of common welfare.

In California the first public expression of the need of a definite forest policy was the passage of an act in March, 1885, establishing a state board of forestry. At first the board acted in the capacity of a commission of inquiry with emphasized educational functions. By an amendment police powers were conferred in 1887 for the purpose of making arrests for any violation of any law applying to forest and brush land within the state or prohibiting the destruction thereof with an appropriation of \$30,000 for the following two years. Two experimental stations were maintained, and the board published three valuable reports on the forest conditions and the forest trees of the state. Little could be done in efficient protective work and, suffering at the hands of reckless politicians, the act was repealed in 1893. Possession and supervision of the experimental stations passed over to the State University and the board of forestry was abolished. In 1905 another act revived the State Board of Forestry, making provision for its appointment, the appointment of a state forester, and designating the authorities of both. Since that time the board has accomplished effective results considering the fact that the work has been carried on in the face of absurdly inadequate appropriation and legislation.

The primary purpose of control is protection and conservative utilization. This can not be accomplished without a clearly defined and well organized forest policy. The Federal government has developed at great expense, and against many adverse conditions, a system far more efficient than the individual states could expect to equal. There is no ground for maintaining that the states with their numerous partisan whims and political changes could develop and execute a plan of forest and public land supervision when the attainment of such control has been a struggle under national endeavor. No transfer should be proposed until it can be shown that the act will result in an increase in efficiency, and undoubtedly this can not now be shown. When states shall have accomplished capable and adequate governing control over what they have, and it can be shown that the administration of the work can be free from political influences, it will be consistent to assume that they will then be truly desirous of undertaking entire supervision, and such a desire will find ready expression in wholesome and unanimous support of a stable and progressive forest policy.

CUT-OVER LAND STUDY.*

During the summer of 1912 a beginning was made in the work of investigating the timber holdings in California, both timbered and cut-over areas, of every lumber company owning 5,000 acres or more. It is generally known that the lumber manufacturers in California leave their cut-over areas in a condition which renders a second crop doubtful by virtue of the great fire hazard allowed to exist. There are a few exceptions to this general statement. Furthermore, the study did not include the redwood operations; so nothing in this chapter shall be construed to apply to manufacturers of California redwood. Unfortunately, however, there is little cause to believe that a similar study made in the redwood belt would not show equally unfavorable features.

The data secured in 1912 was published in the Fourth Biennial Report of the State Forester. During the summer of 1913 the work was completed and the data compiled. Descriptions of lumber companies not published in the 1912 report are found herein, and the following summary includes every company visited during the summers of 1912 and 1913.

Summary.

The holdings of twenty lumber companies were examined, full attention being given in each case, to the following:

1. The general aspect of the locality, giving name of company and location of holdings.
2. Forest type—showing dominant merchantable species and other species growing in association.
3. Fire—an outline of the fire situation in the past and the present conditions with regard to forest fires.
4. Grazing—whether the areas were suitable for grazing and, if so, the possible effect of stock on forest reproduction.
5. Reproduction—a careful survey of the quality and quantity of natural reproduction and the agencies affecting the same.
6. Forest and ground cover—the low forest vegetation, such as small subordinate trees and shrubs, and the condition of the surface soil with regard to its being a suitable seed bed for the germination of forest tree seeds.
7. Logging—an outline of methods employed, species cut and transportation facilities.
8. Waste in logging; and
9. Second growth.

The twenty holdings represent a total of 929,407 acres, of which 442,258 acres are cut over and 487,149 acres are yet to be logged.

The study includes practically every lumber company now operating in California, exclusive of the redwoods, and owning a total of 5,000 acres or more.

Four companies maintain a system of patrol, but in no case is the system adequate.

Two companies maintain lookout stations.

Two companies burn their slash each year.

*The illustrations appearing under this caption are presented to represent typical conditions, and they do not pertain to the individual company under whose name they respectively appear.

Five companies dispose of much of their slash by other means than burning—it is made into cordwood.

Eleven companies respond promptly to all fire calls in their holdings.

Thirteen companies, owning 256,840 acres of cut-over land, have a portion or all of the land in such condition that the slash and debris thereon constitute a positive fire menace.

Nine companies do practically nothing to protect their holdings from fire.

BOCA MILL AND LUMBER COMPANY.

In General.

The timber holdings owned by the Boca Mill and Lumber Company are located in townships 18 and 19 north, ranges 16 and 17 east, Mt. Diablo meridian, Nevada County. Their holdings comprise an area of 16,120 acres. The Union Ice Company, which is composed of practically the same personnel as the Boca Mill and Lumber Company, also owns 2,720 acres in this locality. Both of these holdings were logged 20 or 25 years ago, so the area can be classed as second growth rather than virgin timber. Since only the best grades were cut in the first operations, a great amount of marketable timber remains. The company is not interested in its timber holdings from an operation point of view. They merely contract or lease small and suitable areas for logging. No attention is being paid to whether or not the area is being too closely cut or not; no diameter cutting limit is specified in the contracts; and, in general, nothing is being done along forestry lines. The entire tract is left to take care of itself.

At present, the suitable localities are being cut for wood only. No logging has been done since the Porter-Breuner company ceased operations in 1909. The elevation ranges from 5,500 to 6,000 feet above sea level. For the most part, the slopes are gentle.

When our forests are gone one of our greatest industries, the manufacture of lumber, will be a thing of the past. To prevent such a catastrophe, we must look well toward the protection and proper use of our remaining forest resources.

Type.

The pure yellow pine type prevails throughout the holdings. Next in prominence is the white fir (*Abies concolor*) which occurs in association with the yellow pine along the ravines and flats. The stand was and is, open and park-like, and the trees are short with considerable taper. The virgin stand averaged about 12,000 to 16,000 board feet per acre.

Fire.

No serious fires have occurred in this locality. Slash was not disposed of and was left in the customary haphazard way. At present nothing remains of this slash. That which was located near Boca has been removed for fuel, and the rest has, for the most part, decayed. In the wood cutting operation the slash is left as fallen. The company should insist on piling and burning this slash and so protect the young growth.

The Boca Mill and Lumber Company does not maintain a fire protective system. The Boca and Loyaltan Railroad goes through a portion of this company's holdings. The company could easily and very cheaply patrol this area. There are plenty of roads and the country is very accessible.

Forest Cover.

The forest cover found on the holdings of this company comprise the following species: Sagebrush, manzanita, greasewood, deer brush, gooseberry, mountain mahogany, buckthorn, cottonwood, willow and squaw carpet.

This area is extremely dry, generally speaking, and sagebrush is found in great quantities over the entire holdings.

Ground Cover.

The ground cover proper on the hills and slopes is very thin throughout and consists of a very thin layer of needles, duff, grasses and squaw carpet. Nearly all of the area is covered with rocks, so the ground cover, such as it is, is found in patches.

Second Growth and Reproduction.

The species comprising the second growth represent in detail the original stand, namely, yellow pine and white fir. It would be safe to assume that 40 per cent of the area cut by wood contractors is cut too close. Generally speaking, the reproduction is good.

Logging.

With the exception of small contractors, this company's holdings have not been logged for 20 or 25 years. The old Boca Mill Company logged under a selection system, removing only the largest and best trees. A good pole stand with considerable second growth, therefore, remains. A second cutting has been made during the last seven years by small contractors. In 1909 the Porter-Breuner Company completed a small cut. All merchantable species and sizes are now being removed by the contractors.

Conclusions.

The Boca Mill and Lumber Company is not practicing forestry on its holdings. The cuttings were and are made without regard to the future yield. No cutting diameter limit has been established and anything merchantable is taken. The diameter limit, such as it is, on the recent wood cuttings, is too small to leave a sufficient number of seed trees. The second crop is left, largely to chance.

The present and more recent cuttings have left the debris scattered about in a dangerous condition. A fire would destroy whatever chances the area had of reproducing itself and for that reason, all slash should be piled away from the reproduction and burned each year in the proper season.

In logging, the timber is being closely utilized. Stumps are fairly low, and tops are taken to as small a diameter as possible. After lumbering the slash is cut into wood. In the wood cutting operations, even smaller stumps and tops are left in the woods, so close utilization exists throughout.

CALIFORNIA DOOR COMPANY.

In General.

The California Door Company owns 24,931 acres of forest land in southern El Dorado County. Of this, approximately 4,000 acres have already been cut over. The entire tract is located on the watershed of the Cosumnes River at an elevation of from 4,000 to 5,000 feet. The slopes vary from gentle to moderately steep.

The sawmill, which cuts about 60,000 board feet per day, is located at Caldor, thirty miles southeast of Placerville. The company maintains a lumber yard at Diamond Springs, the western terminus of the Diamond and Caldor Railroad, and the door factory is located in Oakland.

Type.

The sugar pine-yellow pine type, prevails throughout most of this region. White fir and incense cedar are found entering into the type at all elevations. Jeffrey pine enters into the mixture at the higher elevations, and scattered Douglas firs were noted along the streams at the lower altitudes. The stand as a whole is very scattered. In some areas, it is exceptionally dense, and of excellent quality. In these areas, the timber will average over 35,000 board feet per acre. But on most of the slopes and summits the trees, although of good quality, are scattered, often opening out into rather large areas of dense chaparral or bear clover. Chaparral is found in abundance throughout the virgin stand, even in the areas where the tree growth is most dense.

Fire.

The California Door Company has adopted a most admirable system of protection. The tract owned by this company is surrounded by national forest land, and the company has cooperated with the forest service in a mutual effort to keep out fire.

Three lookout stations are located on high peaks on or near this tract. The forest service selects and hires the lookouts, and the lumber company pays the salary of one of them. These stations command an

excellent view of the entire holdings, and are connected by telephone with the offices at Caldor. Whenever a fire starts the company is immediately notified, and a force of men is sent at once to extinguish it. If the fire assumes serious proportions, the entire camp is sent out. All the donkey engines and locomotives are equipped with spark-arresters. The donkey engines and logging locomotives burn wood, but the locomotives on the railroad between Caldor and Diamond Springs burn oil. During logging operations the dead snags, especially those near the engines, are cut down to reduce the fire danger to a minimum.

As a result of this excellent system, there have been no serious fires since its adoption, in 1911. In 1910 one fire destroyed over \$40,000 worth of virgin timber. Undoubtedly, one of the reasons why the company is so careful now, is a desire to avoid a repetition of such fires as this. The entire area has been swept by fire in earlier days. Nearly every standing tree bears a fire scar at the butt. These early fires were probably the cause of the present stand being scattering and in patches.

In spite of all precautions a few small fires occur on the cut-over land every summer. These are set by sparks from the donkey engines; but are always extinguished before doing any great damage. It seems impossible to prevent all the sparks from escaping, and in the dry seasons, small sparks are almost certain to start fire. As the company does not burn its slash, the debris from logging increases the possibility of fires starting from these sparks. Owing to the scattered nature of most of the stand, the menace from the slash is not so great as in many other localities; but, nevertheless, it should be piled and burned each year. As long as the present protective system is maintained, the second growth is in no great danger from the slashings. But after the entire tract has been logged, and the company ceases operations in this locality, the menace will still be present, at least in part, and there will be no logging crew to turn out for fires. Then a fire on the cut-over land might easily do a vast amount of damage. For this reason, it is advisable to pile and burn all slashings.

Forest Cover.

The forest cover found on the holdings of this company comprises the following species: Cherry, manzanita, buckthorn, oak, bear clover, lilac, gooseberry, rose, birchbrush, and lupin. Cherry, manzanita and buckthorn were found to some extent throughout most of the tract. In some parts of the cut-over land, and in openings in the virgin stand, they are making a very dense growth, and are apparently retarding reproduction to quite an extent. Oak was found making a scattered growth throughout both the virgin stand and the cut-over areas. Bear clover has taken possession of a large area of the cut-over land. It is also found in openings in the virgin timber. Reproduction was often found coming up through the patches of bear clover.

Ground Cover.

The ground cover is fairly good in both the virgin and the cut-over areas. A large part of the ground cover is destroyed by logging operations. However, owing to the fact that there has been practically no fire since logging, sufficient ground cover has been left to make a fairly good seed bed.

Logging.

Sugar and yellow pine form practically the entire cut made by this company. White fir and cedar are cut only when in the way, or for use as chute poles or ties for the logging railroad. An approximate minimum diameter limit of eighteen inches has been established for all species cut. The company does not believe that it pays to cut the smaller trees for their purposes, and they figure on the possibilities of a second crop. With this system numerous vigorous seed trees, especially of white fir and cedar, are left to reseed the area. Owing to the scattered nature of the virgin stand, it might be desirable to leave a few more seed trees of yellow and sugar pine, particularly of the latter species. A great deal of damage, however, is done to the young growth during logging operations. Very little attention is paid to the reproduction, and many trees are felled in and skidded over thick clumps of young seedlings, destroying a large percentage of them.

The logging is done entirely with donkey engines. The logs are hauled in 32 foot lengths down dry chutes to the landings. From here they are hauled to the pond at Caldor over the company's narrow gauge railroad. Before entering the mill, the logs are bucked into 16 foot lengths. The rough lumber is hauled over the Diamond and Caldor Railroad, a narrow gauge, to the yards at Diamond Springs. The door factory is located in Oakland.

In spite of the damage done to young growth during logging operations, the numerous seed trees left insure a future crop that should equal in quantity the present stand. However, owing to the fact that white fir and incense cedar are seldom cut, these inferior species will probably form a comparatively large per cent of the future stand.

Waste in Logging.

The chief wastes in logging noted were in unused tops and chute poles. The tops are used down to a diameter of from 12 to 18 inches, but in many cases another good sixteen foot log could be taken out. The chute poles, after logging is finished, are left in the woods to rot. Many of them could be utilized for railroad ties or firewood.

The waste was considerably greater on the old cut-over land. Tops were not used to as small diameters and many long sections of merchantable size were left as waste in the woods.

Second Growth.

The species comprising most of the second growth are yellow pine, sugar pine, white fir and incense cedar. Quite a bit of chaparral has come up in the old cuttings, and in patches it is dense enough to keep out practically all reproduction. In other areas, the reproduction is exceptionally dense, of which a large per cent is yellow pine. The second crop, like the virgin timber, will undoubtedly be scattered and in patches.

On the oldest cuttings, made in 1905, the slashings are still somewhat of a menace to the second growth. But they are decaying rapidly, and if fire is kept out for a few years more, this menace will cease to exist. There have been no fires of any consequence on this area since logging, and, as a result, the reproduction is exceptionally good. Numerous seed trees were left on the area cut in 1908. Like the original stand,

the second growth here occurs chiefly in patches. Bear clover has taken absolute possession of some areas. There have been no fires on this area since logging; consequently the ground cover is in good shape to act as a seed bed. If fire is kept out, a scattered stand, that will probably equal the original crop, should eventually mature.

Like the older cuttings, numerous seed trees of fir and cedar were left on the recently cut-over land. Yellow and sugar pine were cut down to an approximate diameter limit of 18 inches, and seed trees of these species are decidedly in the minority. But this diameter limit leaves a sufficient number of standing trees to supply the area with quantities of seed. As is nearly always the case where logging is done with donkey engines, over 50 per cent of the young growth in the virgin stand was destroyed.

Conclusions.

The California Door Company is not practicing conservative forestry, and the annual cut is made without regard to the yield. An approximate diameter limit of 18 inches has been established for sugar and yellow pine. Fir and cedar are not removed except when in the way, or when needed for ties or log chutes. This practice offers some assurance for natural reproduction, but inferior species are apt to form the major part of the future stand.

A good fire protective system has been established. The company works in cooperation with the Forest Service. Lookout stations, commanding a good view of the entire tract, have been built and connected by telephone, with the company offices at Caldor. Woods foremen and train crews are instructed to respond promptly to fire calls, and every fire is extinguished as soon as possible after its discovery.

No disposal is made of the slash. It should be piled away from the reproduction and burned every fall after the first rains.

CROWN-COLUMBIA PAPER COMPANY.

In General.

The Crown-Columbia Paper Company, successor to the Floriston Pulp and Paper Company, owns approximately 32,380 acres of timberland. Practically the entire area has been cut over, but since only the white fir and red fir have been removed, the acreage may still be regarded as timberland. With but few exceptions this tract has a good stand of Jeffrey pine. Of the 32,380 acres, 20,200 acres are in Placer County, California, and 12,180 acres in the state of Nevada. In addition, the company has contracted to cut the fir from 2,120 acres belonging to the Truckee Lumber Company in Placer County. A paper mill is located at Floriston.

The elevation of the company's holdings ranges from 5,319 to 9,000 feet. The entire tract is very mountainous and rough, cut by steep walled and narrow canyons. This company's operations are exceedingly interesting; only the white and red fir, usually considered of no value by lumbermen, are cut.

Type.

(Duffy's Camp.) The white fir, Jeffrey pine, red fir type, prevails throughout the region. The following species are also found in scattered groups: California juniper, lodge pole pine, western white pine and white bark pine.

The stand as a whole is very thick, and the trees are short with considerable taper. The stand will average from 18,000 to 30,000

Power line and telephone poles afford a market for young trees. Such a market will enable many timber land owners to grow timber on comparatively short rotations. When all trees are being cut and the land is to be cleared, this demand affords opportunity for complete utilization.

board feet per acre. The Jeffrey pine above will average 7,000 to 10,000 feet per acre.

(Brown's Camp.) The type of forest in this region consists of red fir and white fir. Little or no juniper is found. Lodgepole pine is found in considerable quantities and is of good quality. Some of the best is used for fuel. Silver-bark pine and western white pine also grow in this locality.

Fire.

But one serious fire has occurred in this region. One or two small ones have been set through carelessness in the vicinity of Duffy's Camp but they were extinguished before any damage was done. The company had its largest fire in 1912, when approximately 40 acres burned. This fire was started through the carelessness of one of the employees. As a result, a good stand of lodgepole pine, white fir, silver-bark pine, white pine, and all growth was destroyed. Nothing except charred stumps remains and greasewood is rapidly taking possession of the area.

The company maintains a fairly good fire protective system on all its holdings, particularly where the camps are located. Many hundreds of cords of wood are scattered throughout its present operations, and this material warrants special protection. To avoid fire, one mounted patrolman is maintained at each camp. It is his duty to patrol the area each day and to have fire fighting tools cached in suitable and conspicuous localities. At Duffy's camp, the company cooperates with the United States Forest Service in fire prevention and protection by paying a portion of the ranger's salary. He acts as patrolman at this camp. The Duffy camp area is too large for one man to cover in a thorough manner and one more man should be added.

The debris, consisting of unlopped tops and branches, is dry and constitutes a fire menace. Strong winds are frequent in this region and fire started on such an occasion would prove very disastrous.

There is not, however, much danger from fire, since no locomotives or logging donkeys are used. Debris does not occur in such vast quantities as in the cases of logging and lumbering operations, but the type of forest is such in this region that white fir constitutes nearly 50 per cent of the stand, and considerable slash is left.

The wood supply at Duffy's camp is about exhausted and the camp will soon move to Soda Springs station. Hence, this region will be left in an unprotected state.

The same condition exists at Brown's camp near Spruce. A mounted patrolman is also maintained here and his duties are similar to those of the patrolman at Duffy's Camp.

Forest Cover.

(Duffy's Camp.) The forest cover found in the Duffy Camp region, comprise the following species: manzanita, mountain mahogany, greasewood, buckthorn, sagebrush, willow, deer brush, wild rose, cherry, gooseberry, cottonwood, alder, and squaw carpet. Manzanita, mahogany, and greasewood were the most noticeable, and were found in all openings, usually on slopes not occupied by merchantable forest.

Ground Cover.

The ground cover is fairly good over the entire area. It consists mostly of a layer of needles and good humus, and serves as a very good germination bed. The soil is of a dark sandy loam in the choice localities and a yellowish decomposed granite in the poorer situations. Squaw carpet, wild oats, timothy and meadow or spear grass grow abundantly. Because of this good growth many sheep are grazed on the area.

Grazing.

Many sheep belonging to Mr. Wheeler of Reno, are grazed in the vicinity of Duffy's camp every season. Sheep alone are permitted and they do little damage to forest growth. The company follows more or less the United States Forest Service policy. The sheep men favor the policy of not overstocking the area, since by not doing so they possess long term leases. Consequently, the same sheepmen occupy the region each season.

The damage from sheep usually consists in trampling, rather than eating the young growth. No damage to speak of from this cause was noticed.

Cutting.

Only the white and red fir are being cut. This is due to the fact that only these species are of use in the manufacture of paper. As a result, a very good stand of Jeffrey and lodgepole pine is left. Lodgepole pine is cut in small quantities and used for fuel.

All trees are cut to a diameter of 12 inches and each tree is cut to a 4 or 6 inch top diameter. The usual operation consists in felling the trees, bucking them into 4 foot lengths, splitting these lengths and then leaving the wood on the ground to season for 6 or 8 months.

All wood is cut during the winter months, beginning with October. This system of winter cutting accounts for the tall stumps which may be seen over the cutting area. In many cases the stumps are six feet in height. This seems to be the universal practice and is done for the reason that wood must be seasoned and dried before being used. Many cords of wood are thus left in the woods in the form of stumps. It seems feasible that the company should cut its stumps shorter, say to a two foot height at least, but in the winter the snow prevents this.

Hauling.

The company does its own cutting but contracts its hauling. The price which contractors receive is in the neighborhood of \$2 per cord.

In the summer, or as soon as the weather will permit, the wood when thoroughly seasoned and dried is packed on mules, or by horse teams and wagons to the flume, in which it is transported to the paper mill at Floriston.

The system of handling wood near the Soda Springs stations is somewhat different. The wood is hauled 2 or 3 miles by five and six horse teams and a 3-ton auto truck to Spruce. Here it is transferred to wood cars on the Southern Pacific railroad and shipped to Floriston. The company thus has two sources of wood supply, Duffy's Camp near Floriston, and Brown's Camp near Spruce, and Soda Springs station. These camps supply enough wood during the season to keep the mill running winter and summer.

Waste.

In general, the chief waste is in the high stump. This condition is found at both the contractors' camps, but principally at Brown's Camp, near Spruce. The average height of stumps on the area is about 4.3 feet. This should be lowered to at least 2 feet. It could be accomplished if the wood were cut in the summer months instead of the winter.

The accompanying table represents one quarter acre of the 1912 cuttings; 38 trees were cut from this plot. If the stumps had been cut to a height of 2 feet, the volume saved on this one quarter acre would have been as follows. This table shows also the species comprising the stand:

Stump	Species	Diameter at top (inches)	Total height (feet)	Height above 2 foot	Volume saved, cubic feet
1	Red fir -----	7	4.0	2.0	.53
2	Red fir -----	31	3.7	1.7	8.91
3	Red fir -----	24	5.0	3.0	9.8
4	Lodgepole pine -----	19	5.0	3.0	5.91
5	Red fir -----	12	5.5	3.5	2.75
6	Red fir -----	18	4.6	2.6	4.6
7	Red fir -----	20	3.8	1.8	3.92
8	Red fir -----	18	4.0	2.0	3.53
9	White fir -----	21	4.3	2.3	5.53
10	Red fir -----	34	3.6	1.6	10.08
11	Red fir -----	24	3.0	1.0	3.142
12	Red fir -----	17	3.0	1.0	1.576
13	Red fir -----	16	3.5	1.5	2.09
14	Red fir -----	26	3.3	1.3	4.8
15	White fir -----	17	2.5	.5	.788
16	White fir -----	15	5.1	3.1	3.86
17	White pine -----	21	5.5	3.5	8.44
18	Red fir -----	12	4.8	2.8	2.19
19	Lodgepole -----	18	4.3	2.3	4.07
20	Red fir -----	13	4.7	2.7	2.48
21	Red fir -----	12	5.1	3.1	2.43
22	Red fir -----	14	3.7	1.7	1.82
23	Red fir -----	13	4.2	2.2	2.03
24	White pine -----	12	4.8	2.8	2.19
25	Red fir -----	14	5.7	3.7	3.95
26	White pine -----	11	4.2	2.2	2.35
27	Red fir -----	11	4.1	2.1	2.21
28	Lodgepole -----	8	5.0	3.0	1.01
29	Red fir -----	10	4.5	2.5	1.36
30	Red fir -----	13	5.2	3.2	2.95
31	Red fir -----	21	4.8	2.8	8.79
32	Red fir -----	28	4.5	2.5	10.7
33	White fir -----	32	5.0	3.0	16.75
34	White fir -----	12	4.5	2.5	1.96
35	White fir -----	14	4.1	2.1	2.21
36	Red fir -----	18	4.0	2.0	3.53
37	Red fir -----	30	3.5	1.5	7.36
38	Red fir -----	24	3.0	1.0	3.14

Thus 165.75 cubic feet or 1.29 cords of wood would have been saved on $\frac{1}{4}$ acre, by cutting to this lower height of 2 feet. So on one acre, the total unnecessary waste from high stumps is 663 cubic feet or 5.16 cords. No other waste was noticed. The tops are being taken to a small diameter so there is no unnecessary waste in unused tops.

Disposal of Slash.

No disposition is made of the slash. On the entire holdings it constitutes a serious menace to reproduction and standing timber. This debris is very dry and when fire comes in it will destroy all. The question of slash disposal should be an important factor in the company's operations. Much standing timber remains and should be protected from fire. If the slash branches were piled with a little more care and then burned after the first rains, the serious fire danger would be removed.

Reproduction and Second Growth.

Only the fir is removed, so reproduction is practically left in its original condition. The trees are merely felled and cut into wood so no reproduction is damaged by dragging logs. All species of reproduction may be found in abundance. The white fir and red fir, which are being removed, are reproducing themselves well. In fact, white fir reproduction is very thick and should be thinned out in many localities.

The next crop will be similar in every respect to the original stand. The area, however, must be protected from fire after cutting operations cease; otherwise there can be little assurance of a second crop.

Conclusions.

The Crown-Columbia Paper Company in following its present cutting policy is practicing forestry to a certain degree, because a cutting diameter has been established sufficient enough to not deplete the area of seed trees. Considerable timber remains and it is the intention of the company to cut this at some future time. The company is very careful with fire and a fairly good fire protection system is in force. Mounted patrolmen ride continually during the dry season. Patrolmen should be maintained on the tract after operations cease as well as at present, for much good merchantable timber remains.

The company is not practicing forestry when it allows its debris to remain in the forest after cutting. All debris should be piled and burned.

The stumps are cut too high, and it seems feasible and practicable for the company to so manage its operations as to cut its wood during the summer months when there is no deep snow.

DANAHER LUMBER COMPANY.

In General.

The Danaher Lumber Company, formerly the El Dorado Lumber Company, owns 17,034 acres of forest land in northern El Dorado County. Of this, approximately 8,000 acres have already been cut over. The planing mill and box factory are located at Camino, and the rough lumber is hauled in from the sawmill at Pino Grande, a distance of twenty miles, by a narrow gauge railroad. The entire tract is located on the drainage basin of the American River. For the most part the slopes are gentle, the elevation ranging from 4,000 to 5,000 feet. The soil consists mostly of a deep, rich granite loam.

Type.

The yellow pine-sugar pine type prevails throughout most of the holdings, but Douglas fir, white fir and incense cedar are present in sufficient quantities to form a large per cent of the total stand. The stand as a whole is rather dense, and the trees attain a large diameter and height. Chaparral is abundant throughout the entire stand, and in some sections, the above mentioned type is broken by patches of pure chaparral. In other places the stand gives way to patches of bear clover, so dense in its growth that tree reproduction is materially reduced.

Fire.

The Danaher Lumber Company cooperates with the United States Forest Service in protecting this tract from fire. Three lookout stations have been erected on the peaks surrounding the holdings. The forest service selects and hires the men, but the lumber company pays a part of their salary. In addition to this, the company keeps one track walker whose duty it is to patrol the logging railroad. No serious fires have occurred in recent years in the virgin timber. But numerous fires do occur every year on the cut-over land. The reason for this is that the donkey engines are not equipped with spark-arresters. Usually these fires are extinguished before they are able to do much damage. Approximately forty acres of recently cut-over land burned over in 1913, and hardly a tree has been left alive on the portion swept by fire. Much of the old cut-over land has been burned over several times since logging.

The locomotives, although equipped with spark-arresters, have been the cause of numerous small fires along the right of way. The track walker and the train crew are always on the lookout for fires and generally manage to extinguish them before they do any great damage. Such a blaze destroyed one of the railroad bridges on the night of August 14, 1913, and forced the entire plant to shut down for several days, until a new trestle could be built.

Forest Cover.

The forest cover on the tract consists of the following species: Buckthorn, manzanita, lilac, bear clover, dogwood, oak, chinquapin, rose, gooseberry, alder, azalea and hazelnut. Buckthorn, chinquapin and manzanita form a dense growth in the old cut-over land and in many openings in the virgin forest. They are also found to some extent throughout most of the virgin timber. Bear clover has taken possession of much of the cut-over land. Oak is found scattered throughout both the cut-over land and the virgin timber. The alders, azaleas, and hazelnuts usually abound in the wet situations near the streams, where they often make a very dense growth. Chaparral has, to some extent, taken possession of all of the cut-over land. In many localities, it undoubtedly retards reproduction.

Ground Cover.

The ground cover is fairly good throughout the virgin stand and on most of the cut-over areas. A large part of the ground cover found in the virgin timber is destroyed during logging operations; but, except in the burned areas, enough remains to form a fair seed bed. In places where fire has run, the ground cover has been entirely destroyed.

The waste permitted during some logging operations is enormous, wrong and unnecessary. Had the owner invested capital for producing the material such waste would be an economic impossibility. If the forests belong to the people—upon what grounds shall we sanction these wasteful methods?

Logging.

Yellow pine, sugar pine, Douglas fir, white fir, and incense cedar form the greater part of the cut made by this company. Logs are skidded to the landings by donkey engines. From the landings, they are taken to the sawmill at Pino Grande by means of a narrow gauge railroad. From the sawmill, which cuts from 125,000 to 150,000 board feet per day, the rough lumber is hauled to the planing mill and box factory at Camino over the company's narrow gauge railroad.

An approximate diameter limit of 16 inches has been established in the case of yellow and sugar pine; however, utilization of all the species is rather complete. Not enough sugar and yellow pine seed trees are being left to reseed the land properly. Little attention is paid to the young growth during logging operations, with the result that a large per cent of it is destroyed. Trees are felled in, and skidded through thick clumps of reproduction, often killing nearly the entire thicket. And a large per cent of the remaining growth on the recently cut-over land has been killed by fire. If a profitable second crop is to be secured from this tract, particularly from the areas now being logged, more care must be used to prevent needless destruction to young growth, and to eliminate fire.

Waste in Logging.

The waste in logging on the old cut-over land was enormous. Only the best logs were taken, and long sections of merchantable size were left to rot in the woods. Stumps were cut high; some measured to a height of over eight feet.

In the recently cut-over land the chief waste is in the broken timber and in the unused merchantable tops. Many of the trees are so badly smashed in felling that from one to three good logs are rendered unfit for use. Many of the trees in this locality are short and crooked in the tops, and consequently, the waste is not nearly as great as appears in the tables below. But a 12 to 16 foot log of merchantable size could be secured from nearly every unbroken top.

The following table shows the measurements taken on two average sample plots:

WASTE IN LOGGING.

Section 5, T. 12 N., R. 12 E.

Plot No. 1; 1/16 acre.

Stumps			Unused tops		Unused merchantable section		Trees left, 6 inches and over in diameter		Remarks
Species	Diameter outside bark (inches)	Height (feet)	Total length of top (feet)	Diameter outside bark at butt (inches)	Length to 6 inch diameter (feet)	Diameter outside bark at butt (inches)	Species	Diameter breast high (inches)	
Yellow pine	32.0	2.6	66.5	23.0	56.0	23.0			Top crooked. Could not be utilized. Forked at 13 inch diameter. Very limby. Forks in 16 feet. One log could be taken. Has brushy top at 10 inch diameter.
Yellow pine	59.1	3.1	55.0	28.8	48.0	28.8			
Yellow pine	31.2	2.6	31.7	16.0	16.3	16.0			
Yellow pine	50.0	2.7	35.8	24.0	29.6	24.0			

Plot No. 2; 1/16 acre.

Douglas Fir	37.2	2.6	Broken	24.0	48.0	24.0	Cedar	15.0	Alive and healthy.
Cedar	39.6	2.8	48.7	16.0	37.0	16.0	Douglas fir	24.0	Crooked at butt, top dead.
Yellow pine	36.0	2.2	46.4	18.0	28.0	18.0	Yellow pine	14.0	Dead stub.
			Broken						

Disposal of Slash.

No disposal has been made of the slashings on any of the cut-over lands. Tops have been left on the ground with branches unlopped, constituting the usual fire menace. In the recently cut-over land, except in those areas where fire has already swept through destroying all living growth, the condition is bad. In the areas which have been cut for more than ten years, the slash is decaying and the danger from fire decreasing. But on all areas that have been logged during the last ten years the slashings, combined with the thick chaparral that has come in since logging, remains as a serious obstruction to second growth.

Conclusions.

The Donaher Lumber Company makes no pretense of practicing conservative forestry. Their annual cut is made without regard to the annual or periodic increment. Reproduction is given little consideration, and apparently, no effort is being made to secure a future crop.

The diameter limit established removes practically all of the merchantable timber and not enough seed trees are left to naturally restock the logged areas. Unnecessary damage is done to trees left standing and to young growth.

Tops, lops and other debris left after logging are not piled or burned. Slash left in this manner constitutes a menace to second growth.

A system of fire protection is recognized, but it should be supplemented by the adoption of effective spark-arresters on the stacks of all logging locomotives and donkey engines.

During the time spent in studying this area a number of sample plots were carefully laid out and data secured for each one. The data obtained gives complete evidence of the amount of waste permitted both in past years and at the present and also the effect of careless logging upon reproduction.

THE DIAMOND MATCH COMPANY.

The holdings of the Diamond Match Company are situated in Butte, Tehama, Shasta, and Plumas counties. The tract comprises an area of about 160,000 acres, of which, approximately 115,000 acres have been logged.

The exact acreage of cut-over land was not obtainable, since a large area was cut over by the Sierra Lumber Company. The latter sold its holdings to the Diamond Match Company, after having cut most of the best trees, and the purchasing company followed with a second cutting. The elevation of this tract ranges from 3,500 to 5,000 feet above sea level.

The company maintains one sawmill, which is located at Stirling City; 12, 14 and 16 foot logs are taken, and these are hauled from the camps to the mill by the company's railroad. The logging camps are located 10 to 30 miles east of Stirling City. Approximately 40 miles of narrow gauge railroad is maintained in the woods to haul the logs from the various camps to the Transfer. Six locomotives do this work. At the Transfer, which is located eight or ten miles from Stirling City, the logs are transferred to a standard gauge railroad. The logs are then hauled directly to the mill. As soon as cut, the lumber is placed on cars and hauled to Barber, a distance of 30 miles, via Butte County Railroad. The Diamond Match Company's plant is located here. The lumber is piled and seasoned at Barber, and a portion of the best grades

of sugar pine selected and used in the manufacture of matches. The remaining sugar pine, other species and small stock are used in the manufacture of box shook and sash and door material or used as dimension lumber.

The mill at Stirling City runs eleven months in the year and cuts, on an average, 202,000 board feet per day. (Cut in 1912.) The mill has a maximum output capacity of 300,000 board feet per day.

Logging on the holdings of the Diamond Match Company is very difficult and expensive, since the country is very rough and cut by deep valleys and narrow broken ridges. There is very little level or easily logged land.

Type.

The pure sugar pine-yellow pine type prevails throughout the holdings. Incense cedar (*Libocedrus decurrens*) and a great amount of white fir (*Abies concolor*), is found in association. Very little Douglas fir, commonly termed red fir, is found in the region now being cut. However, good stands of young Douglas fir are to be found in this locality.

Because of the rough character of the country, the stand, taken as a whole, is scattered. A great portion of the area is of a granite composition and in such situations the timber is of a poorer quality than that growing on the lower slopes and in the ravines. Unless, in the estimation of the company, it will bring \$15 or \$18 per thousand board feet, the timber found on the granite formation is left. The timber is usually short, scrubby, limby, and well scattered.

During the logging season of 1913 several 8 and 11 log trees, varying in diameter from 70 to 102 inches, and scaling 20,000 to 33,000 board feet, were taken out. The stand will average 14 to 20 thousand per acre.

Fire.

No serious fires have occurred in this locality since 1910, when 2,100 acres of the Diamond Match Company's holdings burned. This was a very severe fire, and not only threatened, but set fire to Stirling City and the company's mill. The town and the mill barely escaped, and several million feet of logs were destroyed. The area burned was cut-over land composed of very thick second growth yellow pine and sugar pine. The burned area is absolutely bare. In the future, however, the various brushes will come in. They are now 1 to 3 feet in height and very vigorous. On a sample plot the forest growth, as determined by count, was as follows:

Species	Number
Sugar pine, 1 to 5 inches in diameter-----	10
Yellow pine, 1 to 4 inches in diameter-----	20
Douglas fir, 1 to 3 inches in diameter-----	5
White fir, 1 to 3 inches in diameter-----	6
Cedar, 1 to 4 inches in diameter-----	20

All growth is scattered and practically no timber remains. Such growth as sweet birch, dog wood, squaw carpet, ferns, scrub oak and an occasional manzanita and buckthorn, are slowly taking possession of the area. The soil is of a reddish, sandy nature. The only place where forest growth is presenting a favorable appearance is along the Butte County Railroad. Here may be seen many yellow and sugar pines, ranging in height from 1 to 6 feet. On moist and protected situations, yellow pine, sugar pine and white fir seedlings are grad-

nally coming in. Aside from these few examples, the burned area is an absolute waste.

Other fires which occurred on the company's holdings were small and did no damage to speak of. Undoubtedly fires swept the timbered area years ago, as nearly all of the mature trees are more or less fire scarred.

One of the chief reasons for lack of bad fires during recent years is that all donkey engines have been equipped with efficient spark-arresters. Another reason for the absence of serious fires is that the company is very careful. All fires are extinguished, as soon as discovered, by the donkey engine crews, and if necessary, by the whole woods and mill crews. This system is fairly satisfactory for the present, as men are always scattered throughout the woods and may be called upon in case of fire. The company does not pile or burn its slash, and the cut-over region is constantly in danger from fire.

The company gives fairly good fire protection to its timbered lands, but no systematic fire protective system is employed over the entire tract. The company has, in the past, built some fire lines, and at one time a lookout station was maintained on Bald Mountain. The United States Forest Service now has possession of this lookout. Both the main offices at Barber and Stirling City are connected by telephone to the various camps, the Transfer, Ramsey Bar and other railroad order points, so in case of fire help can be promptly obtained. In addition to the telephone system, two track walkers are employed. One follows each logging train, and the other watches bridges to detect fires which may be set by locomotives. Each track walker or patrolman has a speeder and can cover considerable territory. In several instances, small fires have been put out by them. Fire extinguishers and barrels of water have been placed on every bridge.

All logging engines burn oil, and the donkey engines are equipped with spark-arresters. Shovels and axes are always kept near the donkeys, and if a fire is set, it is promptly extinguished. The camp foremen are constantly riding between camps and going over the ground, so all fires discovered are reported and fought promptly.

The timber holdings in Tehama County near Lyonsville are protected from fires by a patrol system. This patrol consists of six men, and it is their duty to patrol this entire tract each day. One man, the chief patrolman, goes over the tract once a week and has general charge of the work, while the other men patrol specified districts. There is a lookout on one of the mountains in the locality.

The company is protecting its timbered lands in a very efficient manner. A governed system of fire protection has been established by the company for its mills and factories. These are equipped with the automatic sprinkling system and the burner and smokestacks have thick screens which serve as spark-arresters. Fire hydrants are stationed throughout the grounds and a complete fire alarm system has been arranged.

The Diamond Match Company does not burn its slash and the logged lands are not patrolled other than along the railroad. Furthermore, the company will finish logging in their present locality in two or three years. Therefore, it is to be feared that during a dry season a fire may run through this slash, destroying most of the forest reproduction. In many cases this means that brush will gain possession and retard natural reforestation. By careful piling and burning of slash, the Diamond Match Company can well expect a second crop.

Forest Cover.

Dense stands of chaparral have taken possession of most of the old cut-over lands. In the vicinity of Doon, however, chaparral has not gained much headway, since the region was not heavily cut. Consequently, a good second growth of yellow pine and sugar pine is present. A good stand of white fir remains on the unburned areas since this species was not cut to any great extent.

The species forming the forest cover on the old cut-over lands are: manzanita, buckthorn, scrub oak, snow brush, and deer brush. Other species, such as dogwood, alder, aspen, willow, and witch-hazel are found throughout the recently cut-over lands. The entire recently cut-over area is abundantly stocked with white fir.

The ground cover in the virgin forest is good. It is kept fairly moist, decomposes well and makes an ideal germination bed. In the open granite formation the ground cover is very poor and in every camp visited this fact was very noticeable. On the cut-over lands, ground cover, naturally, is scarce. The ground cover observed on such localities consisted of squaw carpet and ferns, and a thin coating of needles and duff. Particularly was this true of the high and dry places. The ground cover was much better preserved on the moist situations.

Second Growth.

Several quarter acre sample plots were taken on representative cut-over land in the vicinity of Doon and Stirling, to show the actual amount of reproduction coming in. The number of trees over one inch in diameter were counted and tallied by species. The figures obtained show that enough second growth is present on most of this tract to produce a good future crop if fire is kept out. A study was also made to determine the rate of growth of the trees found on each sample plot. In each plot, the average tree was determined and felled and a complete stem analysis made for each foot section down to a point 2 inches in diameter. These figures serve as an indication of the length of time that must elapse before the area will again be ready to cut. Sample plot No. 1; 9-year cutting—yellow pine is coming in very thickly; white Douglas fir and cedar are doing very well. The area is badly in need of protection from fire.

Species	Number
Sugar pine, 4 inches in diameter, 14 feet in height.....	2
Yellow pine, 1 to 12 inches in diameter, 5 to 28 feet high.....	33
Douglas fir, 1 to 6 inches in diameter, 5 to 14 feet high.....	11
Cedar, 1 to 8 inches in diameter, 5 to 18 feet high.....	42

Logging.

Considerable damage is done to reproduction by the logging operations. The ground system of skidding is used and as a result, the ground is torn up by logs when being pulled and the damage to young growth is apparent.

A diameter limit of 16 inches on the stump has been established for all species and all stumps are cut to an average height of 2.6 feet. The "buckers" have been ordered to cut all logs down to a 16-inch top. Even with this diameter limit, insufficient seed trees are left to reseed the area. There are not enough trees per acre in the original stand to permit a lower diameter limit and as may usually be seen on the high granite slopes, the area is left practically bare.

These chutes are frequently made of sound and merchantable logs, used but a short time and then allowed to remain in the woods as waste.

Whenever sugar pine and yellow pine grow in pure or nearly pure stands, the area is absolutely cleaned. Such situations usually are being replaced by young growth of the same species.

Chiefly sugar pine and yellow pine are being cut for the market. Fir is taken only for a specified order or when it has to be removed on the railroad right of way. White fir and cedar will, undoubtedly, be the predominating species in the next stand if the company continues to discriminate against them.

Waste in Logging.

The chief waste noted on this tract was that of unused big sugar pine and yellow pine logs. Only the best is taken by this company, and many hundreds of fairly good grade logs are left in the woods. The majority of the larger trees on the tract are overmature. As a result, trees are decayed and punky in the center. When falling, these trees smash into many pieces making them useless. The fallers are very careful, but many sound looking trees are worthless when cut.

Disposal of Slash.

No disposition is made of the slash. On the recently cut-over lands it constitutes a serious menace to reproduction; and when fire comes in, as it most invariably does, it destroys all the young growth and much of the merchantable timber. If the branches were lopped from the tops and the debris piled and burned in the fall, ample protection would be afforded to reproduction. The slash constitutes a decided fire menace and existing conditions constantly threaten reproduction and the remaining timber.

As in other power logging operations, considerable second growth and reproduction is injured by falling and yarding timber. In the latter case logs are jerked and rolled through the heavy reproduction and second growth.

Grazing.

The Diamond Match Company leases its cut-over lands for sheep and cattle grazing purposes to the Miller & Lux Company. No particular policy has been adopted to prevent overgrazing and the sheep graze from one place to another, depending upon the quantity and quality of feed. The sheep, grazing over newly cut-over land, eat and trample down a great deal of reproduction.

Conclusions.

The Diamond Match Company is not practicing conservative forestry, and the annual cut is made without regard to yield. No rotation of crops has been established and the future yield is being given no consideration.

A diameter limit of 16 to 18 inches has been established for the species being marketed. Some provision for natural reproduction has thus been made, but this alone will not produce a fully stocked stand of the desirable species. Too few seed trees are left.

White fir is not being logged close enough, so this species will form a large percentage of the next crop.

There is a large waste in the form of merchantable tops and logs. Much of this stock could be used in the manufacture of boxes and

sashes and doors. Many fairly good logs are left to rot in the woods. Logs that will not bring \$15 per thousand are not considered of any value.

Tops, lops, and other refuse left after logging are not piled or burned. Slash left in this manner invites fire, which once started, may destroy the entire holdings. A fire in this region would be expensive and hard to suppress.

It seems that it would be practical and economically possible for this company to pile its brush at the time of logging and to burn it carefully in the fall.

Some precautions are taken against fire in the woods, and prompt action is taken to extinguish fires that do start. The locomotives burn oil and all donkey engines are equipped with efficient spark-arresters.

FRESNO FLUME AND LUMBER COMPANY.

In General.

The Fresno Flume and Lumber Company owns 48,943 acres of forest land in northern Fresno County. Of this, over 32,000 acres have already been cut over. The box factory and planing mill are located at Clovis, while the sawmill is situated at Shaver Lake, at the north end of the company's holdings, the rough lumber being sent by flume from Shaver to Clovis, a distance of 46 miles.

The elevation of the tract ranges from 5,200 feet at Shaver to over 6,500 feet at the south end of the area. For the most part, the land is hilly, with varying slopes; there are numerous small, level meadows at the base of the hills. On the tops and slopes of many of the mountains are large outcroppings of granite; but the light granite soil, characteristic of the greater part of the tract, is able to support a good forest growth. The numerous small meadows are well adapted for agricultural purposes, while the slopes are suitable only for forest growth. The whole area is situated on the south slope of the San Joaquin River watershed, which supplies the San Joaquin and Sacramento valleys with a large part of the water used for irrigation. The canyon of the river proper is steep walled, but the tributary streams drain large rolling areas in Fresno and Madera counties.

Type.

The old cut-over land near Shaver Lake and up to an elevation of nearly 6,000 feet was originally the sugar pine—yellow pine type. White fir and incense cedar entered into this type in varying proportions, over some areas white fir predominating. In the wet places around the shores of the lake this type gives way to a fairly dense stand of lodgepole pine, mixed with scattered yellow pine and white fir. In places the type is broken by grassy meadows, or by large outcroppings of granite rock.

The remaining uncut timber of this area lies at an elevation above 6,000 feet and is the sugar pine type, mixed with scattered yellow pine, white fir and incense cedar. The stand as a whole is rather open but the individual trees, particularly the sugar pines and white firs, attain great height and diameter. The stand averages approximately 30,000 board feet per acre.

Fire.

There have been no bad fires on this tract in recent years. A few small fires have occurred nearly every year for the past five or six years but have been extinguished before occasioning much damage. In 1908, a fire in T. 9 S., R. 24 E., burned over 320 acres of the old cut-over land. This was the largest burn on the tract in the last ten years, and completely destroyed the reproduction. Nearly the entire cut-over area is in a dangerous condition. The slash has been left on the ground, and, with the unused logs, dead stubs, and chaparral, constitutes a very serious menace to reproduction. On the land which has been cut over for twenty years, the conditions are not so hazardous, for the slash is gradually decaying and forming humus. If fire is kept out for a few years more, the old cut-over area will be in good condition, and the danger from slash will be reduced to a minimum. But, under the present conditions, a fire on any of the rest of the cut-over area, would destroy all reproduction in its path. Sparks from the donkey engines have been the cause of several recent fires.

Very little is being done by the company to protect their holdings from fire. The engines and locomotives are equipped with spark-arresters, but this alone is insufficient to eliminate the danger. One of the chief reasons that no serious fires have occurred in recent years, is that the tract is surrounded by national forest land. The lookout station on Mount Baldy commands a good view of this entire tract, and the company is immediately notified when a fire breaks out. However, with the slash in its present shape, fire is exceedingly difficult to combat. The improved property around the sawmill is well protected. Fire hydrants are located at convenient intervals, and an automatic sprinkling system has been installed in the mill.

Grazing.

Twenty-seven thousand acres of the cut-over land are leased to the sheep men each year, for a sum ranging from \$1,600 to \$3,000. The numerous grassy meadows and frequent streams make the area well suited for grazing. The feed is usually plentiful. In addition to this, nearly two hundred campers spend a portion of the summer on the meadows near Shaver Lake. Many of these campers bring horses with them and let them graze on the meadows or in the nearby cut-over land. So far as could be determined, no damage has been occasioned by grazing.

Forest Cover.

The forest cover found on this area comprises the following species: buckthorn, manzanita, lilac, alder, quaking aspen, wild rose, gooseberry, ceanothus, chinquapin, willows, azalea, and scrub oak. The buckthorn, manzanita, and scrub oak are scattered throughout the entire tract. Scrub oak grows in mixture with the virgin timber, while the manzanita and buckthorn occur most frequently in the open areas on dry situations, frequently making a dense growth. The rose, gooseberry, ceanothus, and chinquapin seem to prefer the drier situations, while the

alders, aspens, willows, azaleas, and elderberries prefer the cool, moist locations near the streams. Except in the few small areas where the forest cover is exceptionally dense, reproduction is not appreciably retarded. The ground cover is thin over most of the area. The soil is a decomposed granite with only a thin layer of humus.

Logging.

Sugar pine, yellow pine and white fir form most of the cut made by this company. Sugar and yellow pine are being taken down to a diameter limit of about 12 or 14 inches, while only the large white fir is cut. Consequently, most of the seed trees left standing are white fir or cedar. Logging is done with donkey engines and dry chutes. From the landing, the logs are hauled to Shaver Lake by the logging trains, towed across the lake to the sawmill by a tugboat, and the rough lumber is flumed to the planing mill and box factory at Clovis. The sawmill runs in two shifts, and cuts about 230,000 board feet every twenty-four hours. Many of the smaller trees are broken by careless felling of the large ones, while others are smashed by careless skidding of logs. But, in spite of the damage done to the reproduction during logging, enough healthy trees are left standing to eventually produce a fair stand of timber, if the area is protected from fire. The older cut-over lands are already covered with a vigorous growth of yellow pine, sugar pine, white fir and cedar. These lands, however, were logged with ox teams and only the pick of sugar and yellow pine was cut.

The next crop on the cut-over land will be chiefly yellow pine and white fir, with scattered sugar pines and cedars. More seed trees of yellow and sugar pine should be left to insure reproduction of these more valuable species.

Waste in Logging.

The waste in logging under the old ox-team system was enormous. But one or two logs were taken out of the best and largest trees, and the rest was left to rot on the ground. Another great waste was occasioned by using good logs for the construction of chutes which soon were abandoned.

On the more recently cut-over land, the waste has been greatly lessened. Tops are being utilized down to a diameter of approximately twelve inches, and many of the broken pieces are cut up into fuel for the donkey engines.

Sample plots of $\frac{1}{16}$ -acre were taken on areas as nearly as possible representative of average conditions. The diameter and height of each stump were measured and tabulated by species. Unused tops were calipered at the butt, and their total lengths were measured in addition to the merchantable length to a point six inches in diameter. The following table shows the result of such measurements for each plot:

WASTE IN LOGGING.

Fresno Flume and Lumber Company.

Plot No. 1; 1/16 acre.

Species	Stumps		Unused tops		Unused merchantable section		Trees 6 inches and over in diameter left standing		Condition
	Diameter outside bark (inches)	Height (feet)	Total length of top (feet)	D. O. B. at butt end (inches)	Length to 6 inch diameter (feet)	D. O. B. at butt end (inches)	Species	Diameter breast high (inches)	
Sugar pine	31.0	2.5	Broken off	14.3	30.6	14.3			
White fir	56.0	2.8	Rotted off	32.0	47.0	32.0			
White fir	12.0	2.8	Dead and broken						

Plot No. 2; 1/16 acre.

White fir	20.0	2.9	34.0	12.0	22.0	12.0	Cedar	10.0	Injured during logging.
White fir	21.0	2.4	Smashed	9.5	10.2	9.5	White fir	6.0	Top broken off during logging.
White fir	25.0	3.4	28.6	12.0	16.6	12.0			

Plot No. 3; 1/16 acre.

Cedar	31.0	2.8	39.1	16.1	30.6	16.0	Sugar pine	14.0	Injured during logging.
Yellow pine	25.0	2.3	40.0	17.1	24.7	15.0			
Yellow pine	24.0	2.8	Broken off by storms		8.6	17.0			

Disposal of Slash.

No disposal has been made of the slashings on any of the cut-over land. Tops have been left on the ground with branches unlopped, constituting a decided fire menace; at the present time reproduction is seriously threatened.

The company has cut some timber on national forest land, and in these areas, the slash has been carefully piled and burned, thus leaving the area in good condition for the development of a future forest crop.

Recently Cut-over Land.

The reproduction on the recently cut-over land is poor. Too few seed trees of the valuable species have been left to properly reseed the barren areas. Over 50 per cent of all young growth in the virgin stand is destroyed during logging operations.

Conclusions.

The Fresno Flume and Lumber Company is not practising conservative forestry. No working plan for forest management has been prepared and the annual cut is made without regard to the future supply. The annual increment has not been ascertained, and the company does not know that a possible rotation would not be profitable. So few seed trees have been left that a great many years must elapse before the areas now being logged will have produced sufficient timber to afford a profitable second crop. More seed trees of the valuable species, namely, sugar and yellow pine, should be left on the areas now being logged. The slash has never been disposed of, but has been left on the ground to form a constant menace to reproduction. Donkey engines have, in recent years, been the cause of numerous fires on the cut-over land.

MADERA SUGAR PINE COMPANY.

In General.

The Madera Sugar Pine Company owns 21,616 acres of forest land in Madera and Mariposa counties. Of this amount, approximately 10,000 acres have been cut over. A box factory and planing mill are located at Madera, to which place the rough lumber is flumed from the mill at Sugar Pine, a distance of nearly sixty miles. The elevation ranges from about 4,500 feet at the camps to nearly 6,000 feet at the summit of the ridges. The greater part of the area is located on the watershed of the Merced River. The Chowchilla ridge forms the dividing line between the watersheds of the San Joaquin and the Merced rivers, and the mill at Sugar Pine and a part of the old cut-over land lie on the San Joaquin side. But by far the greater portion of the tract is drained by streams tributary to the South Fork of the Merced River.

Type.

The sugar pine type prevails throughout most of the uncut area. Yellow pine, incense cedar and white fir, enter into the type in varying quantities. In limited areas the type becomes sugar pine-yellow pine, with the cedar and fir also abundant. A few lodgepole pines are found along the streams.

The stand as a whole is dense, and the trees grow to a great height and diameter. It was found, by cruising a number of sample acres, that the stand averaged approximately twenty-eight trees over twelve inches in diameter per acre. Some trees were found measuring six feet in diameter.

The forest often opens out into small meadows, particularly on the gentle slopes near the streams, and occasionally the type gives way to small, dense areas of bear clover. Sugar pine attains a large size on this tract; the deep, rich soil being well adapted for its needs. It was never found in pure stands, but occurred on all slopes and a variety of soils, in mixture with yellow pine, white fir, and incense cedar. Nor does yellow pine grow in pure stands on this tract; it also occurs in mixture with the other species. White fir was found growing on all slopes, and at all elevations on the tract; the same was true of incense cedar.

Fire.

Nearly the entire tract has, at some time, been burned over. A large number of mature trees have been badly burned at the butt, and nearly every tree bears some sort of fire scar. But there have been no bad fires in the virgin timber in recent years. In the cut-over land, however, fires have occurred nearly every year. In 1910, one fire in the cut-over land, burned over 320 acres, destroying all reproduction and a portion of one of the logging camps. A part of the land cut over this year has already been burned over. Probably 50 per cent of the entire area cut over within the last five years has been burned.

Wherever these fires have occurred, nearly every standing tree has been killed. These fires in the cut-over land have been caused chiefly by sparks from the locomotives and donkey engines; although the company endeavors to be careful.

Very little has been done to protect the cut-over land from fire. No fire patrol is maintained, and the slash has been left and constitutes a serious fire menace. However, it is not the policy of the company to neglect its fires.

In 1913 the company adopted the policy of burning the slash along the railroad right of way; this is a step in the right direction. The slash should be piled and burned throughout the entire recently cut-over area in such a way as to do the least possible damage to reproduction.

Forest Cover.

The forest cover found on the holdings of this company comprises the following species: manzanita, buckthorn, oak, bear clover, wild lilac, azalea, alders, poplar, willow, ceanothus, wild rose, and chinquapin. Except in a few sections where the forest cover is exceptionally thick, reproduction is not greatly retarded. Abundant reproduction was noted in the old cut-over land.

Ground Cover.

The ground cover is good in the virgin timber, where it is composed chiefly of a good layer of needles, ferns, grasses, and thimbleberries. The humus is especially thick in the small flats along Big Creek. On the cut-over land the ground cover is poor, rendered so by logging operations and fires.

Logging.

Sugar pine and white fir form most of the cut made by this company. Owing to the steep character of the country, all the logging is done with donkey engines. Most of the logs are hauled to the landing by means of dry chutes, but a "sky line" is used to get the logs out of the canyon.

The mill at Sugar Pine is equipped with two band saws, and cuts from 250,000 to 300,000 board feet every twenty-four hours, working day and night shifts. From the mill, the rough lumber is flumed 54 miles to the planing mill and box factory at Madera.

No consideration is given to reproduction during logging operations. Trees are felled wherever most convenient, often in dense clumps of young growth, completely destroying the latter when the logs are skidded out. Many trees are also killed, peeled, or badly broken by the cables. The destruction is most complete in the areas logged by the skylines. Every tree of any size has to be cut down in order to make an unobstructed path for the logs. Sugar and yellow pine are cut down to a diameter of about 14 inches. Practically all white fir and cedar from which a log can be taken is cut. More seed trees, particularly of sugar and yellow pine, should be left to reseed the area. By exercising a little care during logging, and leaving a few more seed trees, the area would be in good shape to produce a future crop, if protected also from fire.

Waste in Logging.

The company is pursuing a policy of fairly close utilization. Trees are cut down to a diameter of about 14 inches and tops are taken to a diameter of 8 to 10 inches. Stumps are cut to a height of from 2 to 2½ feet. The poor trees, the trees on the burned areas, and the slabs at the mill are cut into firewood for the locomotives and donkey engines.

In general, the chief waste is in broken timber and unused chute poles. Many trees have been felled down hill, smashing the tops so that they can not be used.

Sample plots of $\frac{1}{16}$ -acre were chosen on areas representative of average conditions. The diameter and height of each stump were measured and tabulated by species. Unused tops were calipered at the butt and then total lengths were measured, in addition to the possible merchantable length, to a point six inches in diameter.

The following table shows the measurements for each plot:

WASTE IN LOGGING.

Sample Plot No. 1; 1/16 acre. Near Camp 1.

Stumps			Unused tops		Unused merchantable section		Trees 6 inches and over in diameter left standing		Remarks
Species	Diameter outside of top bark (inches)	Height (feet)	Total length of top (feet)	Diameter outside butt end (inches)	Length to 6 inch diameter (feet)	Diameter outside bark at butt end (inches)	Species	Diameter breast high (inches)	
Yellow pine	30.0	2.6	Badly broken	18.0	Badly broken	18.0	Yellow pine	10.8	Fair -- Slightly peeled by falling tree.
Sugar pine	28.8	2.4	19.7 Broken off	8.6	11.0	8.6			
Yellow pine	30.0	2.9	37.0	13.2	21.1	13.2	Yellow pine	13.1	Good -- Alive and healthy.
Yellow pine	26.0	2.2					Cedar	14.0	Poor -- Badly burned at butt end.
Yellow pine	30.0	2.8	38.4	12.0	23.4	12.0			
Sugar pine	20.2	2.5	21.3	9.5	9.0	9.5			Broken off at 3 inch diameter.
Yellow pine	20.0	2.3	Broken off at 5" diam.	9.6	16.5	9.6			

Sample Plot No. 2; 1/16 acre.

Sugar pine	26.0	1.7	31.5	9.6	14.0	9.6	Cedar	38.0	Good.	Top broken off about 30 feet from ground.
Yellow pine	36.0	2.3	22.6	9.0	7.6	9.0	Yellow pine	18.0	Poor --	Forked 20 feet above ground.
Yellow pine	24.0	2.0	Broken off at 6" diam.	9.6	11.8	9.6	Yellow pine	13.2	Poor --	

Sample Plot No. 3; 1/16 acre.

Yellow pine	19.2	2.1	24.0 Broken	9.0	16.0	9.0	Yellow pine	15.6	Good --	Alive and healthy.
Sugar pine	21.6	2.2	15.0	6.0		6.0				
Sugar pine	25.2	2.0	40.1	13.1	35.1	13.1				Top buried under large log.
Sugar pine	20.4	2.1		12.0	25.0	12.0				Top and unused sections badly broken by felling down hill.
Yellow pine	22.8	2.1	43.7	13.2	29.0	13.2				
White fir	31.0	2.3	Broken off Dead	15.6	30.2	15.6				

Disposal of Slash.

No disposal of slashings has been made by this company. Tops have been left on the ground with branches unlopped, forming a constant chance for the occurrence of destructive fires. In the old cut-over land, the slash is decaying fairly rapidly, and if fire is kept out, will form a good layer of humus in a few years. Most of the recently cut-over land has been burned over, and the slash destroyed.

In 1913 the company adopted the policy of burning, at favorable times, the slash along the railroad right of way. This plan safeguards the rest of the cut-over land to quite an extent, as by far the largest per cent of the fires are started by sparks from the locomotives and engines. But all the slash should be carefully piled away from the reproduction and burned after the first rains in the fall.

Second Growth.

The species comprising the second growth on this tract are sugar pine, yellow pine, white fir and incense cedar. On the area cut about 1903 the reproduction is very good. This is partly due to the fact that a large number of healthy sugar and yellow pines were left as seed trees, and also to the fact that there have been no fires since logging. The ground cover is good, consisting of a thick layer of needles, herbaceous plants, and decaying slash. Bear clover is coming in thick in small areas, but reproduction does not appear to be greatly retarded by it. Numerous seedlings of all the species were noted coming up under the bear clover. The following sample plot of $\frac{1}{16}$ -acre was taken in an average location, and may be regarded as typical of the ten year old cut-over land:

REPRODUCTION ON AREA CUT IN 1903. 1/16 acre.

Trees over 6 feet high				Under 6 feet in height				
No.	Species	Diameter breast high (inches)	Height (feet)	Height (feet)	Sugar pine	Yellow pine	White fir	Cedar
1	Cedar	1.5	7.0	1		1		3
2	Yellow pine	4.0	13.0	2				1
3	Yellow pine	3.0	13.0	3				4
4	Yellow pine	6.0	17.0	4				2
5	Yellow pine	2.5	8.0	5		1		4
6	Cedar	2.5	9.0	6				5
7	Cedar	1.0	7.0					
8	Sugar pine	4.0	12.0					
9	Sugar pine	1.3	8.0					
10	Cedar	1.0	7.0					

It may be seen from this table that if fire is kept out, a good stand of timber will eventually cover the area.

In examining the land cut over five years ago (1908), it was found that fire had burned over most of the area, killing all the seedlings and about 90 per cent of the seed trees. An average of about three dead standing trees per acre shows that the area would probably have produced a fair future stand of timber had fire not prevented. Ferns,

bear clover, manzanita, rose and buckthorn are slowly taking possession of the land. Two sample acres taken in the path of the fire showed five dead white firs, ranging from 8 to 20 inches in diameter, and an absolute lack of living reproduction. A third sample acre, taken where the fire had not reached, showed: 1 cedar, 14 inches in diameter; 1 cedar, 26 inches in diameter; 1 white fir, 18 inches in diameter; 1 white fir, 22 inches in diameter; and 1 cedar seedling, 3 feet high. Both cedars had been badly scorched, but not killed by the fire.

Conclusions.

The Madera Sugar Pine Company is not practising conservative forestry. Logging is carried on without regard to the future or to the effect it has on present reproduction. Practically every tree of merchantable size on the area is felled and utilized. Fairly close utilization is being practised. More care could be used in felling, to prevent the tops from smashing, and the chute poles could be utilized as ties or firewood. No disposal has been made of the slashings. For this reason the heat from the fires that have occurred in the cut-over land was so intense that practically all reproduction has been destroyed. The remaining slash should be carefully piled away from the reproduction and burned after the first rains. More care should be exercised to protect the cut-over land from fire. The locomotives and engines are equipped with screens to prevent sparks from escaping, but the wire meshing is evidently too coarse.

Small pine trees killed by fire. This quite frequently happens when reproduction takes place on or adjacent to areas similar to—

this. Here the tops and limbs have been allowed to remain after logging and will be a constant menace to young trees in the future. As insurance against destruction of the future timber crop such material should be piled and burned or disposed of in some way.

MONO LAKE LUMBER COMPANY.**In General.**

The Mono Lake Lumber Company owns 11,560 acres of forest land in Mono County. Originally the tract comprised approximately 23,000 acres, but much of the cut-over land has been turned back for taxes. The lumber cut by this company has always been sold in the local markets. No railroads or flumes have been built to enable them to reach the outside markets. Operations were commenced as early as 1875, when the mining camps at Aurora and Bodie were most active. At that time, the logs were hauled to Mono Lake by bull teams and rafted across and hauled over the mountains to the mines. About 1880 a narrow gauge railroad was built between Bodie and Mono Mills, where the sawmill was then built. Since the company has had to depend entirely upon local consumption in disposing of their lumber, the operations have necessarily been irregular. In the early days when the mining camps were in full swing, the mill ran night and day to supply the demand. But, in late years, most of the mines have ceased operating, and the logging season is often very short. Sometimes the mill is run only a month or six weeks during the entire year.

The tract is located south of Mono Lake, and immediately east of the Mono Craters. The soil is a volcanic sand and pumice. The slopes are gentle, with the elevation ranging from 7,000 to 8,000 feet. No streams run through these holdings, and because of the lack of water, the cut-over land is entirely unsuitable for agricultural purposes.

Type.

The pure Jeffrey pine type prevails throughout most of the area. Lodgepole pine is found to some extent in association with the Jeffrey pine, in the higher elevations, and is cut for mining timber and poles. An occasional yellow pine is also found entering into the mixture. The stand as a whole is poor. The trees are scattered and the lumber is of poor quality. Occasional trees reach a maximum diameter of six feet, but they are very short and scrubby. Very little clear lumber is obtained from even the largest trees. Owing to the open character of the stand, the branches, even on mature trees, persist nearly to the ground. Rarely can more than one clear log be secured from a tree. The sawed lumber warps and checks badly and can only be used for rough construction work, poles and mining timbers.

In many places the forest type gives way to large areas of dry sand, on which not even sagebrush is able to grow. The stand throughout the entire tract is open and nearly devoid of undergrowth. The timber will average from 7,000 to 8,000 board feet per acre.

Fire.

The timber in this region is too open to be in great danger from fire, and there is very little evidence of past fires. Very few of the mature trees bear fire scars deep enough to injure the tree. The scarcity of undergrowth makes it almost impossible for fires to spread. The only fire in recent years occurred in 1913. This was started, probably, by campers in the virgin timber and burned over nearly one hundred acres.

It was extinguished in a short time and occasioned no greater loss than the destruction of much of the ground cover, thus indirectly having an injurious effect upon reproduction.

The company endeavors to use every possible precaution to prevent fires. Skidding is done entirely with horses and the cut-over land is in no danger from sparks. The logging engines burn wood, but are equipped with spark arresters, and no fires have started along the right of way. One man at Mono Mills has been appointed to watch out for fires, and has authority to call out the entire crew if a blaze is discovered. Water barrels have been placed on the roof of the mill, and great care is taken to prevent the burning of improved property.

Forest Cover.

The forest cover in this locality is very thin. The principal species noted were sagebrush, mountain mahogany, and buckthorn. Sagebrush and mountain mahogany were found to some extent throughout the timbered and cut-over land, but it does not make sufficiently dense growth to retard reproduction. Large open areas are conspicuous over the tract.

The ground cover on this tract is very thin, not enough being present to form a good seed bed. In the virgin stand, near the trees, the ground cover is excellent.

A sufficient number of healthy trees have been left to reseed the area. The cut-over land is in good condition to produce good future crop.

Waste in Logging.

The Mono Lake Lumber Company is pursuing a policy of very close utilization. Logs are taken down to a small diameter, and the tops and branches are cut into cordwood.

There was considerable waste in the old cut-over land. Stumps were cut about three feet high and long sections of merchantable size were left on the ground. But the present company is utilizing as much of this material as possible.

A few $\frac{1}{4}$ acre sample plots were taken on areas which represented average conditions. The diameter and height of each stump were measured and, in the following table, which shows these measurements, blanks are left for the unused tops and unused merchantable sections:

WASTE IN LOGGING.

Mono Mills, California.

Plot No. 1; $\frac{1}{4}$ acre.

Stumps	Unused tops			Unused merchantable section			Trees 6 inches and over in diameter left standing		Condition
	Diameter outside bark (inches)	Height (feet)	Total length of top (feet)	Diameter outside bark at butt end (inches)	Length to 6 inch diameter (feet)	Diameter outside bark at butt end (inches)	Species	Diameter breast high (inches)	
Jeffrey pine	33	2.6	No	waste	---	---	Jeffrey pine	8	O. K.
Jeffrey pine	34	2.6	No	waste	---	---	Jeffrey pine	10	O. K.
Jeffrey pine	23	2.5	No	waste	---	---	Jeffrey pine	14	O. K.
Jeffrey pine	26	2.4	No	waste	---	---	Jeffrey pine	21	O. K.

Jeffrey pine	36	2.6	---	---	---	---	---	22	O. K.
Jeffrey pine	29	2.6	---	---	---	---	---	---	---
Jeffrey pine	20	2.4	---	---	---	---	---	---	---
Jeffrey pine	35	3.0	---	---	---	---	---	---	---

How much of the slash from lumbering can be utilized. Large limbs made into cordwood and the small branches piled and burned.

Disposal of Slash.

No disposal was made of slash on the old cut-over lands. Unused tops were left on the ground to rot. However, the slash was not thick enough to seriously hinder a second growth, and none of the cut-over land was burned over. The old slash has decayed and no longer constitutes a fire menace. All the tops and lopped branches caused by recent operations have been cut into cordwood and either sold or used by the company.

Recently Cut-over Land.

Taking into consideration the scattered nature of the original stand, the reproduction on recently cut-over land is all that can be expected. A sufficient number of thrifty trees have been left standing to reseed the area. Nearly all of the second growth in the virgin stand is left, for very little damage was done during logging operations. No fires have occurred on the recently cut areas, but the ground cover is far too thin to form a good seed bed. However, reproduction is good and the next crop bids fair to being equal to the original stand.

To show more clearly the result of lumbering in this region, and particularly the result of logging with teams rather than donkey engines, sample plots one quarter acre each were laid out on representative cut-over areas. The height and diameter of each stump were measured. These measurements show the number, size and kind of trees removed. All remaining trees over one inch in diameter were calipered and recorded by species and diameter classes; and those under one foot in height and one to six feet in height were measured and classified.

The following table gives the measurements taken in tabular form:

REPRODUCTION ON RECENTLY CUT-OVER LAND.

Plot No. 1; 1/4 acre.

Mono Mills, California.

Species	Stumps	Species over 1 inch in diameter				Seedlings		
		Height (feet)	Diameter outside bark (inches)	Diameter breast high (inches)	Jeffrey pine	1 to 6 feet in height		Under 1 foot high

-----	-----	-----	-----	24	1	-----	-----	-----

Conclusions.

The Mono Lake Lumber Company is not practicing conservative forestry, in that no plan for forest management has been prepared and the cut is made without regard to yield. The timber in this locality is scattered and of poor quality.

No system of protection has been established. General care, however, is taken to prevent fires. A policy of very close utilization has been adopted. Wood is scarce in this locality and all the tops and lops are cut into cordwood for local consumption.

ROBERTS LUMBER COMPANY.

The Roberts Lumber Company's timbered and cut-over lands are situated in Sierra and Plumas counties. The tract comprises about 25,000 acres, of which, approximately 19,000 acres are cut-over and 6,080 acres are virgin forest.

This company has not been operating since 1908, hence the mill, located at Loyalton and the logging camps are closed. No plans have been made to resume operations, and as a result, the company is selling and leasing its lands as fast as possible.

Two concerns are logging small areas of Roberts Lumber Company's timber. The Reese sawmill and the California White Pine Lumber Company. The former has a contract to cut one million firs in sections 3 and 10, T. 20 N., R. 17 E., Sierra County, and the latter, three million firs near Spring Garden, Plumas County.

The examination of the Roberts Lumber Company's holdings therefore was confined chiefly to the cut-over area near Loyalton. In addition, the methods of logging as managed by the two contracting companies and the condition in which they left their small areas were examined.

Fire.

Several small fires have occurred on this tract from time to time, but the most serious one burned over two or three sections near Loyalton in 1911, when fires were so prevalent in this region. This area is practically void of growth; all second growth, composed chiefly of yellow pine and Jeffery pine, with the exceptions of occasional seedlings which were protected, or which have grown since that time, were destroyed, and sagebrush and chaparral are slowly gaining possession.

This fire was fought by all obtainable help from Loyalton and the United States Forest Service. The latter have patrolmen in this locality and the fire was soon controlled. Aside from this fire, no others have occurred to speak of.

The company does not maintain a patrol and has no fire protective system whatsoever. In fact, they feel the need of no such system since their logging operations have practically ceased. Further than this, the area is in no immediate danger from fire. The area is well cleared,

no debris to speak of is left on the ground as a fire menace, and that which does exist, is decaying very rapidly.

The only source of danger at present is from the Reese sawmill. But this mill will very soon cease operations, and then the fire danger will be at its minimum.

There is considerable young growth and timber on the area and, in case of fire, loss would be inevitable. The present condition of the cut-over lands has been largely determined by three factors, the original stand, fire, and the character of logging.

The original stand was composed chiefly of yellow pine and Jeffrey pine with white fir, and cedar taking the low moist situations, and an occasional California juniper. The elevation of this tract ranges from 5,000 to 6,200 feet above sea level; the species have considerable tops and are not very tall.

As a general thing the older cuttings, 8 to 15 years ago, are in the best condition, from the forester's point of view, for in former years trees below 18 and 20 inches in diameter were not considered of merchantable size, and in many localities the logging operations amounted to little more than a selection cutting of the larger, best, and mature trees. This is particularly true of this area and because of the density of the original stand and the non-presence of fires, a considerable amount of reproduction is present. That portion of the area in sections 10, 11, 13, 14, 15, 22, 23, 24, 25 and 26, T. 20 N., R. 16 E., and sections 7, 18, 19 and 30 T. 20 N., R. 17 E., is in good shape to produce a second crop while sections 5, 8, 9, 16, 17, 18, 19, 20 and 21, T. 20 N., R. 16 E., the more recently cut-over area, are not so good. A diameter limit of 14 inches was resorted to in cutting this area, and consequently more timber was cut than on the older cutting.

Sections 33 and 34, T. 21 N., R. 16 E., and classed as virgin timber, has but little merchantable timber. The area is more or less open in character and is covered mostly with sagebrush. The timber is scattering and of poor quality, being similar in form and character to nearly all the timber growing in this region, namely, short, limby, and having considerable taper. The soil is of exceptionally good quality, being a dark sandy loam, and possessing considerable moisture.

The area in general is pretty well cleaned of all debris. No unlopped tops and waste are left to speak of, and the fire menace is reduced to a minimum. Immediately after, and during the logging operations, all tops, branches and waste logs were cut into cordwood.

Aside from the small area located on the west side of the cut-over region, which was left as cut because of the hurry call to cease operations, the entire area is fairly well cleaned of all fire menace. The small area referred to above consists of approximately forty acres, which is in a very bad condition for fires. This area was left as logged, the trees have been felled, and the logs and tops are lying about on the ground. Not only is it a fire menace but it is a waste. Most of the logs are still in good condition and are of sufficient value to pay for cleaning up the debris left on the ground.

As in the cases of nearly all recently cut-over lands throughout the Sierras, the present cutting operations are leaving the country in a bad condition. Timber is logged more closely, and donkey engines are tearing up the younger growth, injuring trees which were not cut and in general, leaving the land in a badly slashed condition.

Type.

The pure yellow pine type prevailed throughout the holdings in the original stand, with white fir (*Abies concolor*) and cedar (*Libocedrus decurrens*) occupying the low flats and ravines. Higher up the juniper (*Juniperus californica*) may be found singly or in small groups. The white fir grows abundantly along all ravines and low flats.

The next crop will undoubtedly resemble that of the original stand, in that many seed trees of yellow pine and Jeffrey pine are left.

Reproduction and Second Growth.

No fires have gone through the area to speak of since the area was cut, hence the reproduction has been unhampered in its growth. A good pole stand of the merchantable species with an excellent under story of second growth and seedlings exists throughout. On the whole, the area under consideration, is restocking quite well.

To show more clearly the result of lumbering, sample plots of $\frac{1}{4}$ -acre each were laid out on representative cut-over areas. The diameter breast high of each tree above one inch was measured. A seedling count was also made.

From data so obtained an average tree was determined and a complete stem analysis of every foot section was made.

The following table gives the result of the measurements taken in tabular form:

SECOND GROWTH.

Sample Plot No. 1—6 year cutting.

Topography—Long ridges with gentle slopes. The soil is very rich and the reproduction is plentiful and doing well. The area is pretty well cleaned and in no danger from fire. The ground cover is very thin and is composed of pine needles and duff. The soil, however, is very good, being a dark sandy loam, and if it were not for the high elevation this vicinity would be ideal for agriculture.

Amount of growth—

Species	Number
Yellow pine, 1 to 6 inches in diameter	78
Cedar, 1 to 3 inches in diameter	7

The seedling count was as follows:

Species	Number
Yellow pine	68
Cedar	18
White fir	11

Rate of growth as determined by stem analysis of an average tree selected from the plot showed the following: Yellow pine, 33 years of age, had a diameter growth 3.1 inches, outside bark at stump height of 1 foot, and a height of 10 feet.

Sample Plot No. 2.

Reproduction is plentiful due to excellent soil. The forest cover, such as it is, consists of mesquite, mountain mahogany, sage-brush, buckthorn and grasses. The latter does not interfere with the forest growth. This plot is similar to Plot No. 1.

Amount of growth—

Species	Number
Yellow pine, 1 to 6 inches in diameter	56
White fir, 1 to 5 inches in diameter	44
Cedar, 1 to 7 inches in diameter	15

Seedling Count—(This plot heads in on a ravine which accounts for the heavy stand of white fir.)

Species	Number
Yellow pine -----	73
White fir -----	115
Cedar -----	53

Rate of growth—White fir 47 years of age had a diameter growth of 2.1 inches, outside bark, at stump height of 1 foot, and a height growth of 9.5 feet.

Sample Plot No. 3—8 to 15 year cutting.

This area is in a very good way for a second crop. It has not been burned over and the ground cover has not been disturbed. This is an old cutting and the original stand was not cut to a small diameter, thus accounting for the many seed trees.

Amount of growth—

Species	Number
Yellow pine, 1 to 7 inches in diameter-----	112
White Fir, 1 to 3 inches in diameter-----	5

Seedling count—

Species	Number
Yellow pine -----	96
White Fir -----	3

Rate of growth—Yellow pine, 30 years of age had a diameter growth, outside bark of 3.8 inches at stump height of 1 foot, and a height growth of 10.6.

Sample Plot No. 4—8 to 15 year cutting.

This plot is similar to plot No. 3, but very little ground cover, yet the soil is very good and has considerable moisture. The bare spots are being taken possession of by sagebrush.

Amount of growth—

Species	Number
Yellow pine, 1 to 5 inches in diameter-----	71
Cedar, 1 to 3 inches in diameter-----	9

Seedling count—

Species	Number
Yellow pine -----	117
Cedar -----	32

Rate of growth—Yellow pine, 19 years of age, had a diameter growth of 3.35 inches, outside bark, at stump height of 1 foot and a height growth of 8.9 feet.

Forest Cover.

The forest cover found on the holdings of this company comprise the following species: Manzanita, buckthorn, sagebrush (white), mountain mahogany, sweet birch, chokecherry, alder, aspen, willow, squaw carpet and mesquite.

Manzanita was found in only small scattering quantities on the cut-over area. Buckthorn growth was not very extensive and was found only in the bare spots. In general, reproduction was not retarded to any marked extent. Sagebrush and mesquite were found on all of the dry situations and gradual slopes. Mountain mahogany was found more frequently on the dry slopes, benches, and near the tops of the smaller mountains. The chokecherry, alder, aspen, and willow were found in moist localities, in ravines and near the small creeks.

Ground Cover.

The ground cover was found to be best on the moist flats and along the streams. In the old cuttings there is sufficient ground cover to make a fairly good seed bed. The ground cover as a rule, however, is very thin, consisting of needles, duff, squaw carpet, ferns, grasses, and herbaceous plants.

Logging.

As stated above, the Roberts Lumber Company is not operating its logging camps or sawmill.

The only logging being done on this company's holdings is that done by the Reese Sawmill near Loyalton, and the California White Pine Lumber Company near Spring Garden, Plumas County.

The Reese Sawmill.

This company has contracted to cut one million feet of pine and their operations are located near Reese's spur, sections 3 and 11, T. 20 N., R. 16. E.

Their equipment consists of a 20,000 per day capacity circular sawmill, one donkey, and several teams of horses.

The logs are handled in two ways—

1. They are snaked and skidded to a landing by the donkey. From here they are loaded on to big four-wheeled trucks and then hauled to the mill pond by six-horse teams.

2. Logs are also transported to the mill pond by means of a chute. The logs are formed into trails after being placed in the chute and then pulled to the mill pond by horses.

This company logs pretty clean, for all possible merchantable timber of all species down to 12 inches in diameter is taken. Trees are cut to a 6-inch top and logs eight feet in length are considered valuable.

Very little in the nature of forest growth remains on the area after logging. In fact, there is very little timber present in the original stand. The soil is rich, however, and undoubtedly the area will be reseeded by the neighboring seed trees of yellow pine and Jeffrey pine.

Waste in Logging.

No disposition of slash is made during the logging season, but in the fall it is the intention of the management to cut what is left into wood. The logged area is comparatively a small one and will not take much trouble or expense to clear up, so the fire menace is reduced to a minimum.

Two sample plots of $\frac{1}{4}$ -acre each were taken to show graphically the present conditions in "waste in logging" and the reproduction on "recently cut-over land."

The following table was made from the data secured on the plot showing waste in logging:

The lumber mills of the future will be small and limited in their production, if our young forests are not protected now.

THE CALIFORNIA WHITE PINE COMPANY.

This company has contracted to cut 2,840 acres of timber in the vicinity of Spring Garden, Plumas County. A logging camp giving employment to 60 men is located $1\frac{1}{2}$ miles from Spring Garden, at an elevation of about 4,000 feet. The sawmill is located at Loyalton.

Type.

The sugar pine-yellow pine type prevails throughout this area. White fir, Douglas fir, and cedar are found in association. The stand as a whole is a very good one estimating in the neighborhood of 26,000 per acre. This type of timber is similar in all respects to the sugar pine-yellow pine type of forest so prevalent in this region. With the exception of the cedar, the timber is straight, has very little taper and is of good quality.

The California White Pine Company has logged in this region for but a few months and no fires have occurred in that time. The company is very particular concerning fire; has its donkey engines equipped with good spark-arresters and in general is very careful. The men have strict orders to stop work and put out all fires which they start.

The forest cover consists chiefly of manzanita, buckthorn, thimble berry, chinquapin, oaks and squaw carpet. The ground cover in the virgin forest is good, consisting of duff, humus, needles, ferns and numerous herbaceous plants. The ground cover is kept fairly moist and is decomposing well, making a very good bed for seed germination.

Logging.

The donkey logging system is used. This system necessitates considerable damage to young growth, but the company is taking no pains whatever to avoid unnecessary injury. They are particularly careless in felling, and many trees are smashed. Naturally, many seedlings are destroyed. An approximate diameter limit of 12 inches on the stump has been established and logs to a 12 inch top diameter are taken. As a rule all logs possible are cut 32 feet in length and later bucked into 16 foot lengths at the mill. The logging system is one of clear cutting rather than of selection, and the cutting area, with the exception of the cedar, becomes denuded.

In spite of the fact that a small diameter limit has been established, considerable young growth is present. But all the cedar is left. Cedar will figure strongly in the second crop unless more seed trees of the more merchantable species of pine are left. It is advisable, therefore, that the diameter limit should be raised, say, to 18 or 20 inches. A large per cent of the damage to the young growth could be avoided with a little care.

The chief examples of waste noted on this company's logging operations are: smashed tops due to falling, tearing up of the ground by donkeys, and the injury to young trees and seedlings. This, in many cases, is unavoidable but more care should be taken in felling the timber.

This company, not owning the land which it is logging, is paying no attention to the piling and burning of the logging debris. Consequently, the area will be in bad condition for fires in another season unless the brush is piled and disposed of. The Roberts Lumber Company, when issuing contracts, should make a proviso compelling these small companies to clean their logged areas. These areas are small and could be cleaned of all fire menace in a short time and at little expense. This is urgent, for the Roberts Lumber Company's timber tracts are scattered in small blocks all over the county. To leave logging debris not only increases the fire menace on their own property, but endangers adjoining government timber and private holdings as well.

A sample plot of $\frac{1}{4}$ -acre to show waste in logging was taken on a representative area on the California White Pine Company's logging operations to show more clearly the conditions as they actually exist.

LOCATION—SPRING GARDEN.

Plot No. 2; $\frac{1}{4}$ acre.

Stumps			Unused top		Unused merchantable sections		Trees over 6 inches in diameter		
Species	Diameter (inches)	Height (feet)	Total length of top (feet)	Diameter at butt (inches)	Diameter at butt (inches)	Length to 6 inch diameter (feet)	Species	D. B. H. (inches)	Condition
Sugar pine	15	3.4	-----	12	12	8	Cedar	42	Good.
Douglas fir	24	2.6	58.6	18	18	36	Douglas fir	16	Good.
White fir	20	3.2	Badly smashed	-----	-----	-----	Douglas fir	28	Good.
Sugar pine	30	2.5	Smashed	18	18	Smashed	Douglas fir	18	Good.
Sugar pine	32	2.7	Smashed above	-----	-----	-----	-----	-----	-----
			18 feet	17	17	18	Cedar	16	Good.
Douglas fir	14	3.4	Smashed	10	10	Smashed	Cedar	42	Good.
Douglas fir	30	2.6	Smashed	20	20	Smashed	Cedar	31	Good.
White fir	24	2.4	Smashed	13	13	Smashed	Cedar	46	Good.
Douglas fir	14	2.8	16.4	8	8	-----	-----	-----	-----
Douglas fir	28	2.6	47	14	14	30	Sugar pine	22	Good.
									Good.

The reproduction and second growth of cedar, white fir and Douglas fir is plentiful, though the original stand was composed chiefly of sugar and yellow pine. Present indications are that the next crop will be composed chiefly of cedar, as this species is not cut at all.

The California White Pine Lumber Company's sawmill at Loyalton is a modern one in every way. One noticeable fact in looking over this mill was that very little timber is wasted. All edgings or slabs coming from the saw and edges are manufactured into lath and fruit boxing strips. In other words, all such material that will possibly make a lath is used. The 1 inch edgings coming from 1 inch lumber is used in the making of six foot strips. There is considerable use for this product in packing fruit. Thus, this company has partially, if not entirely, solved the slab and edging question.

This company is seriously handicapped in the transportation of logs to the mill. This is accounted for because of the building of the Western Pacific Railroad. Originally, the Boca and Loyalton Railroad was the only railroad operating in this county and, consequently, this was the only means of transportation. The mill, therefore, was built at Loyalton. Logging operations have been moved away from the center of activities from time to time, and at present the logs are handled in the following manner: They are hauled from the Spring Garden camp to Spring Garden and there switched to the main line of the Western Pacific Railroad. From here they are hauled to Portola. The Boca and Loyalton joins the Western Pacific at Portola, so the logs are then hauled to the mill at Loyalton by this railroad. The transportation question is an expensive one but unavoidable.

Waste in Logging.

(Roberts Lumber Company.)

In general, the chief waste in logging of this company when operating was that of leaving chute poles in the woods. Unusually long chutes were used by this company and they still remain in the woods. Another waste may be noted in the form of unused material. Many tiers of 2 foot wood still remain as originally piled. This is due, undoubtedly, to the hurry call to cease logging. Poor management is also responsible for several thousand feet of merchantable logs which were left when operations ceased. Approximately 40 acres is in this condition. The timber was felled, and bucked into logs, and these still remain in the form of waste. With the unlopped tops, such a condition leaves the area in a bad condition for fire.

In the vicinity of Lewis' old sawmill several high stumps were noticed. Some of these stumps were 5 and 6 feet high.

Disposal of Slash.

(Roberts Lumber Company.)

The Roberts Lumber Company did not pile or burn its slash. However, the area is free from all such debris because of the cutting into wood of all tops and branches. Tops and branches still remaining are few and scattered, and are decaying very rapidly. The company pursued a policy of close utilization and all trees were cut to an 8 or 10 inch top diameter.

With reference to the two contracting companies cutting Roberts Lumber Company's timber, no disposition is made of the debris.

Grazing.

The Roberts Lumber Company leases its cut-over land for grazing purposes. A policy similar to that of the United States Forest Service has been adopted which prevents over grazing. Practically the entire area near Loyalton is used for this purpose.

Conclusion.

The most important condition to consider on the Roberts Lumber Company tract is that of disposal of new slash. This company will undoubtedly issue many more contracts for the removal of its timber and should compel the cleaning of the area of all debris after logging. The old cut-over area, with few exceptions, is cleaned of all debris at present, so there is no danger from fire from that source. It seems advisable that a patrolman should be employed during the fire season at least, or the company could cooperate effectively with the United States Forest Service, which has a patrolman in this locality.

Natural reproduction is excellent in this locality, and, if protected, would insure a good second crop.

THE YOSEMITE LUMBER COMPANY.

In General.

The Yosemite Lumber Company owns approximately 8,000 acres of forest land in Mariposa County, of which about 1,000 acres have been cut over. The entire tract is situated on the watershed of the Merced River just west of the boundary of the Yosemite National Park. A part of the holdings lies within the boundaries of the park. The elevation ranges from approximately 5,000 feet to 6,500 feet. The slopes vary from moderate degrees to very steep, becoming almost precipitous as they approach the canyon of the Merced River.

Type.

The sugar pine type predominates throughout the tract. At altitudes below 5,500 feet elevation this type is modified by a greater abundance of western yellow pine. The majority of the tract, however, lies above the 5,500-foot level. White fir and incense cedar are conspicuous over much of the area although the latter is found in its greatest abundance on the lower elevations.

The stand, as a whole, is dense, there being occasional open patches of dense manzanita and buckthorn. On an average, the whole tract will run about 30,000 board feet to the acre and very nearly half of the entire stand is sugar pine.

Fire.

The company has been fortunate in having had but one fire on its holdings since operations were begun. This fire burned over a portion of the cut-over land and was extinguished before much damage was done. A forest fire burned through the entire tract many years ago and the result has been the retarded and poor development of many of

the trees. In many cases the butt logs are practically worthless due to fire damage occasioned during the young life of the trees.

The company is endeavoring to protect the land so far as possible without entailing additional cost. Oil is used as fuel for the locomotives, and the donkey engines, although wood burning, are equipped with spark-arresters. The company maintains no fire patrol. The region is one which, by virtue of its location and condition, warrants special precautionary provisions against forest fires.

Disposal of Slash.

The unused tops and branches are not piled and burned; but much of this material is utilized as cordwood. Below the railroad the slash is dense and constitutes a decided fire menace, while above the tracks much of the material is cut into cordwood and hauled to the engines.

Forest Cover.

The following species constitute the prevailing forest cover: manzanita, buckthorn, deerbrush, scrub oak, hazel, chinquapin, gooseberry, dogwood, wild rose, and thimbleberry. Manzanita and buckthorn grow in dense thickets in the openings and there retard, materially, the reproduction of the commercial species. With this exception, the forest cover has but little effect upon the young tree growth.

Ground Cover.

The ground cover is exceptionally good in the virgin timber. A thick layer of humus consisting of decaying wood, needles, ferns, and grasses forms a very good seed bed throughout the area. The fortunate absence of fires in the cut-over portions has resulted in the accumulation of a good leaf mould, and, consequently, a favorable seed bed.

Logging.

Power logging is employed and is made necessary by virtue of the roughness of the country. The logs are hauled down, by means of dry chutes and cables, to the landings where they are loaded on to cars and hauled down a broad gauge railroad to the top of a hoist 8,000 feet in length. Here the loaded cars are let down, one at a time, to the Yosemite Valley Railroad tracks, 3,100 feet below, and thence to the saw mill at Merced Falls. The mill cuts on an average of 150,000 board feet per day.

Sugar pine and white fir constitute the majority of the present cut. Practically every tree is cut from which a log can be taken and no diameter limit has been established. Most of the young trees remaining are injured and reproduction is badly retarded by careless skidding. However, if fires can be kept out of the cut-over areas, it is safe to assume that there is sufficient reproduction to produce a fair future stand of timber. If a second crop is contemplated (and it should be, since the area is typical forest soil) it is essential to establish a diameter limit of cutting, suitably 18 inches, and to leave a greater number of seed trees. These features, together with a method of protection both from fire and injury during logging operations, will greatly favor the production of a second crop.

The result of good logging in a yellow pine forest. Tops and large branches were converted into cordwood and the remaining debris burned. Seed trees have been left to restock the area and small trees were left for future marketing.

Waste in Logging.

This company is pursuing the policy of close utilization. Stumps are cut down to a height of about 2.5 feet and the trees are used up to a diameter of from 8 to 10 inches. With the exception of the material left as slash below the railroad, little merchantable material is wasted.

Conclusions.

The Yosemite Lumber Company is not practicing conservative forestry. No plan of future management is contemplated and the present cutting is being conducted without regard to the possibility of a future cut or the production of a second stand. The fact that no damaging fires have occurred on the cut-over areas owned by the company is merely good fortune and is not at all significant of the actual present demand for protection. Much of the slash is used for firewood, but that allowed to remain still constitutes a fire menace worthy of consideration.

RAILROAD RIGHTS OF WAY INVESTIGATION.

One of the first problems with which the Board of Forestry has to deal is the problem of protecting the natural and vital resources of the state from fire.

The sources from which fires emanate are numerous. It is a generally accepted fact that many fires may be rightly attributed to carelessness on the part of one individual or another, along the railroad rights of way; and an investigation has been made to determine, as accurately as possible, the relation of railroad rights of way to the fire problem. This investigation has been a general one; the rights of way between San Diego on the south and Yreka on the north having been carefully covered. Owing to the barren character of certain areas through which some rights of way pass, such roads have not been considered dangerous, and, consequently, not covered.

Observation has been made of the conditions existing along the railroads. Conference with the officials of railroad companies, when such was possible, has added information of material value to the investigation. A report of these conferences, together with the observations made, is hereby submitted.

The investigation started June 7, 1913, that date being twenty-four days later than the date recognized in California as the beginning of the fire danger season, namely, May 15th. By the middle of May much of the grass on the hills and in the valleys of California becomes inflammable. This danger increases as summer advances and continues until about the middle of October. Showers are then to be expected.

One who has traveled extensively in the state and has been at all observant, is undoubtedly familiar with the grassy covering so generally characteristic of the conditions along railroad tracks. On all excepting desert areas, grass of some variety is bound to be present in greater or lesser abundance along the cleared rights of way. This grass, drying rapidly after maturity, remains as a menace to adjacent areas.

Endeavoring to classify the sources from which fires may originate along railroad lines the following scheme presents itself:

1. Sparks scattered from the stacks of engines.
2. Live cinders deposited on the track when the fire-box is cleaned.
3. Burning oil dripping from the fire-box.
4. Burning wheels caused by brake friction on grades.
5. Lighted matches and cigarettes thrown from trains by passengers.
6. Inadequate supervision and control during burning of right of way, together with absence of a systematic method.
7. Campers, hunters and tramps.

Of the seven, four would start fires not farther from the track than fifteen feet. These are 2, 3, 4 and 5. Experiments have been made along the Pennsylvania Railroad proving conclusively that sparks from locomotives can be thrown one hundred feet and still retain life sufficient to ignite very dry and inflammable grass. Consequently, giving

this conclusion due consideration, the danger from class 1 can be eliminated by either of two methods—

1. By the disposal of all inflammable material within a distance of one hundred feet on both sides of the track.

2. By the application of thoroughly efficient spark-arresters and spark-deflectors.

Owing to the fact that clearing a strip one hundred feet on both sides of the track is expensive, more than should be expected and impracticable, it is evident that efficient spark-arresters and deflectors must be introduced as essential parts of any remedy suggested.

Concerning a remedy for class 6 much may be said. First, it may be pointed out that several very destructive fires have had as their origin the carelessness, inadequate force of men, and improper judgment of section crews whose duty it is, under the present system, which, undoubtedly, is undeserving of the name, to burn the rights of way. Furthermore, there is no systematized supervision of this work. To each section boss there is apportioned a certain stretch of track. At his convenience and, unfortunately, under his oftentimes inexperienced control, this work is done. Certainly the rights of way should be cleaned. Without doubt the most economical method of eliminating inflammable material is by burning.

Grazing cattle or sheep on the right of way can not be expected to prove satisfactory; first, because the measures necessary to make this practice safe render it very expensive and impracticable; second, after grazing the grass will rapidly grow again inasmuch as the roots remain uninjured. Burning, on the other hand, has a marked effect on the roots and, if thoroughly done, will retard repeated growth for the season. Nevertheless, burning under the present method is apt to be dangerous, and when the hazard of a remedy becomes so great as to defeat its purpose, it can not be denied that efficiency is lost and the remedy is one only in name. A few of the more recent fires undeniably attributable to careless burning are tabulated as follows:

Initials of railroad	Place	Area damaged, acres	Character of area damaged	Date	Ownership
S. P. R. R. ---	Near Riverside --	60	Pasture, chaparral -----	June 13	Private.
S. P. R. R. ---	Near Stockton --	100	Grain -----	July 12	Private.
W. P. R. R. ---	Near Oroville --	20	Vineyard -----	June 13	Private.
N. W. P. R. R. ---	Near Ukiah ----	20	Pasture -----	June 13	Private.
S. P. R. R. ---	Near Felton ---	300	Chaparral -----	July 13	Railroad and private.

This merely cites a few fires, which, we have full reason to believe, could have been avoided.

Recognition is given the fact that some railroad companies do make expenditures for the prevention and suppression of fires.

Arranging the companies with respect to the work done in proportion to their total mileage they appear in somewhat the following order

(only such roads as are doing enough fire prevention work to warrant recognition are named) :*

Yreka Railroad Company.	Atchison, Topeka and Santa Fe
Southern Pacific Company.	Company.
Northwestern Pacific Company.	Western Pacific Company.
Butte County Railroad	Pacific Electric.
Company.	Northern Electric.

The railroad companies coming under the investigation are:

Atchison, Topeka and Santa Fe.	Northwestern Pacific.
Boca and Loyalton.	Pacific Electric.
Butte County.	San Diego and Cuyamaca.
Lake Tahoe.	Sierra and Mohawk.
McCloud River Railroad.	Southern Pacific.
Nevada California and Oregon.	Western Pacific.
Nevada County Narrow Gauge.	Yreka Railway.
Northern Electric.	

The work now being done is, doubtless, instrumental in preventing many fires. However, as this report will point out, the work is not fully organized and system is lacking in its execution. To this there are one or two exceptions—mentioned later.

Under the present management fire guards are constructed at intervals, either hoed or plowed, on an average of thirty feet from the track. These lines average from two to four feet in width. One section boss will construct these guards within his section and burn immediately; another follows the practice of clearing the fire guards as he proceeds with the burning; some fail to construct guards altogether, while others have their guard lines cleared some time before the grass is dry enough to burn clean.

*This does not include railroads not covered by the investigation.

This view, taken from the railroad, shows a charred grain field where thousands of bushels of standing grain were destroyed by a fire which originated on the railroad right of way.

Recommendation.

In order to insure prevention from fires originating from the classes 2, 3, 4 and 5, no better method could be followed than that of constructing continuous fire guard clearings to be completed by May 15th and thirty to fifty feet from center on both sides. After this date very little grass will grow on the cleared lines. As summer advances burning may be done under capable supervision and under orders of an experienced man.

Campers, Hunters and Tramps.

Here the problem is one which can not be dealt with within a certain prescribed area. During the investigation it was found that this source of fire is one of the most important with which the railroad companies have to deal. It is not possible to keep a tramp within thirty feet of the track. Hunters and campers are included in this heading merely as possibilities. Notwithstanding the fact that many fires start from carelessness of tramps not directly upon the right of way, it appears just that the railroad should be held responsible for any element acting against the public welfare and whose itinerary is determined by the rights of way. Railroad patrols established along rights of way throughout the state, to work in cooperation with all protective associations, would decrease the danger from fires emanating from such a source. However, the danger from fires being started by tramps will not be greatly diminished until effective measures are taken to decrease the number of tramps. Major Pangborn made a study of the tramp problem in its relation to railroads in the United States. He gives as a minimum figure 430,000 tramps following the railroad lines: "The surest way of decreasing the mobility of the tramp is to stop his beating his way on trains. It is strange that the railroads do not unite in a common policy for this purpose * * *. A system of railroad police could not only patrol railroad property, but also adjacent territory now infested with hobo camps * * *. Check beating railroads, abstain from feeding at the back door, establish state or district work colonies and the tramp will disappear."*

Railroads.

Southern Pacific Company.

From Sacramento north, via Marysville, the right of way extends through a valley which is characterized chiefly by grass, grainfields and occasional orchards. Considerable precaution is warranted owing to the rapidity with which fire spreads and the great damage liable to occur in grainfields ripe for harvesting. The character of the area remains unchanged until at Kennett brush and chaparral is encountered.

The company has done good work in constructing fire guards south of Redding along this route. About half of the required burning has been done. As the area becomes one of chaparral, fire danger, in a sense, increases. Frequent grassy spots are found along the track and occasionally timber, which forms a rather scattered covering on the canyon slopes, extends down to the right of way. Evidences of fire having burned close to the track are frequent and conspicuous. The chaparral forms a heavy growth continuing up the slopes to the timber. Little prevention work is done by the company; fire lines are not made systematically and the grassy spots are burned by the United States Forest Service at federal expense. A fire train ready to report to fires along the right of way through the canyon is maintained by the railroad

*Mr. Arthur J. Todd in The California Outlook, July 26, 1913.

company and stationed at Dunsmuir. This approach to systematic work is certainly worthy of commendation. Under Federal supervision mounted patrols are maintained whose duty it is to cover the canyon district. These patrols are paid by the government.

Grass again predominates north of Edgewood. The adjacent area is, for the most part, pasture land. Fire lines are made and some burning has been done, but the impression is given that thorough work is not the object.

McCloud River Railroad.

This road operates trains between Sisson and Slagger Creek, a distance of about thirty-five miles. The railroad extends through a region of chaparral, cut-over land and timber; parts of the right of way are in open fields where grass is abundant. Not much is done by the company to insure safety from fire.

Yreka Railroad Company.

Mr. W. B. Rider, supervisor on Klamath National Forest, speaks appreciatively of the excellent cooperative work done by the Yreka Railroad Company. This road operates between Montague and Yreka through an area of heavy grass. At a distance of thirty feet from the center of the track continuous fire guards are plowed, three furrows in width. That these guards are completed prior to the fire danger season, or very nearly finished by that time, is a fact deserving special merit. As the grass becomes more inflammable the thirty foot strips are burned. This plan is practiced each year and no fires have occurred along this right of way.

The engines on this railroad burn wood. This condition of the right of way greatly increases the chance of fires being started by locomotives.

Southern Pacific Company.

Valley conditions exist from Tehama to Suisun via Willows, pasture land and grainfields constituting the greater portion of the area adjacent to the right of way. Here evidence was suggestive of precautionary measures taken by the railroad. The fire guards were well constructed and the burning, much having been done, was thorough.

The general impression, obtained from interviews with station agents, trainmen, and section bosses, was satisfactory and to the effect that few fires now get beyond control of the burning crews.

Approaching San Francisco Bay, with few exceptions, the railroad lines traverse an area, irregular in boundary, and characterized by level reaches of semi-swamp land upon which tules grow in rank abundance. During the early and middle summer no danger from fire exists on areas covered by this form of vegetation. However, in the fall, when the tules are dry, the company follows the practice of burning all material within an average distance of fifty feet from the track.

Suisun lies on the eastern edge of the tule land. Branching north, the Southern Pacific line passes along the boundary of this area, soon leading into the hills where, immediately, the grass characteristic is encountered. Through the Napa Valley, a region extremely fertile and producing abundant crops of hay, grain and grapes, the right of way

The owner whose grain field lies adjacent to a railroad right of way is forced, at times, for protection to his crop, to plough wide strips between the railroad tracks and his ripe grain.

again presented signs of apparent neglect. Cases were numerous where owners of hay and grain had plowed wide strips between their crops and the railroad. These conditions were observed to Calistoga. On the electric line from Calistoga to St. Helena no precaution had been taken. This is significant, especially as the covering of grass was heavy and already decidedly dry. Furthermore, the adjacent area is chaparral. Should a fire start on the right of way there is no means by which it could be kept from spreading up the slope to the chaparral and hence to unbounded brush covered hills.

Recognition is given the good work done by the Southern Pacific Company between Napa Junction and Santa Rosa. Fire guards are well constructed and satisfactory burning being done.

Northwestern Pacific Railroad Company.

Grass predominates between Santa Rosa and Willits, with occasional patches of timber traversed north of Ukiah. Chaparral is abundant north of Calpella. Apparently systematic method is employed by the

company through this region. With the exception of small stretches, fire guards are well and continuously constructed. Much of the burning also has been done.

Dangerous conditions exist between Santa Rosa and Sausalito via Monte Rio and Tomales Bay. In the accompanying table the character of the area, etc., is shown. Along the Russian River there are many summer resorts. Small vacation towns are scattered thickly throughout the canyon. Should a fire break out great damage would undoubtedly be done, owing to the thick and unbroken growth of chaparral and timber. It is sufficient to state that very little is done in this vicinity to prevent fires along the railroad. Neglect, such as is evidenced here, if permitted to continue, will doubtless result in disaster. A point is claimed by the officials on the ground that few fires have occurred in recent years. Granting this, the investigation must hold that such is not due to preventive measures taken. Furthermore, it must be kept in mind that no efficient fire protective scheme can be based upon the element of chance. Between Point Reyes and Sausalito the right of way passes through hills heavily covered with grass and chaparral. Redwood timber is abundant in the canyons. The road follows around the north side of Mount Tamalpais through an area well settled and densely wooded. Little is done by the railroad to prevent destruction by fire on the north side of the mountain similar to what has so recently occurred on the south side.

Western Pacific Railroad Company.

Leaving Oakland the Western Pacific encounters the prevailing grass covered area immediately. Seldom is the broad rolling expanse of pasture land broken by patches of chaparral. The region is chiefly valuable as stock range.

Mr. J. J. Callaghan, secretary of the Stockmen's Protective Association of Livermore, speaks well of the cooperation given by the railroads. The association has a membership consisting of ranchers owning range within Alameda and San Joaquin counties and others owning range within a convenient distance for patrol. There are 250,000 acres, mostly range land, represented in the association. The purpose of this organization is to provide for fire prevention and suppression in this vicinity, to give the small owner a voice through his association, and, to promote the idea of systematic protection. The association recommends five men each year to act as patrols over the area represented. These men are then appointed by the county supervisors; they are paid \$85 a month, receiving their salaries from their respective counties. Alameda County provides four patrolmen, while San Joaquin County maintains one. The area patrolled lies between Tracy on the east and the Santa Clara hills on the west. During the past three years a marked decrease in fire damage is attributed to this systematic patrol.

During the past six years the Southern Pacific and Western Pacific railroad companies have paid, as fire damages, the aggregate sum of \$30,000 in Alameda and San Joaquin counties alone. Cases are numerous throughout the state where civil suits have been filed against railroad companies for damage caused by fire originating along rights of way. Exact figures are very difficult to obtain in view of the fact that

action is not always taken, settlements are often slow to be made after decisions and sums are frequently paid voluntarily to cover damage done.

The general character of the area remains unchanged until at Oroville the right of way enters the Feather River canyon. From Oakland to Sacramento much has been done to render safe the condition of the right of way. However, there is seen occasional evidence of fire having spread beyond control during burning of the track area. Appearances are again most unfavorable from Sacramento to Oroville. With the exception of a very little burning, practically nothing is done.

Grass is allowed to remain on the right of way. The adjacent fields are largely planted to grain which is allowed to ripen before harvesting. In order to protect their crops from fire, many of the ranchers owning land adjacent to the railroad have mowed thirty foot strips immediately adjacent to the right of way.

Should fire start along the track on a windy day there is little doubt but that sparks would be carried across these mowed strips. A few miles west of Oroville a fire started along the railroad, spread beyond control and seriously damaged a grape vineyard. This fire occurred recently.

The problem in the Feather River canyon is a difficult one. Chaparral and timber characterize the region. Little is done in clearing the track of grass and, in many places, the amount of dead and down material is conspicuous. This undoubtedly should be piled and burned as it remains a menace to the adjacent timberland. There is an abundance of young tree growth close to the right of way. Grassy spots are frequent but no clearing has been done to prevent fires. A very commendable system employed by the company is the use of a printed card so arranged as to enable engineers to notify section crews of the location of fires. Upon the receipt of this notification the section boss is under orders to report at once to the fire with a force of men sufficient to extinguish it if possible. By this means a fire would be controlled during its incipient stage.

The card system is admirable and is deserving of much consideration. Although the conditions along the line are not what they should be, much of the hazard is obviated by this provision for quick action in case of fire.

On the front of the card appear instructions to section foremen as follows:

Go at once to the fire reported on this card.

Make out your report of the fire and send it with this card to your roadmaster at once.

The roadmaster then sends the card with the section foreman's report to the superintendent. Upon receipt of this information the superintendent makes immediate investigation of the fire, and reports the same along with the card and foreman's report to the claim agent. On the back of the card appears the following instruction to section foremen:

There is a grass fire at point indicated (the engineer discovering the fire indicates on the card its location).

Have section men sent to that point *at once* and extinguish fire without regard to whether it is on right of way or adjacent property.

Boca and Loyalton Railroad Company.

This road, having been operated largely for logging purposes, is now a common carrier and is affiliated with the Western Pacific Company. Trains operate between Olio and Boca, a distance of nearly forty-five miles. Part of this distance is cut-over land upon which young growth and slash form a dense cover through which fire will burn rapidly and with intense heat. Chaparral and timber frequently border on the right of way. There have been several bad fires along this railroad—the causes of which were not discovered. Conference with officials at Portola leads to the conclusion that few precautions are taken along the Boca and Loyalton track. Undoubtedly the region is one in which fire prevention should receive special consideration.

East of Portola there is a marked decrease in fire danger owing to the barren nature of the region.

Sierra and Mohawk, and Nevada, California and Oregon Companies.

Going over Chilcoot Pass and into Nevada these roads operating narrow guage lines have little to consider from the standpoint of fire danger. The area covered is strikingly barren, retaining this peculiarity to Reno, Nevada.

Reno is located on the eastern slope of the Sierra Nevada Mountains. The region is not one of excessive vegetation owing to the rather meager annual precipitation.

Southern Pacific Company.

Leaving Reno and beginning the ascent of the Sierras the Southern Pacific follows the Truckee River westward. Soon after crossing the state line the right of way becomes surrounded by brush covered hills. Grass growing in abundance covers the right of way. West of Truckee lie miles of snow sheds stretching through wooded mountains. Owing to the enormous expense entailed in the erection of these sheds, special provision has been made by the company for their protection. On Red Mountain a lookout station is located commanding an expansive view taking in the entire length of the snow sheds. Two watchmen are stationed at the lookout and have telephone communication with stations along the railroad. By this means a fire can be discovered and extinguished before much damage is done. Immediately, upon receiving information of a fire, the station agent summons a fire crew. This systematic effort to prevent fires is employed as far east as Truckee and as far west as Blue Canyon.

The Southern Pacific Company employs a general fire inspector whose duty it is to superintend burning. Mr. Niles Searles, now holding the position, freely admits that few systematic methods are in practice. The nearest approach to efficient systematic control is found in the lookout station on Red Mountain together with the maintenance of a fire train between Truckee and Blue Canyon. Here also may be mentioned the fire train maintained at Dunsmuir.

Lake Tahoe Railroad.

The road operates between Truckee and Lake Tahoe a distance of fourteen miles. Following close by the river all the way, the right of way is practically safe from fire since there is an abundant growth of

green shrubs and water plants. Excessive moisture prevents the drying of the vegetation; consequently, inflammable material is not abundant.

Nevada County Narrow Gauge Company.

From Colfax to Nevada City conditions are dangerous. Along the right of way of the Nevada County Narrow Gauge Railroad no measures are taken to prevent fires spreading. Grass is abundant along the track while chaparral and timber lie immediately adjacent. Provision for some action to obviate this danger should be made.

Regarding the condition existing between Colfax and Auburn little need be said. Extensive grading has been necessary for the double tracking and this work resulted in a rather completely cleared right of way. This fact, together with the many tunnels, renders the distance practically immune from fire damage.

Characteristic of the region between Auburn and Sacramento are the numerous orchards. Many are located along the railroad. Grass is present in abundance but the adjacent lands are cultivated close up to the right of way.

Approaching Sacramento, however, real valley conditions are again encountered. Here the company has done some burning and is constructing fire guards about 30 feet from the track. These are apparently not continuous.

Following the coast line of the Southern Pacific south from San Francisco to Los Angeles one is impressed by the unchanging character of the country. Grass predominates. In general, chaparral or light brush is to be seen at not a great distance from the train. Wide expanses of pasture land are numerous, broken on the slopes and ridges by scattered brushy vegetation. The grass, dry, and often quite thin, gives a parched and thirsty appearance to the landscape. Over these hills fire has often burned unchecked. The company is doing considerable work along its right of way to prevent fires. Quite systematic burning is done each year and the fire lines, for the most part efficient, are continuously made in sections demanding special precaution. Sections are omitted, however, which should be roughly guarded at least.

A heavy tangled cover of chaparral is characteristic of the mountains of southern California. This burns readily. In a short space of time vast areas may be fire swept leaving the steep slopes much impaired. Evidence of devastation by fire is conspicuous south of Santa Barbara. Although there is room for more systematized methods, the railroad company is prompt and willing to cooperate with state and federal agencies in preventing fires along its right of way. Unfortunately this can not include all the railroad lines operating in southern California. The prevailing sentiment in the region expresses a strong plea in favor of legislation designating a prescribed amount of work to be requisite and to be completed by the railroad companies on a specified date.

Santa Fe Company.

One of the most dangerous situations in the south is Cajon Pass. The Santa Fe Company is responsible for this right of way. There has been a recent attitude on the part of the company to neglect clearing the inflammable material from along the track through Cajon Pass. There is generally a strong air current passing through the canyon which

adds to the fire danger. The following is a significant report covering fires having occurred between San Bernardino and Barstow during the past five years:

Season	Cause	Number of fires
1909 -----	Railroad	8
1910 -----	Railroad	2
1911 -----	Railroad	3
1912 -----	Railroad	15

Investigation was made in each case and the cause undisputably attributed to the railroad. To June 27, 1913, no clearing has been done in Cajon Pass. Desert conditions prevail east of Barstow to the Arizona line.

Grass predominates between Los Angeles and San Diego. The Santa Fe road passes through a region rich in production of oranges, walnuts, olives, hay and garden crops, striking the beach north of Oceanside. The right of way follows the coast for miles. Pasture land is most in evidence on the north side of the track. Very little is done to prevent fires spreading in these pastures. Concerning the area from Del Mar to San Diego unfavorable report must be given. The region traversed is one of brush, grass and chaparral. Fire may readily spread from the railroad and result in considerable loss. Very little, if any, work is done by the railroad company to prevent this loss.

Between Fullerton and San Bernardino, the track passes through grass and brush covered hills. Here the company seems to have centered its fire prevention activity. Fire guard lines are constructed and a large portion of the right of way burned. This admirable work continues to Riverside. Then, again, neglect is apparent. The region between San Bernardino and Los Angeles is one of orchards and intensive cultivation and is rather free from fire danger. Broad reaches of wash, alluvial deposits from the mountain canyons present a semiarid appearance. The mountain range extends east and west with the southern slopes well covered with chaparral. In the more shaded canyons timber is found in exceedingly light stands. Although the San Gabriel wash (this is the greatest in extent) approaches a desert in appearance there is, nevertheless, a light continuous vegetation through which fire may slowly spread to the adjacent hills more heavily clad with brush and chaparral. Nothing is done to obviate this danger.

San Diego and Cuyamaca Railroad.

Extending northeastward from San Diego lies a right of way owned and operated by the San Diego and Cuyamaca Railroad Company. Because of the brushy nature of the region traversed by this road much care is warranted. Nevertheless, surprisingly few preventive measures are employed.

Pacific Electric Railway Company.

In the vicinity of Los Angeles electric lines are numerous, the system being, in fact, one of the most extensive of its kind in the country. These railroads although not possessing the peculiar danger from

sparks, as must be dealt with in a consideration of steam lines, must be regarded as a factor in the fire problem.

The electric lines branch in every direction passing through fields, orchards, residence sections, and even far into the wooded hills. In hill regions, where chaparral very generally grows close to the right of way, special care should be exercised to prevent fires starting from carelessness of passengers. This is true because the right of way, with few exceptions, is heavily covered with grass.

The Pacific Electric Company follows the practice of burning along their right of way. This work is done by means of a fire car so arranged as to catch with grass within a short distance from the track. The method could not be safely employed in a chaparral region. Consequently, the work is centralized along open stretches of track. Nothing is done to insure safety through the hills.

Southern Pacific Company.

Between Los Angeles and Vincent, a station situated on the edge of the Mohave Desert and at the base of the north slope of the Sierra Madre Mountains, chaparral and grass predominate. Over this territory the railroad company has done excellent work. Fire guards, wide enough to be efficient, have been completed and are continuous on both sides of the track and from fifty to sixty feet distant. What burning has been accomplished is thorough.

Desert conditions prevail between Vincent and Warren. Beginning the ascent to Tehachapi Pass, grass and a light cover of brush are the characteristic form of vegetation. Some work has been done by the railroad in this locality, but opportunity still remains for further and more systematic effort to prevent fires.

Dropping down into the San Joaquin Valley the right of way again stretches through broad areas of pasture land, occasionally bordering large fields of grain. From Bakersfield to Sacramento the character of the area traversed by the railroad remains practically unchanged. Grass predominates while the absence of brush is very marked. Comparatively little is done on the right of way. Rather inefficient fire guards are hoed at an average distance of 30 feet from the track. Portions of the right of way have been burned. North of Lathrop, however, there is repeated evidence of fire having spread beyond control of the burning crews.

From Bakersfield the Southern Pacific operates a branch road to Coalinga. The latter is a region rich in its production of oil. Approaching the oil district, and continuing to the city of Coalinga, hundred foot strips are cleared on both sides of the track. This clearing is made down to the mineral soil, no vegetation being allowed to remain. This work is done by the railroad company.

The Butte County Railroad.

Operates between Chico and Stirling City. Fully one-half of the distance is characterized by a relative abundance of forest vegetation; a heavy growth of grass connects the right of way with the adjacent chaparral and timber. An attempt is made by the company to keep the right of way cleared of inflammable material, the grass is hoed away from the track annually; but this has little effect in keeping fires within the right of way. Portions of the road are burned by

the section crews. Fire guards are not given sufficient attention; consequently, what burning is done carries with it considerable risk. The total distance is thirty-one miles. Stirling City is situated at an altitude of 3,500 feet above sea level while Chico lies at an elevation of but 51 feet. There is a maximum grade of 5 per cent. Very few fires have been attributed to the railroad; however, the condition of the right of way will warrant its being placed under a systematic scheme of protection.

Northern Electric Railroad.

A well organized electric system and a common carrier road is operating between Sacramento, Chico, and Oroville. The power is taken from a third rail and the contact often occasions flashing sparks. Valley conditions predominate; in fact, brush and chaparral are not present in the region traversed by this railroad. Extensive grain crops are produced on land adjacent to the road and, during the summer, fire danger is emphasized here as throughout the valley. Little is accomplished in the way of securing absolute safety from fire along the Northern Electric tracks.

Conclusions.

Having thus covered the greater part of the railroad rights of way in the state and the above observations having been made, the following conclusions are formed:

First—Fires do originate, not infrequently, along railroad rights of way.

Second—Owing to remoteness many of these fires may spread unchecked for hours before discovery, consequently rendering the task of control more difficult than if immediate action were taken.

Third—Some railroad companies are doing more than others to prevent and suppress fires along their right of way.

Fourth—No railroad company is doing all that it should do to prevent and suppress fires along its right of way.

Fifth—With but few exceptions, fire prevention work done by railroad companies is incomplete and unsystematic, thereby, in many cases, defeating its own purpose.

Sixth—It is possible, with systematic and efficient work, to avoid many of the fires which can occur under the present methods.

Seventh—The railroad companies, with few exceptions, are paying out annually for fire damage enough to add materially to a well organized fire prevention system.

Eighth—Danger exists in the valleys as well as in mountainous regions.

Ninth—Railroad rights of way do form an important factor in the fire problem of the state.

Recommendations.

From the above conclusions it is not difficult to detect very apparent need of remedy. A very simple analysis of the situation demonstrates clearly the fact that, lack of efficient work, non-application of systematic methods and, at times, apparent neglect result primarily from freedom to do or not to do the work. The matter is left to the discretion of the railroad companies except on portions of rights of way which traverse Government Reserve. Even here much leniency is given and, unfortunately, at times, abused.

In order to secure adequate protection along railroad lines throughout

the state it is hereby recommended that legislative measures be enacted as follows:

Railroad Fires.

Section —. It shall be the duty of all railroad corporations or railroad companies operating any railroad within this state to keep their railroad track, and either side thereof, for a distance of one hundred (100) feet on each side of the track or roadbed, so far as it passes through any portion of this state, free from dry grass, weeds or any inflammable debris; and any railroad company or corporation failing to keep its railroad track and each side thereof free as above specified, shall be liable for any damages which may occur from fire emanating from the operation of such railroad, and a neglect to comply with the provisions of this section shall be prima facie evidence of negligence on the part of any such railroad company or corporation. But no railroad company or corporation shall be required to keep free as above specified any land not a part of its right of way.

Forest fires are frequently attributable to railroads. Here is one of the reasons for it.

Section —. Hereafter all companies, corporations, or persons engaged in operating any railroad wholly or in part in this state, shall be liable for the destruction of, or injury to, any property, real or personal, which may be caused by fire, or result from any locomotive, engine, machinery, train, car, or other thing used upon said railroad, or in the operation thereof, or which may result from or be caused by any

employee, agent or servant of such corporation, company or person upon or in the operation of such railroad, and the owner of any such property, real or personal, which may be destroyed or injured, may recover all such damage to said property by suit in any court, in the county where the damage occurred, having jurisdiction of the amount of such damage, and upon the trial of any such action or suit for such damage it shall not be lawful for the defendant in such suit or action to plead or prove as a defence thereto, that the fire which caused such injury was not the result of negligence or carelessness upon the part of such defendant, its employee(s), agent(s), or servant(s); but in all such actions, it shall only be necessary for the owner of such property so injured to prove that the fire which caused or resulted in the injury originated or was caused by the operation of such railroad, or resulted from the acts of the employee(s), agent(s) or servant(s) of such defendant and if the plaintiff recover in such suit or action, he shall also recover costs, the same to be ascertained from the evidence in the case by the court or jury trying the same. Provided, that the penalty prescribed by section — of this act shall apply only when such employee(s) agent(s) or servant(s) is in the discharge of his duty as such; and provided further, That said action for damages be brought by the party injured within two years next ensuing after it accrues; and provided further, that the liability herein imposed shall inure solely in favor of the owner or mortgagee of the property so damaged or destroyed by fire; and the same shall not pass by assignment or subrogation to any insurance company that has written a policy thereon; and provided further, that nothing in this act shall be held to apply to or in any manner affect any right which has accrued prior to the passage hereof or any suit now pending.

Section —. It shall be the duty of every railroad corporation or railroad company operating any railroad within this state to plough as a fire guard not later than July first (1st) of each year, upon each side of its line of railroad, a continuous strip of not less than six (6) feet in width, which said strip of land shall run as near as possible parallel with said line of railroad, and be ploughed in such a good and workmanlike manner as to effectually destroy and cover up the vegetation thereon and be sufficient to prevent the spread of fire, and in addition thereto every such railroad corporation or railroad company shall cause to be burned, not later than August first (1st) of each year, all the dry grass and other inflammable vegetation lying between the said ploughed strips and the track of said railroad; and the outer line of said strips of ploughed land shall be upon the outer line of such railroad corporation or railroad company's right of way, or if upon land owned by said corporation or company, one hundred (100) feet on either side from the center of the track or outer track; provided, that such fire guard so to be ploughed need not be constructed within the limits of any town or city, nor along that portion of a railroad which runs through rough mountains, or on other lands where ploughing would be impracticable; but that the provisions herein respecting the burning of a strip on each side as above specified shall be duly conformed with whenever any vegetation is found along such line of road; and provided further, that this shall not apply to logging railroads which are not operated as common carriers.

Section —. Any railroad corporation or railroad company failing to comply with the provisions of section — of this act shall be liable to pay a penalty of two hundred (200) dollars for each and every mile or fractional part thereof of such strip of land as it neglects to plow on either side of the line of its railroad in this state, in each and every year as aforesaid, the same to be collected in an action of debt in any court of competent jurisdiction, in the name of the people of the State of California, and when collected it shall be paid into the school fund of the county wherein the cause of action accrued; and provided, that the said action shall be brought within three years next after it accrues.

Section —. Every railroad corporation or railroad company operating any railroad or part thereof within this state shall, subject to the approval of the State Board of Forestry, equip and maintain in good condition an efficient spark-arrester and a suitable ash-pan on every locomotive engine owned or operated by such corporation or company, except such engines as are operated by oil fuel or electricity; and shall

require its employees operating such engines to exercise sufficient care to keep such devices in good order to prevent the escape of live coals or sparks which may cause fires along the right of way; and any such corporation or company failing to comply with the provisions of section — of this act shall be guilty of a misdemeanor, and upon conviction thereof be punishable by a fine of not less than twenty (20) dollars nor more than one hundred (100) dollars for every offense thus committed.

Section —. Each railroad corporation or railroad company owning or operating a railroad wholly or in part within this state shall be responsible in damages to every person and corporation whose property may be injured or destroyed by fire communicated directly or indirectly by any of the locomotive engines in use upon the railroad owned or operated by such corporation or company, and each such railroad corporation or railroad company shall have an insurable interest in the property upon the route of the railroad owned or operated by it and may procure insurance thereon in its own behalf for its protection against such damages.

California's mild climate is conducive to the welfare of the "floating population," and each summer finds hundreds of tramps following the railroad tracks. Unless the rights of way be cleared of all inflammable vegetation, the danger from the tramp's cook fire will remain great.

Section ---. On and after July first, 1915, and each succeeding year, any person, firm or corporation cutting wood or lumber on property adjacent to the right of way of any railroad within this state shall dispose of the slash caused by such cutting in such a manner that the inflammable material shall not remain on the ground within

twenty-five (25) feet of any railroad right of way. Any operator of wood or timber on such land, or any owner of such land where cutting is done may be fined not more than ten dollars (\$10) for each acre of such land or fraction thereof from which the inflammable material is not properly disposed of within sixty (60) days from the cutting of the trees or brush thereon; provided, that any owner or operator who cuts wood or timber during the winter, after November first (1st), shall have until May first (1st) next succeeding to remove the slash in accordance with the provisions of this section; and provided further, that, if such slash is destroyed by burning, such burning shall be done in accordance with the forest laws of the State of California.

It is further recommended that the following rules be adopted, and that all railroad companies operating any railroad within the state shall:

1. Maintain an office of general fire inspector who shall be a competent man with an organized force working under his supervision.

2. To lend all possible aid in extinguishing fires adjacent to the right of way.

3. To maintain patrols through areas densely wooded, such patrolmen to be recommended by the State Board of Forestry and given authority as state firewardens. These men shall be paid by the railroad company whose right of way they patrol.

4. To submit annual reports to the State Board of Forestry not later than August 15th of each year, giving total mileage owned and operated and the total mileage cleared, and the reasons for any discrepancy.

The investigation has not taken up the study of logging railroads. These, undoubtedly, play an important part in the fire problem. Where such roads act as common carriers they should be subject to all regulations governing trunk lines.

FOREST FIRES, 1913 AND 1914.

Although the citizens of California recognize the magnitude of their forest wealth and its bearing upon the industrial activity in every community, there has been an evident unwillingness on the part of many to realize the importance of adequately protecting our forest areas from fire. California ranks third in her timber supply. There are within the state vast areas of valley and hill land directly dependent upon an already limited water supply. Thousands of acres of brush and timber land throughout the state serve as indispensable regulators of stream flow, and each year our watersheds suffer serious damage from the ravages of fire. This destruction will continue until measures are adopted to prevent it. We, as citizens of California, must face the fire problem squarely and admit as positive the following facts:

1. That forest fires do occasion a very great annual loss in dollars and cents.

2. That all of our industries depend directly or indirectly upon the forests and streams.

3. That we can not afford to permit the annual loss to continue.

4. That we have not given this great problem a fair degree of attention.

5. That there are measures and means of preventing the frequent occurrence of forest fires.

6. That what is lost in one year is sufficient to establish and maintain a protective force for several years.

7. That we should make generous legislative provision for the adoption of measures and means of protection.

8. That sooner or later we, like other countries, will be forced to protect our forests and that the longer we wait the greater will be the cost of protection.

9. That forest protection is a function of the state.

10. That we have a long dry season during which fires readily start.

11. That fires will not put themselves out.

Whatever agencies affect the value of land and other public commodities are of public interest. The supply of water and timber unquestionably bears a vital relation to the value of land and the development of industry and commerce; and, since forest fires annually decrease the supply of timber and water, it is reasonable to associate public interest directly with any adequate system of forest protection.

The importance of our forests lies chiefly in the numerous uses to which they are put. They not only produce lumber, but they hold the soil and conserve the streams. They abate winds and give protection from excessive heat and cold. The forests make for the fiber, health and happiness of the citizens of the state. As a whole, the forests are of importance in providing food and shelter for certain of our domestic animals; in protecting agricultural land in their vicinity; in harboring game; in preventing erosion and fixing drifting sands; in beautifying the landscape in general; and in furnishing healthy employment to many. In hilly country the prevention of erosion is, undoubtedly, of great importance. The water from heavy rain checked in its descent by meeting first with the foliage of the trees, is better retained in forest soil than on bare land. Under a close cover of trees there collects a

Fish and game are protected by the conservation of our forests and streams.

humus soil formed from the decay of fallen leaves. Through this soil-covering the rain water filters slowly, and its passage is further retarded by the stems and roots of the trees.

There is a gradual change in public sentiment as indicated by attempts made to secure forest legislation in the state. With a forest wealth far greater than that in many other states California still fails to occupy the place she should in forestry. Many states, one or two with a greater wealth of timber than our own, are realizing and expressing this realization through generous forest legislation, that their forest re-

Throughout our forested mountains, resorts and summer homes are in need of protection.

sources are the life of industry in that their conservative management results in money circulation, stimulates labor, and by so doing establishes prosperity. Acting upon this realization the states are developing effective protective policies to prevent the indiscriminate exploitation of their forests.

We can not extensively accomplish forest protection until the lumbermen become thoroughly awakened to the practical necessity of the work. Unfortunately, some of the lumbermen are mistrustful of any agency directed toward forest regulation fearing, it would seem, that unfavorable and impracticable restrictions will be subsequent. And the general public is influenced by this attitude on the part of the lumbermen. However, disregarding attitude and unwelcome cooperation, the fact remains that our forests are being seriously impoverished each year. What the state must accomplish is to so educate the suspecting lumbermen and doubting public that wholesome regulations and restrictions will be voluntarily imposed. A law is unjust if it fails to apply favorably for the greater number. Since this is an economic fact it is obvious that the greater number should have the right to make the laws. And if there is law-making to be done it is evident that, in order to have

a good law, the people must know its substance and its full significance before permitting it to become law.

The past years have proved that prevention of forest fires is far more effective than merely fighting them after they get beyond control. The Federal Forest Service in recognition of this fact has spent both time and money in establishing thousands of miles of telephone lines in constructing hundreds of miles of trails and roads throughout the national forests. The well organized system of patrols, undoubtedly, is responsible for the prevention of many fires. This degree of protection is still inadequate to eliminate the fire hazard. Moreover, in California, only the territory within the national forests is affected by the present system; and not until the three agencies, federal, state and private, cooperate in an endeavor to develop a stronger protective policy will the benefits be generally enjoyed.

The fire season of 1913 was exceptionally severe; a great many large

A fire trail along a ridge. This very effective fire-break is 30 feet wide. All grass, weeds, and brush have been removed and the mineral soil exposed. Such trails, constructed at a nominal cost, often prevent the loss of thousands of acres of pasture and the destruction of miles of fences.

fires occasioned an enormous loss. The money loss amounted to \$511,077, an amount far in excess of the financial loss during 1914, namely \$263,160.48.

Fire conditions in California during the past summer have not been as difficult to handle as during the preceding season. This is accounted for by the following: (1) During 1914 there have been comparatively few heavy winds; (2) Although the vegetation became dry, the atmosphere has been exceptionally cool and moist during the greater part of the summer; (3) The Federal Forest Service has given the fire situation added consideration by maintaining extra fire patrols and forest guards; (4) The State Forester, so far as his limitations would allow, has made every effort to reduce the fire damage by making it popular to prevent forest fires; (5) There has been rigid prosecution of offenders against the state and federal forest laws. The figure, as given above,

showing money damage during 1914, is incomplete, since many fires have not been reported in time to be included.

Within the national forests 740 fires occurred in timber and 728 were classed as "non-timber" fires. Of the 740 timber fires, each burned an average of 15.8 acres. Throughout the summer, it has been proved that the damage actually done has been small in comparison to the damage averted. The Sisson fire was controlled at an expense to the forest service of about \$35,000. However, a great many thousand dollars worth of property would have been destroyed if the fire had not been fought. The State Forester is handicapped in preventing loss by just such fires by virtue of an inadequate state forest law.

There were 1,971 forest fires reported in 1913, while the incomplete report for 1914 shows 1,565. Forest fires, since Jannary, 1913, have caused the loss of four human lives in California.

Endeavoring to accomplish effective results with the material afforded him, the State Forester has put the voluntary firewarden system to a test. This office and the state owes a debt of gratitude to many local voluntary firewardens whose generous and able work has been instrumental in suppressing several threatening fires. Although individuals have done commendable work, there is no doubt but that the system has failed to stand the simplest test.

Table Showing Area Burned Over. Number of Fires.

Location	Area burned over—Acres				Number of fires
	Timber	Brush	Grass	Total	
Inside National forests..	11,299.48	42,463.57	-----	53,763.05	1,468

Totals -----	\$22,302 50	\$80,199 25	\$263,160 48

*Figures incomplete.

Nature's warning in California. How long shall we fail to heed that lesson which has been forced upon other countries?

Since complete statistics have not been obtained in the recent past it is not possible to state positively the actual loss occasioned by forest fires. However, sufficient data has been kept to prove that our forests have suffered an appalling annual loss. The following table gives an incomplete record of forest fires in California since 1869:

Forest fires in California.*

Year	Number of fires caused by—							Total fires	Area burned	Damage		Remarks
	Railroads	Lightning	Incendary	Brush burning	Campers	Sawmills	Unknown			Amount M. B. F.	Value	
1869							1	1			\$10,000	Fragmentary record.
1871							1	1	23,000			Do.
1877							1	1	7,000			Do.
1879					1		1	2	37,000			Do.
1880			5	9	55			69	356,895		440,750	Tenth Census record.
1881			1		1		1	3	76,000			Fragmentary record.
1884							2	2	16,000			Do.
1885							1	1	150,000			Do.
1886							1	1		4	3,000	Do.
1887				2			6	8	109,200			Do.
1888					1		4	5			42,500	Do.
1889					1		5	6			319,000	Do.
1890							7	7	32,000			Do.
1891				1	1		3	5	492,000			Do.
1892					2		5	7	12,300			Do.
1893					1		4	5	115,100			Do.
1894							1	1			4,000	Do.
1895							8	8	67,300			Do.
1896							1	1	1,000		12,000	Do.
1897	1						7	8	56,000			Do.
1898					1		2	3	20,000			Do.
1899												No record.
1900							2	2	6,500			Fragmentary record.
1901								242	18,524			National Forest only.
1902								243	7,895			Do.
1902			1					1	15,000	21,000	75,000	Fragmentary record.
1903								167	13,246			National Forest only.
1904					1			1	600	12,000	18,000	Fragmentary record.
1905			1				1	2			230,500	Do.

Conditions encountered in California by the United States Forest Service are expressed by the District Forester in part as follows:

Of August, 1914, it may be said that conditions were such that every fire, wherever located, was a potential catastrophe. Under such conditions the organization was called upon to combat 84 per cent more than the normal number of fires. (Average per season, 1908 to 1912 inclusive, 798. In 1914, 1,468 fires.)

Under these circumstances, a great many fires, outside but near the forests, that, in a normal year would be left to chance or to the unorganized efforts of local

residents, had to be attacked as promptly and as decisively as possible by the Forest Service organization. To have done otherwise would have meant a repetition of the disaster of 1910.

There are two ways by which a concrete idea of the intensity of a given fire season may be gained; one is by comparing all figures with the normal or average figures for all previous seasons for which reliable records are at hand, another is to compare them with the worst previous season. District 5's worst previous season was 1910, and the worst outbreak in 1910 was on the Tahoe National Forest when a

The destruction caused by grass or range fires is not confined to the destruction of forage alone; this shows how fences are demolished. Two lives were lost by such a fire during the summer of 1913.

total of 84 fires were fought, the United States troops assisting at those around Forest Hill. This season the Forest Service organization on the Tahoe, without help, handled 223 fires. A study of the climatological records on the Trinity National Forest shows a great similarity between the seasons of 1910 and 1914. In 1910 the Trinity's 51 fires burned over 23,191 acres; in 1914, 53 fires burned 459 acres.

A large number of fires starting is, in itself, serious; but what is even more serious is where and how they start. During August a vicious incendiary outbreak occurred on two ranger districts of the California National Forest. This element, which set upwards of 30 fires, invariably selected the hottest part of the day and the most inflammable type of country. On Goat Mountain, a brushy hill in the Sierra National Forest, the Shuteye Lookout Station spotted a string of six fires set within fifteen minutes on a hot August afternoon. In all, 212 incendiary fires occurred in the district.

Summer travel in the mountains has vastly increased in the last two years, because of road improvement and the greatly extended use of the automobile for camping trips. The supervisor of the Stanislaus Forest reports that, owing to increased travel, the fire risk in certain parts of his forest was fully ten times greater than any previous year. Indirectly, Mr. Henry Ford of Detroit, Michigan, is responsible for a portion of the increased number of forest fires in California.

Threatened Damage. The efficiency of a city fire department and the cheerfulness with which the taxpayers give up money to support it is not measured by the fire damage done in any year—it is the damage averted, in comparison with the number of fires handled.

Careful studies have been made of the results of fires that have been allowed to burn unattended. It is known with reasonable accuracy, for instance, that the McCloud River fire of 1872 burned 140,000 acres and caused a loss of \$1,200,000 worth of timber, and that the Widow Valley fire of 1910 covered 33,140 acres and

caused a timber loss of \$145,200. A careful estimate has been made by each supervisor of the money loss to timber and property which was averted on his forest by organized effort and expenditures by the Forest Service. In this estimate, lightning fires in the higher elevations were excluded and only such fires were considered as occurred in valuable and inflammable timber under such wind conditions as directly threatened timber and property in their path. The threatened damage to forest resources totals \$3,013,000, and to property, government and private, \$1,820,000—a grand total of \$4,833,000.

These trees have been killed by fire. A young forest whose future value might have been great.

The Sisson fire started at noon on July 26 under such circumstances of heat, wind, and inflammability of cover that it was a potential catastrophe fifteen minutes later. Its point of origin was in the middle of a six-mile open strip between two areas of National Forest both of which carry immense values in Government timber. The safety of this timber demanded that this fire be attacked at once and fought out. It proved to be the most stubborn and expensive fight of the season, costing about \$35,000. For over five days upwards of 500 men under the leadership of about 50 forest officers fought this fire to a finish with no let-up in the wind and no vantage point in the heavy brush from which to work. Incidental to saving the timber, the fight saved three quarters of the town of Sisson and three box factories on its outskirts—property valued at \$100,000.

The largest and most expensive fight on the Tahoe Forest was the Crystal Peak fire, which cost \$2,330 to control. A heavy wind was blowing at the time, and, unfought it would have swept Badenock Canyon and ruined a block of 60 million feet of timber worth \$120,000.

Several fires were fought and held in the vicinity of Forest Hill on the Tahoe Forest. This is where the big fires were in 1910, to fight which a detachment of United States troops were sent from the Presidio of San Francisco. In the past, unchecked fires have swept this ridge traveling 20 miles under seasonal conditions exactly similar to 1914. There are 200 million feet of sugar and yellow pine timber on this ridge—\$110,000 worth—besides mine buildings and other property worth \$100,000 more.

Organization. A total force of 970 men on the Forest pay rolls was available for protection duty on August 31, 1914.

Although the protection force is kept at its maximum only a few months, its total cost to maintain and equip during the calendar year is about \$194,000. This force put out 721 fires in 1914 without any loss in acreage and without hiring an extra fire fighter.

PROSECUTIONS.

During the year 1914, 53 arrests were made for violations of the forest laws both state and federal. This shows an increase over 1913 of 12 cases. During that year 41 arrests, in all, were made, bringing up the total for the biennial period to 94 arrests.

The following table shows in which counties the violations were committed, during 1914, and the disposition of each case:

Record of Fire Prosecutions Calendar Year 1914.

Case	County	Tried by	Place of trial	Fine	Sentence	Remarks
1	Butte	Justice Barnes	Chico	\$100 00		Two men fined \$50 each. On probation, fine to be paid in installments. Acquitted by jury.
2	Fresno	Justice F. H. Snyder	Kerman			Fine suspended.
3	Humboldt	Judge	Yreka	50 00		Bound over to Superior Court.
4	Kern	Constable Gibson	Wasco			Have to stay out of the woods all summer.
5	Los Angeles	Judge Dunham	Pasadena	50 00		Two men each fined \$25.
6	Los Angeles	Judge Barclay	San Fernando	50 00		One man and boy. Man fined \$50; boy bound over to Juvenile Court.
7	Los Angeles	Justice Glover	Azusa	50 00		
8	Los Angeles	Justice Barkley	San Fernando	25 00		
9	Los Angeles	Justice Glover	Monrovia	50 00		Jury trial. Case dismissed.
10	Los Angeles	Judge McDonald	Pasadena			Fine suspended.
11	Los Angeles	Judge Dunham	Pasadena	50 00		Fine suspended.
12	Los Angeles	Justice Melrose	Tropico	50 00		Acquitted.
13	Los Angeles	Judge McDonald	Pasadena			
14	Los Angeles	Judge Glover	Azusa	50 00		
15	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		One half of fine suspended.
16	Los Angeles	Justice Belden	San Bernardino			Six months parole. Sentence suspended.
17	Los Angeles	Judge Dunham	Pasadena	50 00		
18	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		One half of fine suspended.
19	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		One half of fine suspended.
20	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		
21	Los Angeles	Judge Taft	Pasadena			Case dismissed.
22	Los Angeles	Judge F. C. Dunham	Pasadena	150 00		One half of fine suspended.
23	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		
24	Los Angeles	Judge Barclay	San Fernando	50 00		
25	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		Fine divided among three offenders.
26	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		
27	Los Angeles	Judge F. C. Dunham	Pasadena			Case dismissed for lack of evidence.
28	Los Angeles	Judge Melrose	Tropico	50 00		
29	Los Angeles	Judge F. C. Dunham	Pasadena			Acquitted.
30	Los Angeles	Judge F. C. Dunham	Pasadena			Case dismissed.
31	Los Angeles	Judge F. C. Dunham	Pasadena		50 days	Execution of sentence suspended.
32	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		
33	Los Angeles	Judge F. C. Dunham	Pasadena	50 00		One half of fine suspended.
34	Los Angeles	Judge F. C. Dunham	Pasadena		15 days	Sentence suspended.

35	Los Angeles	Judge F. C. Dunham	Pasadena	Dismissed.
36	Orange	District Attorney West	El Toro	50 00
37	Orange	Judge Cox	Santa Ana	50 00
38	Orange	Judge Cox	Santa Ana	50 00
39	Plumas	Justice Hamblin	Greenville	50 00
40	Plumas	Justice Wilson	Quincy	Case dismissed after offender spent 24 hours in jail.
41	Plumas	Justice Wilson	Quincy	Fine suspended. Offender placed on 60 days' probation.
42	Plumas	Justice Wilson	Quincy	Ordered by sheriff to leave the county.
43	San Bernardino	Justice of Peace	San Bernardino	Acquitted by jury.
44	San Diego	Justice Price	Ramona	\$10 paid. \$40 suspended pending good behavior.
45	San Diego	Justice of Peace	Julian	Acquitted.
46	San Diego	Judge Wing	Banning	50 00
47	San Diego	Justice Wisdom	Escondido	50 days
48	San Mateo	Justice Lamb	San Mateo	Sentence suspended on good behavior.
49	Shasta	Justice Healey	Knob	Dismissed.
50	Siskiyou	District Attorney Hooper	Sawyers Bar	Offender an old man, so was placed on probation.
51	Tulare	Justice Mayfield	Lemon Cove	Dismissed.
52	Tuolumne	Justice Smyth	Tuolumne	Arrested for refusing to fight fire.
53	Ventura	Judge Barnes	Fillmore	Offenders were seven small boys. Placed on probation.
				25 00

PROTECTIVE ASSOCIATIONS.

Undoubtedly cooperative patrol is a splendid thing; a systematic and complete plan of cooperation between private, state and federal agencies is one of the fundamental aims of true forest protection. However, cooperative patrol should not constitute the base of state protective work—it should be developed to the point where state protection will be augmented and assisted by its effectiveness. Initiation rests with the state. Since the state must make the first move, it is obvious that she must develop a strong and effective protective plan of her own before inviting the assistance of and stimulating the organization of private associations.

Our watershed protective forests, when destroyed by fire, occasion an untold loss to almost every industry.

In California the situation demands state activity first, since the few associations now organized within the state are not unanimous in their appreciation of the vital necessity of effective work. The general purpose of these associations is commendable but they feel the need of unity through state supervision.

There are six protective associations in California. Each has its plan of organization and executive officers. Assessments are made at the will of the members and designed to meet costs incurred in the accomplishment of protective work deemed necessary by themselves. A supervisor, chief firewarden or professional forester is employed by some associations; but good work is also done by associations where assessments are very small, and where, with suggestions from the State Forester, the members get together and do protective work, such as brush burning, proper clearing, and the construction of fire trails.

The following reports from the few associations are conclusive:

Report from the California Forest Protective Association.

In reply to our request for a report of the protective work accomplished by the California Forest Protective Association, we receive the following:

SAN FRANCISCO, CAL., November 4, 1914.

State Forester,

Sacramento, California.

DEAR SIR: On my return to the office a few days ago I found your letter of recent date asking for information and will say that we have just forwarded blanks for forest fire reports and other information, which we will be glad to furnish your office as soon as we have it in shape.

Yours very truly,

GEO. H. RHODES, Secretary.

The secretary of the above association caused the following figures to be published in 1913: "Less than three ten thousandths of one per cent (.0003%) of the 4,603,713 acres of merchantable forests of California suffered by fire during the dry season of 1913."

These figures are very misleading and incorrect. Taking the total area of merchantable forest in California as 12,786,306 acres, the report of the Federal Forest Service alone shows that 13,861 acres of timber land were burned over; this is slightly more than one tenth of one per cent (.108%) of the total. Adding to the Forest Service figures those of fires outside the national forests and reported by firewardens to the State Forester, the total area of timber land burned over in California during 1913 is 61,812 acres or approximately one half of one per cent (.48%) of the total area of merchantable forests.

Report of the Placer Forest and Home Protective Association.

APPLEGATE, CALIFORNIA, November 4, 1914.

State Forester,

Sacramento, California.

DEAR SIR: Complying with your recent request, we are sending you herein an outline of the work accomplished during the first year's existence of the Placer Forest and Home Protective Association.

You are, of course, familiar with the details of organization, since it was largely due to the efforts of your department that we came into being in the first place, and your continued assistance at intervals, when most needed, has shaped and approved our actions. Hence we are most happy to place on file this tracing of our earnest endeavor to be a credit to the State Board of Forestry, under whose auspices we have gained our present footing.

The objects of our association appealed strongly to the residents in our district (which extends from Clipper Gap to New England Mills and from Bear River to the North Fork of the American River) and, in a few week's time, the major portion of our best citizenship had enlisted and were showing an active interest and a commendable enthusiasm in carrying on a campaign of manifest betterment.

The first work undertaken was the cutting of fire trails and the clearing and burning of dead brush which had previously constituted a menace to the property of our various members.

Since most of the fires which had swept this section in former years had approached from the south and west, it was the universal opinion that a fire lane not less than 30 feet, and in many cases 60 feet wide, should be cut from the North Fork of the American River to Bear River, a distance of approximately five miles. This was

This typical thicket is impassable and the great abundance of dead and scattered brush and branches constitutes a positive fire menace. A few owners now recognize the value of clearing up such areas.

Later.—The same tract as shown on opposite page. A great deal of the dead material has been disposed of by piling and burning; the large branches have been cut and piled for fuel; and a trail, constructed through the area, adds to the beauty of the location and serves as a means of control for any fires which may threaten. Later all the brush is removed, the trees pruned of their dead limbs, and the once unsightly and dangerous tangle is converted into an attractive natural park.

undertaken and successfully accomplished, thus creating an effective barrier to the progress of future fires coming from the threatened direction.

Later, our members put in all their spare time individually in cleaning up and burning brush which had been accumulating for years and had been allowed to lie untouched, without thought as to its being a fire menace. Hundreds of acres were made safe in the one season from December to May, so that, when summer finally came, each member had a sense of security hitherto unknown. As an evidence of the effectiveness of the work, not one serious fire occurred in the territory of the association during the dry season which followed, although fires were frequent in adjoining territory.

As the year advanced, various other things of interest to our community were taken up and carried to a successful conclusion, such, for instance, as the betterment of school conditions, the rebuilding of highway culverts and bridges and the improvement of roads. A great deal of community advertising has been accomplished through the medium of the association, a spirit of cooperation has sprung up which is gradually welding our people into a unit, and its influence will be felt throughout the entire county.

The members are at present planning next year's work and we believe that the results thereof will be even more satisfactory than those which have crowned this year's efforts. A few things, for example, which have been touched upon in this connection, are: The elimination of the ground squirrel pest and the cutting of all brush and weeds on both sides of the county roads to the property line, thus giving the community a neat and attractive thoroughfare with increased immunity from fires which are too often caused by the careless throwing of cigarettes and matches along the roadway during the dry season.

A committee on legislation has been appointed to look into all matters of interest to the taxpayer, to keep posted on all new laws that concern the general public and to report the same at intervals to our membership.

A vast amount of work can be accomplished by persistent and collective effort under the banner of our association. There is never a meeting held that someone does not offer a new and valuable suggestion. We believe in taking up one thing at a time and making the suggestion an accomplished fact. Therefore, when a suggestion is offered, it is noted by the secretary and brought up at a later date when the work in hand is complete.

The association feels more than grateful to your office for the splendid cooperation and encouragement which you have given us and we will, with pleasure, freely answer any questions brought up by other communities that wish to get together for purposes of mutual improvement, for we realize that only by organized effort can successful results be achieved.

Thanking you for past favors and hoping for a continuance of your good will and your abundant power to help us forward, we are

Sincerely yours,

W. D. READ, Secretary.

From the Redwood Fire and Protective Association.

FORT BRAGG, CALIFORNIA, November 4, 1914.

State Forester,

Sacramento, California.

DEAR SIR: Replying to your letter of November 2d regarding a report of the work this association has carried out this year. Our assessment for 1914 was 1 cent per acre. We had two patrolmen on during the danger months and did not have any fires in the redwood timber. The only fire that this association had to take care of was one that was set on the eastern boundary of the timber controlled by this association, on a stock ranch. This fire burned over about nine acres of grass and did not reach the timber at all. Outside of this one fire we have had a very successful year, and we attribute most of our success in keeping fire out to the good work of our patrolmen. We did not build any new trails this year.

I have not had time to make out my yearly report and have just given you a summary of the work we had this year and trust same will meet with your approval.

Yours very truly,

R. D. SWALES, Secretary.

Santa Cruz County Cooperative Forest and Home Protective Association.

CAPITOLA, CALIFORNIA, October 21, 1914.

*California State Board of Forestry,**Sacramento, California.*

GENTLEMEN: Since the Santa Cruz County Cooperative Forest and Home Protective Association came into being in April of 1914, it has made but little advance along the practical lines of fire protection. It is still in the formative stage and much of its work since its inception has been toward perfecting its organization. This, in itself, has been slow and discouraging work, and it is rather disheartening to have to report a lack of public response toward the furtherance of measures designed to reduce the annual fire loss of this county.

Much of the prosperity of the people here is dependent upon the scenic beauty of our forests, and certainly is largely dependent upon the maintenance of our watershed cover; and it would seem that the expensive lessons taught by our over-proportionate fire loss in past years, should result in the universal support of any movement designed to minimize this loss. Especially might it be reasonably expected that we should receive support from the larger timber owners and from the corporations controlling large areas of forest lands; but these, without exception, appear to favor a continuance of the independent and purely local protective methods upon which they have, with unfortunate result, relied in the past, and have evinced no desire whatever to cooperate with us in our efforts to inaugurate general and county-wide fire preventive measures.

We have accomplished quite a bit of educational work, and while there is no means of estimating the value of this, such educational work may have some bearing upon the fact that there have been but four forest fires in this county this year. The damage from these was inconsequential aside from the loss of watershed cover, and no standing timber was destroyed.

We have posted a thousand fire warning signs throughout the county, and have secured the cooperation of the County Board of Supervisors in establishing sixteen fire stations at as many points of special fire hazard. These stations contain complete equipment (each) for fifteen fire fighters, and are prominently posted with large signs calling attention to their purpose.

We have blocked out a system of fire trails which we hope to have completed before the summer months of next year, and shall, as a matter of course, and as we have the means, perfect our fire preventive system along all the lines which the experience of other and like associations has proved practical and effective.

Very truly yours,

HARRY HARPER, Secretary.

Report of Stockmen's Protective Association.

LIVERMORE, CALIFORNIA, November 13, 1914.

*State Forester,**Sacramento, California.*

DEAR SIR: During the summer season of 1914 the ravages of range fires were largely prevented by the cooperation of your office, working with the Stockmen's Protective Association and with property owners in general in this section. The number of acres burned over were meager considering the damage done by range fires in this thickly settled district in past years; considering both the dense population residing in the district, and the heavy growth of foliage during last spring, and which remained practically on pasture.

The protection afforded by your office and the authorities both in Alameda and San Joaquin counties encouraged the leading insurance companies to write insurance on pasture land in our district. The cooperation of the press and local business men

brought about good results, and prevented mischievous persons from counteracting the efforts of the volunteer state firewardens and the Stockmen's Protective Association in their efforts to protect property.

In the early summer months railroad locomotives were operated without hoods and spark-arresters. A request by the Stockmen's Protective Association was respected, and the railroad people immediately supplied the necessary appliances to prevent the spread of fire from locomotives in this district.

The five mounted patrolmen in Alameda County and two in San Joaquin County, all of whom were deputies of your office, performed splendid service. These men were selected on account of their previous experience and their uniform courtesy to land owners, stockmen and legitimate hunters.

The Stockmen's Protective Association this year enforced rigidly the rule which prevailed for some years past, totally prohibiting hunting on the ranges of members during the dry season.

While the prevention of contagious diseases might not be of interest to your office, still I would wish to state that during the summer season anthrax and black leg were carried from the bottom lands of the San Joaquin River to the hill and valley lands of this section. As a result of the organization of the stockmen hereabouts immediate assistance was received from the State Veterinarian and from the University of California. Meetings had been held at which instruction regarding prevention and elimination of these diseases was given.

In closing, I would strongly recommend that farmer lines of telephone be extended into the hill section in all parts of the state as much as possible. Such lines are not costly to install, and on account of the immediate assistance which can be brought to meet an incipient fire much property can be saved, especially considering the concerted effort in extinguishing fires which can be brought under control in a very short time.

In the paper which I sent to your office last year, the work of the Stockmen's Protective Association of Alameda and San Joaquin counties was described at length. It is not necessary for me to repeat the data which I gave at that time. In closing, I will say that the farmers and stock owners of this district highly appreciate the efforts of your office in assisting them in the past, especially considering the limited assistance your office could afford to give with the very small appropriation from the State of California. The board of supervisors has appropriated money to pay the patrolmen, whereas these patrolmen did not receive any payment from the State of California.

I believe this is a matter of state wide importance and the burden of the support of patrolmen should not be thrown on the county authorities entirely. I urge the organization of farmers, stockmen and timbermen to make a concerted effort to group themselves in local associations with some central organization. This must come if California, with its increasing population, would properly and at little expense conserve to its farmers, timbermen and range owners the vast domain which is now endangered by the ravages of fire.

JOHN J. CALLAGHAN, Secretary.

Mr. Callaghan, in a supplementary letter, makes the following report of fires having occurred this year in Alameda County:

August 1st, on Lillienthal ranch, 75 acres; fire burned two hours; 20 men employed; brush land; Warden Thomas Holley; cause, boys hunting.

August 4th, Dixon ranch, near Pleasanton; 75 acres; burned one hour; Warden J. J. Moy; 10 men employed. These men were railroad employees impressed by the warden.

During the summer season six fires occurred along Southern Pacific right of way in hill section, between Altamont and Midway; were immediately extinguished by railroad employees and farmers in the vicinity.

June 17th, five miles northeast of Livermore; 150 acres; burned, partly grain land; 200 men employed; two hours; in charge of Warden J. McGlinchey; cause, kilmol explosion of U. S. rodent exterminators.

June 18th, ten acres burned on Southern Pacific right of way, near Livermore; Warden John McGlinchey with 20 men in charge; cause, locomotive without hood emitting sparks on grade.

June 22d, on Southern Pacific right of way, one mile east of Altamont; five acres of pasture land destroyed and 20 tons of hay in stack; Warden John McGlinchey.

June 24th, on county road, three miles east of Livermore; two acres burned; cause, neglected camping fire.

July 8th, in La Costa Creek, Sunol, one section of land destroyed; cause, unknown; extinguished by stockmen.

July 8th, 750 acres of pasture land destroyed on sections 15 and 26, 4 S., R. 4 E., partly insured; heavy brush and timber land; fire burned at intervals for three days; Wardens Condon, Moy, Scott, Roderick, and Burns.

July 29th, three miles southwest of Pleasanton, 1,400 acres of pasture land burned; burned at intervals for two days; Patrolman J. J. Moy with 50 men in charge; cause, supposedly incendiary, by a demented man.

Tamalpais Fire Association.

(Report of the Forester.)

September 1, 1914.

The Executive Committee,

Tamalpais Fire Association.

GENTLEMEN: The work of fire prevention under my direction for the past year may be briefly summarized as follows:

AREA PROTECTED.

The district at present protected against forest, brush and grass fires extends from Mill Valley to Lagunitas and from Bolinas Ridge to the Northwestern Pacific Railroad. Its area, roughly, is 40,000 acres (including lands within incorporated towns).

PATROLMEN.

During the summer a head patrolman (H. E. Wyman) and one assistant (Frank C. Leath) have been employed, the former stationed on East Peak and the latter at Rattlesnake Camp. In addition to these regular patrolmen the following privately employed firewardens act in cooperation with the association: Marin Water and Power Company, 3 men; Lagunitas Gun Club, 3 men; Lagunitas Developemnt Company, 3 men.

FIRE FIGHTING ORGANIZATIONS.

Voluntary fire fighting organizations have been organized and equipped at Mill Valley, Corte Madera, Larkspur, Kentfield, Ross, Fairfax and Woodacre. Each of these crews is in charge of a recognized leader, who has one or two assistants; and each organization has a business and commissary agent, also with assistants. The total organized force of volunteer fire fighters includes 477 men, and provisions have been made for additions to this force in emergencies.

FIRE FIGHTING TOOLS.

At each of the above towns and at convenient points on the ridges supplies of brush hooks, shovels, axes, lanterns, and water bags have been placed in locked boxes. Keys to these boxes are widely distributed among reliable persons. These supplies furnish equipment for a total of 400 men and a reserve supply is held at Mill Valley. Several of the larger land owners have private supplies of fire fighting tools.

FIRE TRAILS.

Approximately 13 miles of fire trails were constructed last winter. They vary in width from 12 to 30 feet, depending upon the character of the brush and the fire hazard. The plan of operations calls for the construction of additional trails during the next two years, when the system of fire trails will be completed. These trails must be cleaned once every two years.

FIRES.

Up to the present date only one fire has occurred which was fought by the organized forces of the association. That was a grass fire at Corte Madera which burned over about 200 acres, slightly damaged one house and a small amount of fencing. It was promptly tackled and put out by the association's crews from Corte Madera and Larkspur.

Five grass and brush fires have occurred within the incorporated limits of San Anselmo, which were quickly extinguished by the fire department of that town. The organization of the association's fire fighting force in San Anselmo has been delayed, pending favorable action by the town trustees in the way of financial support. The season of fire danger has, of course, a month or more to run.

PUBLICITY.

The association has secured the publication of numerous articles and news items descriptive of its work in the papers of San Francisco and Marin County. Warning notices, calling attention to the necessity for care about fire, have been very generally posted throughout the hills, especially along roads and trails and at camp sites. These warnings have apparently accomplished much.

FINANCIAL SUPPORT.

The annual income of the association to date is as follows: New contributions are still coming in from time to time from property owners and the towns, and new members are joining the organization:

Property owners (10 cents per acre per year) -----	\$2,340 80
Towns -----	1,070 00
Active members -----	1,200 00
Lump sums contributed -----	668 04
	<hr/>
	\$5,278 84

In this connection it should be mentioned that, with one or two small and unimportant exceptions every property owner within the district now under protection is a contributor to the association.

FUTURE PLANS.

As a first step toward putting the work of fire prevention on a permanent basis, the association will request the supervisors of Marin County to make an appropriation for the work, raising the necessary funds by means of a tax levy. If the board of supervisors should act favorably, the association will extend its systematic protection to the whole of Marin County. The county would pay for the expense of patrol only.

Regardless of what action the county may take, it is vital to the success of the work to keep the present organization intact and its present income unimpaired for the next two years. At the end of that period the fire trail and telephone systems will have been completed, an ample supply of fire fighting tools purchased and placed, fire fighting crews organized, trained, and equipped throughout the county, and patrol and administration firmly established. The expense of the work will then drop to less than one half the present cost and the basis of financial support will be entirely reorganized.

Very truly yours,

F. E. OLMSTED, Forester.

County Activity in Forestry and Forest Protection.

County	Forestry board or committee	Name and when adopted	Annual appropriation	Work accomplished	Annual appropriation for fire protection	Claims allowed for burning fires	Firewarden	Term of employment	Salary for month	Approximate mileage of main county and state highways (not posted)	Principal shade trees

FOREST ACTIVITY BY COUNTIES.

A very few counties in California are actively engaged in carrying out any fundamental principles of forestry. Before the state passed a law authorizing the formation of county boards of forestry the demand and necessity for such a law were expressed in exceedingly enthusiastic terms. The "county forestry" bill was passed during the 1913 session of the legislature and was signed by the Governor on April 23, 1913. This law makes it possible for the counties, if they so desire, to undertake systematic planting along the county highways. The opportunities for suggestions contained in Bulletin No. 4, "Street and Highway Planting," are offered by the State Board of Forestry that the new law may the more readily serve the purpose for which it was intended.

CHAPTER 51.

An act to amend an act entitled "An act to provide for the protection and preservation of shade and ornamental trees growing and to be grown upon the roads, highways, grounds and property within the State of California; and for the planting, care, protection and preservation of shade and ornamental trees, hedges, lawns, shrubs and flowers growing and to be grown in and upon such roads, highways, grounds and property; and to create county boards of forestry for such purposes; and to prescribe the duties and powers of such boards; and to authorize such boards to appoint county foresters; and to prescribe the duties and fix the compensation of county foresters; and to empower such boards to enforce all laws and adopt and enforce any and all lawful and reasonable rules for the protection, planting, regulation, preservation, care and control of such shade and ornamental trees, hedges, lawns, shrubs and flowers," approved April 28, 1909.

(Approved April 23, 1913.)

The people of the State of California do enact as follows:

SECTION 1. The board of supervisors in each and every county or city and county of the State of California may, in its discretion, appoint a county board of forestry, consisting of five persons, one from each supervisorial district, who shall serve without compensation, and who shall have exclusive charge and control of all shade and ornamental trees, hedges, lawns, shrubs and flowers growing or to be grown upon the public roads, highways, grounds and property within its respective county.

SEC. 2. Whenever the board of supervisors of any county or city and county in this state shall, by resolution or ordinance, elect to avail itself of the provisions of this act, such board shall, within two months thereafter, appoint five suitable and competent persons, one from each supervisorial district of such county or city and county, as a county board of forestry in and for such county, who shall serve as such without compensation; and may also fix the compensation of a county forester, to be appointed as hereinafter provided at a sum not to exceed one hundred and fifty dollars per month.

SEC. 3. The term of office of such county board of forestry shall be four years; *provided, however*, that the persons first appointed shall so classify themselves by lot that two of their number shall retire from office at the end of two years, two at the end of three years, and one at the end of four years. If any vacancy occurs in the office, such vacancy shall be filled, for the unexpired term, by the board of supervisors.

SEC. 4. Within ten days after notice of their appointment, the members of said county board of forestry shall organize by the election of one of their members as chairman and adopt suitable rules for their government.

SEC. 5. When organized, said county board of forestry may employ a suitable and competent person as county forester to serve as such during the pleasure of the board and to prescribe the duties of such employee.

SEC. 6. Such forester, when appointed, shall execute a bond to said board, in the sum of one thousand dollars, for the faithful performance of his duties. He shall be the secretary of said board and shall perform such other duties as said board shall prescribe. Said forester shall have power and it shall be his duty to enforce the provisions of this act and all lawful orders of said board.

There can be no logical objection to highway planting in California. We have hundreds of miles of county and state roads, respectively, along which there is opportunity for the planting of shade trees.

EDUCATIONAL WORK.

Lectures.

At present the educational phase of forestry work deserves special consideration. The success and efficiency of a state forest policy demands the prerequisite of public enlightenment concerning the true and fundamental purpose of the work to be accomplished. And with this in view, we have taken every opportunity to conduct meetings called for the purpose of discussing forestry and allied subjects. Numerous lectures have been given by representatives of the State Board of Forestry before clubs and associations throughout the state. Several lectures were given at the University of California at the request of the students interested in forestry. Articles were prepared from time to time, as desired, for various publications. Wherever lectures are given, lantern slides are used, if possible, and the office collection of appropriate slides is constantly being increased. It has been possible to co-operate with the State Librarian by providing suitable photographs of which he has been eager to have slides made. The slides thus made are available in forestry work. The plan is to send a set of slides to clubs, associations and schools for use in educational work. A prepared article appropriate to the subjects of the slides will accompany each set. These articles will be prepared by the State Forester's office.

Fire Prevention Day.

Governor Johnson proclaimed April 18th last, Fire Prevention Day, and in accord with the purpose of the proclamation, the State Forester issued a "Fire Prevention Day Lesson." The twelve-page leaflet was designed to carry a lesson to all the school children of California, especially those above the seventh grade. Over 135,000 copies were distributed, and repeated requests are still made for copies of the lesson.

Fire Warning Notices.

Owing to the increasing number of foreigners in California and the general unfamiliarity with the English language on the part of many of the laboring class, it has been deemed necessary to have fire warning notices printed in the different languages. Such has been done and conspicuous "Fire Warning!" notices are now being posted, printed in English, Spanish, Italian, Swedish, Portuguese, Japanese, Hindu, and Greek.

Burning Permits.

The instructions "To Firewardens" have, for some time, been uncertain with regard to the issuance of fire burning permits and the procedure against persons starting fires on their own land without first securing permits. The following decision is made and firewardens are thus instructed: If burning permits are applied for, firewardens may issue or refuse them as heretofore; but, no person should be prosecuted for starting a fire *on his own land* without a permit unless it can be proven that he has not taken every proper and reasonable precaution both before the lighting of said fire and at all times thereafter to prevent the escape thereof. The fire does not have to escape to the land of another in order to prove that such proper and reasonable precautions

The forest engineer must be able to find old blazes. This "witness tree" to a section corner was blazed and marked many years ago; the scar entirely healed over; and the directing figures uncovered by expert woodcraft. The forester learns to detect such a scar when there is almost no apparent evidence of it.

have not been taken. If permit is obtained and the terms of it complied with, no criminal action should, in any case, be begun against the permittee. Those who wish to burn with reasonable care may show their good faith by getting a permit, which will be considered as relieving them from all criminal responsibility.

Fire Report for 1913.

The 1913 Fire Report issued by this office takes up in detail many of the phases of state activity in California. It contains accurate figures of the number of forest fires during 1913; the expenditures made by other states for forest protection; and the damage occasioned in this state by such fires. Some of the most serious fires of the season are written up in narrative thus bringing human interest to the front. The subject of forest legislation was given special emphasis since it is through proper legislation that a strong state forest policy must develop. The report contains many appropriate and interesting pictures. Throughout the 94 pages runs a note of warning and a lesson designed to educate the people to see the absolute necessity of adequate state protection of their forests.

Forest Protection Problem.

In order to convey clearly and concisely the present situation of forest protection in California, a leaflet has been prepared under the title of "The Forest Protection Problem in California." The subject is analyzed simply but forcibly and the essential features of forest protection and its opposition tersely stated.

Street and Highway Planting.

A very helpful and attractive bulletin "Street and Highway Planting" was recently issued for distribution by the State Forester. A great many valuable suggestions to park and street tree planters are contained and a number of original illustrations and photographs ably assist the text in making clear various points in the treatment and methods of planting ornamental trees. The following few letters of recognition, selected from a number of others, speak for the merits of the bulletin:

BERKELEY, CALIFORNIA, November 14, 1913.

State Forester,

Sacramento, California.

MY DEAR MR. HOMANS: I have received a copy of Morrison's bulletin on Street and Highway Planting, and I desire to congratulate you on the splendid manner in which this has been brought out. Mr. Morrison should feel well pleased with the way in which you have issued the publication and he is likewise to be congratulated on the subject matter itself.

If your supply will permit we should be pleased to receive several copies for filing among our botanical publications and for the use of one or two other members of the department who have not yet received copies. If it is not asking too much may I request six copies for these purposes?

Very truly yours,

H. M. HALL,
University of California, Department of Botany.

BERKELEY, CALIFORNIA, October 31, 1913.

*State Forester.**Sacramento, California.*

MY DEAR MR. HOMANS: Allow me to express most emphatically my appreciation of your two publications which I received by this morning's mail: "The Handbook of Forest Protection" and "Street and Highway Planting." In my judgment these are two publications of the widest practical importance and will exert a great influence toward the preservation of trees which we now have, and toward the promotion of tasteful and desirable plantings which Californians are now disposed to make as they have not been hitherto since the foundation of the state. I believe your work for these reasons answers a very clear and important public demand and I congratulate you upon the style and contents of your publications.

Very sincerely,

E. J. WICKSON,

Horticulturist, University of California.

Distribution of Publications.

Requests are constantly coming to the office for copies of various publications. The mailing list is ever increasing and the names of persons interested in any branch of forestry are solicited.

Of the recent publications issued by the State Board of Forestry the following are still available for free distribution:

- "Pharmaceutical Plants and Their Culture." Bulletin No. 2.
- "Wood Using Industries in California." Bulletin No. 3.
- "Fourth Biennial Report of the State Forester."
- "Street and Highway Planting." Bulletin No. 4.
- "A Handbook of Forest Protection."
- "Fire Prevention Day, A Lesson."
- "Native Growth for Planting in California." Circular No. 4.
- "The Forest Protection Problem in California." Circular No. 5.
- "Annual Fire Report, 1913."
- "Fifth Biennial Report of the State Forester."

State Institutions.

At the request of the State Board of Control, and with the purpose of determining the forest fire hazard, if any, this office is making special investigations on the respective properties of state institutions. During the spring and summer of 1914 complete observation surveys were made of the following properties: (1) Napa State Hospital at Napa; (2) Southern California State Hospital at Patton; and (3) Whittier State Reform School at Whittier. Similar study will be made, as soon as time and funds will permit, of the remaining state institutions. In each case reports are made to the Board of Control either stating that conditions existing could not be improved upon from a view of forest fire protection, or submitting recommendations relative to the adoption of a more complete system of protection. Such recommendation is made when, in our opinion, the property, by virtue of its location, condition and lack of adequate protection may be threatened and damaged by forest fires.

We wish to acknowledge and express our appreciation of the cooperation and most courteous hospitality extended so far by those in charge of the respective institutions.

Forest Investigations by Counties.

There are repeated inquiries coming to the office of the State Forester relative to county activity in forestry. During the summer of 1914 this office began an investigation of the work being done by the counties. One purpose of the work is to stimulate a further interest in forestry under the provisions of the county forestry act. Fifteen counties have been visited and the work is still being carried on. The investigation further purposes to secure data relative to every operating lumber manufacturing company in each county.

STUDY OF REDWOOD CUT-OVER LANDS.

Introduction.

The purpose of this study was to determine the conditions which prevail within and adjacent to cut-over redwood lands; the approximate extent of this logged-off type, and its susceptibility to improvement and private or public forest management. An attempt has been made to formulate an elementary outline for management and fire protection to be used by owners of such lands who are desirous of protecting and improving their wooded properties.

The number of summer homes and country estates in the redwood region is constantly increasing; and it is certain that this increase will be stimulated by the general adoption of methods of improvement and protection. Protection against fire and the invasion of inferior forms of vegetation is first in importance.

Sufficient ground was covered to enable us to discuss accurately the average and characteristic condition of these cut-over areas. Furthermore, the data obtained permits us to determine what can be expected as the result of practical forest estate management.

As a result of the use of fire in redwood logging, which, under the present system is thought necessary, the redwood forest, after logging, is practically annihilated. Because of the numerous unfavorable features encountered in logging the redwoods, namely, the rough topography, the excessive amount of slash, and the immense size of the trees, the problem of preserving the young and unmerchable trees is difficult.

In this study, when dealing with the various species, the second growth rather than the mature trees has been given prime consideration, and a knowledge of the silvicultural characteristics and requirements is essential in order to intelligently treat the second growth under conditions unlike those found in the virgin forest. Fortunately, a large number of the species which are associated with the redwood second growth reproduce by coppice, *i. e.*, by sprouting, thus rendering their propagation more simple.

Classification of Redwood Cut-over Areas.

Obviously, the remaining virgin stands of redwood do not figure in this study save for the relation which, in the future, they will bear to the same progressive and improvement principles now advocated for the present cut-over areas. For convenience the cut-over redwood lands are divided into three types, as follows:

First—Lands which, after logging, have reverted to a wild state and thickly covered with a variety of inferior species. Entirely unprotected from fire, these areas experience repeated burning which merely further deteriorates the value of the soil and renders the vegetation decidedly more inferior. These lands are practically unsettled.

Second—Areas which, since being logged, have fortunately escaped damaging fires and upon which a new growth of redwood trees has attained considerable prominence. Owing to the attraction of such areas, settlement has been stimulated and numerous country homes and resorts have been established within their borders. The protection feature has been given little or no attention save in restricted localities; consequently, coincident with each successive dry season is a very material fire risk. Fires which cause considerable damage and no little anxiety and confusion are not infrequent throughout this type.

Third—Areas similar to the second type in that they have escaped fires and have grown up to young forests of considerable value, but are not yet occupied by settlement. This type is very susceptible to a variety of improvement plans and will undoubtedly experience settlement in the near future.

General Discussion.

The lines of demarcation between the above mentioned types are very irregular and, quite frequently, one type is found wholly within another; consequently, the benefits derived from proper management of one will bear a relation to another in its correlated effect. The same is true, in a reverse sense, when existing conditions are allowed to remain; tracts of dense brush and broken limbs and excessive inflammable material are a decided menace to areas of greater value lying adjacent. Therefore any system of management to be consistently applicable must consider, in some degree, the treatment of all three types.

In order to make possible and practicable a protective improvement plan of management for the first type, that is, the wild and unsettled cut-over redwood lands, it must first be determined to what profitable use the land can be put. Whatever plan of management be adopted the purpose must be one of three or a combination of the three. These are, (1) improvement and protection, to stimulate settlement and to beautify, thereby enhancing the value of the property; (2) improvement and protection to develop a more and permanently productive area; and (3) improvement and protection to insure still greater protection. The indirect benefits derived from the latter are those occasioned by the effect of a protection forest upon stream flow and erosion.

Extent of Area Investigated.

The portions of the redwood belt studied may, for convenience, be divided into four regions, namely: The Santa Cruz Mountains; Mount Tamalpais and vicinity; the Russian River country south and west of Healdsburg, Sonoma County; and Mendocino County with its numerous watersheds. Special attention was directed to localities where summer homes, estates, and summer resorts have already been established. Here

the incentive for the adoption of some method of improvement and protection is strong. The following table shows the localities studied, in their respective regions, and their respective and adjacent watersheds:

Region	Locality	Watershed
Santa Cruz Mountains	Big Basin, State Park	Wadell Creek.
	Boulder Creek	San Lorenzo River.
	Ben Lomond	San Lorenzo River.
	Zayante Creek	San Lorenzo River.
	Loma Prieta	Aptos Creek.
		Hinkley Creek.
	Soquel	Soquel Creek.
	Bear Gulch	Bear Gulch.
	Woodside	Bear Gulch.
	La Honda	Pescadero Creek.
	Buteno Canyon	Buteno Creek.
Mount Tamalpais and vicinity	Mill Valley	Blithedale Canyon.
	Muir Woods	Bolinas Bay.
	Larkspur	Baltimore Canyon.
	Ross	
	Lagunitas	Lagunitas Canyon.
Russian River south and west of Healdsburg	Cazadero	Austin Creek.
	Duncan's Mills	Russian River.
	Montrio	Russian River.
	Camp Meeker	Dutch Bill Creek.
	Guerneville	Russian River.
	Mill Creek	Dry Creek.

In Mendocino County logging on a large scale is still in operation. However, large portions of the Noyo, Hardy Creek and Big River watersheds have been cut over. These three localities, particularly, present an excellent opportunity for the study of second growth redwood since many young stands can here be found representing a variety of age classes. The Ten-Mile River country is still covered with virgin forest, a stand of timber unexcelled by any other virgin redwood forest. Another similar stand is found along the Big Buteno Creek in Santa Cruz County. This and the Big Basin, a state park, are the only large stands of redwood remaining south of Mendocino County. The Muir Woods should not fail to be given recognition, although their extent of area is quite limited.

The Redwood Forest.

The redwood forest is very singular in its makeup, being quite distinct in many respects from any other type of forest. The distribution of the redwood is limited; in general, it occupies a strip of country varying from 6 to 35 miles wide, from the Checto River in southern Oregon south to Monterey Bay. Another strip, small, and of little commercial importance, lies near the petrified forest in Sonoma County. This strip occupies an area of about 36 square miles and extends from a little north west of the city of Napa to Knights Valley, Sonoma County. The area varies in width from one half to three miles.

Climate and topography are the chief factors determining the distribution of the redwood. The species shows a decided preference for an ocean climate, abundant heavy fogs, and a fair rainfall during the fall, winter and spring. It is a tree which does not thrive under diversified conditions and this is decidedly contrary to the characteristics of many

of its associates. The redwood reaches an altitude of nearly 3,000 feet in the southern sections of its range, while in the extreme northern localities it is largely confined to bottom land along streams and river deltas. It occurs at its best on flats and on benches along streams, on sheltered coastal plains and on gentle westerly slopes of the coast ranges. The average soil conditions throughout its range mark a sandy clay formation with a sand stone base.

Redwood is moderately tolerant of shade except in its juvenile stage and its best growth is attained in full light. Seedlings will not thrive in shaded places. On the other hand, sprouts from the root collar of stumps are very tolerant of shade. Redwood is the only conifer that reproduces to a commercial extent by sprouting and the species displays a very thrifty reproduction in this manner. Seed germination, however, is not abundant. In reproducing the redwood little attention need be given to seed germination since admirable results can so easily be obtained by the use of the sprouts. Sprouts, again, are more hardy than seedlings of the same age and size because the latter rely solely upon a tender developing root system while the sprouts have unlimited nourishment available from the parent root, already thoroughly established.

The mature redwood varies in height from 180 to 350 feet: but, averages from 200 to 280 feet. In diameter it ranges from 6 to 12 feet on the average, although in extreme cases trees with a diameter of 20 feet are found. Large and extremely old trees have a very pronounced swelling from the root collar up to as high as 12 or 15 feet above the ground. In dense stands the trunk of a fully mature tree is clear of branches up as high as 90 feet. The bark is frequently from 6 to 12 inches in thickness and is of a cinnamon brown color.

Upper Slope Type of Redwood Forest.

As the slopes become steeper and a higher altitude is reached the redwood loses in size and the stand in general becomes more scattered. Douglas fir frequently makes up 25 to 30 per cent of the stand, and, in many cases, compares well with the redwood in size. Here the tanbark oak, madrone and Chinquapin become very abundant and attain their maximum development. The maple and wax myrtle, conspicuous in the lower altitudes, almost entirely disappear, while the black, white and live oaks still maintain a good development.

The undergrowth on the upper slopes displays a marked change from its composition at lower levels. Lilac is abundant in the former situations where it grows intermingled with the huckleberry, hazel and live oak. The poison oak, salal berry and Oregon grape are still in evidence, but the brakes and thimbleberry and rhododendron have practically disappeared. On still higher elevation and on drier situations the redwood, Douglas fir, madrone, tanbark oak and practically all of the principal species disappear and the prevailing forest cover is made up principally of manzanita, buckthorn, chemise, scrub oak, Chinquapin and Christmas berry, with scattered knob cone pines and yellow pines.

The following table gives a complete list of information regarding the names and characteristics of the species found associating with the redwood:

Species associated with the Redwood and qualities pertaining to their reproduction.

Associated species	Maturity		Seeds		Seedlings				
	Month	Year	Vitality	Quantity	Borne in—	Quantity	Vigor	Tolerance	
Douglas Fir (<i>Pseudotsuga taxafolia</i>)	Sept.	1st	Excellent	Abundant	Cone	Abundant	Prolific	Moderate.	
Tanbark Oak (<i>Quercus densiflora</i>)	Oct.	2d	Good	Abundant	Acorn	Moderate	Prolific	Moderate.	
Madrona (<i>Arbutus menziesii</i>)	Nov.	1st	Fair	Moderate	Berry	Moderate	Moderate	Tolerant.	
Sitka Spruce (<i>Picea sitchensis</i>)	Oct.	1st	Excellent	Abundant	Cone	Mod. abund.	Sensitive	Moderate.	
Port Orford Cedar (<i>Chamaecyparis lawsoniana</i>)	Oct.	1st	Fairly high.	Abundant	Cone	Moderate	Moderate	Moderate.	
Western Red Cedar (<i>Thuja plicata</i>)	Aug.	1st	Excellent	Abundant	Cone	Abundant	Prolific in good moist soil	Very tolerant.	
Grand Fir (<i>Abies grandis</i>) (White Fir)	Oct.	1st	Fair	Abundant	Cone	Moderate	Not fully determin'd	Tolerant.	
Western Hemlock (<i>Tsuga heterophylla</i>)	Sept.	1st	Fair	Abundant	Cone	Moderate	Moderate	Very tolerant.	
Western Yellow Pine (<i>Pinus ponderosa</i>)	Aug.	2d	Good	Abundant	Cone	Moderate	Moderate	Intolerant.	
White Alder (<i>Alnus rhombifolia</i>)	Oct.	1st	Fair trans.	Moderate	Cone	Moderate	Moderate	Very tolerant.	
Black Cottonwood (<i>Populus trichocarpa</i>)	Apr.	1st	Good	Abundant	Capsule	Abundant	Prolific	Very intolerant.	
Broad Leaf Maple (<i>Acer macrophyllum</i>)	Spring	1st	Transient	Abundant	Winged nut.	Mod. abund.	Prolific	Tolerant when young.	
California Nutmeg (<i>Tunion californicum</i>)	Sept.	1st	Not determ'	Small	Fleshy sack.	Scanty	Moderate	Very tolerant.	
Pacific Yew (<i>Taxus brevifolia</i>)	Sept.	1st	Good	Abundant	Berry	Scanty	Moderate	Very tolerant.	
Gowen Cypress (<i>Cupressus goveniana</i>)	Sept.	2d	Good	Abundant	Cone	Abundant	Prolific	Tolerant	
California Laurel (<i>Unbellularia californica</i>)	Oct.	1st	Good	Abundant	Plum-like nut.	Abundant	Prolific	Very tolerant.	
Knobcone Pine (<i>Pinus attenuata</i>)	Sept.	2d	Excellent	Abundant	Cone	Abundant	Prolific	Very intolerant.	
Digger Pine (<i>Pinus sabiniana</i>)	Sept.	2d	Fair	Moderate	Cone	Moderate	Moderate	Very intolerant.	
Western Chinquapin (<i>Castinopsis chryso-phylla</i>)	Oct.	2d	Good	Abundant	Burr	Moderate	Moderate	Very intolerant.	
Bishop's Pine (<i>Pinus muricata</i>)	Aug.	2d	Excellent	Abundant	Cone	Abundant	Prolific	Very tolerant.	
California Sycamore (<i>Platinus racemosa</i>)	Nov.	1st	Good	Moderate	Boll	Scanty	Sen. to drouth	Intolerant.	
Cascara Sagrada (<i>Rhamnus purshiana</i>)	Aug.	1st	Good	Abundant	Berry-like nut.	Moderate	Moderate	Very tolerant.	
Wax Myrtle (<i>Myrica californica</i>)	Sept.	1st	Good	Abundant	Nut	Moderate	Moderate	Very tolerant.	
Valparaiso Oak (<i>Quercus chrysolepsis</i>)	Nov.	2d	Good	Abundant	Acorn	Scanty	Moderate	Tolerant.	
White Oak (<i>Quercus garyana</i>)	Oct.-Nov.	1st	Fair	Abundant	Acorn	Scanty	Moderate	Intolerant.	
California Black Oak (<i>Quercus californica</i>)	Oct.-Nov.	2d	Poor	Abundant	Acorn	Moderate	Moderate	Mod. tolerant.	
California Live Oak (<i>Quercus agrifolia</i>)	Oct.	1st	Fair	Abundant	Acorn	Moderate	Moderate	Very tolerant.	
Scrub Oak (<i>Quercus dumosa</i>)	Oct.-Nov.	1st	Good	Abundant	Acorn	Moderate	Moderate	Intolerant.	
California Buckeye (<i>Aesculus californica</i>)	Aug.	1st	Fair	Moderate	Leathery capsule.	Moderate	Moderate	Intolerant.	
Willows (<i>Salacaceae</i>)	May	1st	Good	Abundant	Thin capsule.	Abundant	Prolific	Mod. tolerant.	

On recently logged redwood areas fallen trees and charred material, such as broken tops and shattered logs, together with old usage and partially burned slash, render access almost impossible. Over the entire tracts destruction is written and the once heavily wooded region is transformed into a state of devastation. The litter and humus, essential to the life of the soil, are entirely consumed and the earth and out-cropping rocks are scorched, laying the earth bare of all undergrowth, and subjecting it to erosion, inroads of brush and other forest weeds.

In the management of redwood cut-over lands the primary purpose is to produce a second stand of timber which will have characteristics similar to the original forest. Where the work is of an intensive nature the owner can reasonably expect to bring about conditions even better than those which prevailed in the old forest.

In choosing the correct method of treatment the owner should first look into the tract and thoroughly acquaint himself with existing conditions such as soil, moisture, and principal species; whether or not the desired species are present or possible; if they can be depended upon for natural reproduction and to what extent; if they are being suppressed by chaparral or undesirable species; and whether or not planting will be required. Having these facts in mind, the owner can prescribe effective management, because he then knows what species to eliminate and what to expect of the species that are planted or allowed to remain.

Improvement Cuttings.

The conditions generally encountered in logged-off redwood lands are such that improvement cuttings can be used to great advantage. As a rule, cuttings of this kind are used to give the expected reproduction, planted seedlings, young and other promising trees better advantages for future growth. For the most part light and growing space are the essentials. By giving individual treatment of this kind the stand, as a whole, is materially benefited. The aim should be to give the individuals just enough space to stimulate a growth that will result in a more even crown cover, at the same time guarding against the suppression of desired species.

Cuttings of this kind may be divided into: Cleanings and thinnings when applied to the management of redwood cut-over lands. These cuttings offer the following advantages: They (1) improve the composition of the stand; (2) improve the form of the existing trees; (3) stimulate growth; (4) improve the watershed; (5) decrease the fire hazard; (6) render the area more valuable for other uses.

Cleanings.

This form of cutting is applicable to young even aged stands such as are found in the redwood belt; for example, a tract of second growth redwood, showing a good reproduction of Douglas fir, tanbark oak, madrone, laurel, etc., which has been allowed to grow for fifteen years or so without any attention. It is not uncommon to find logged areas on which a large amount of tan oak has been left, unpeeled, because it was too small. These trees, together with others, will obviously show an advance growth of perhaps 10 or 15 years over the others. Invariably, a heavy growth of lilac, huckleberry and other brush forms will be present in a case of this kind. This means that the trees having advance growth over the others, along with the brush, will, and perhaps are, over-topping and suppressing the more promising species to such a

degree that they will be injured and held back because of insufficient light and growing space. Many of these over-topping trees may be of poor form, having been badly suppressed by the original stand. If any expectation value is attached to such a tract, whether any material returns are expected or not, care should be taken to free it from fire hazard if nothing else.

Under these circumstances a cleaning is the best form of improvement cutting to use. First the brush should be cut and piled to facilitate cleaning and pruning the higher species. Many of the trees of advanced growth, but being of poor form and perhaps damaged, should be removed to give healthier specimens more light and growing space. It may not be necessary to remove a tree in every case; pruning of one or a few large limbs may give the desired result. In making cuttings of this kind care should be taken to cut the stumps low and on a slant so that water will not collect on its surface. By making the cuts clean instead of jagged, decay, due to fungus infection, can be largely avoided. This work will cost from 25 cents to \$2.00 per acre. Good judgment should be used in carrying on the work.

Eradication of Brush.

The disposal of brush is, undoubtedly, the most difficult problem met with in cleaning areas of this kind because it means keeping the brush out until the young stand is capable of keeping it suppressed. The safest and most effective method of clearing brush is to cut and pile and, at the proper time, dispose of by burning. In undertaking a piece of work of this kind the area to be cleaned should be divided into blocks or sections; the material on each particular subdivision to be cut and piled separately. Such burning should never be done on a windy day. Late in the afternoon and during the night is a good time to burn, especially when things are very dry, since there is apt to be less wind and the air is damper. After the brush has been cleared and piled the slashings from cleaning out and pruning the trees can be placed on the piles and everything burned at once.

Thinnings.

Thinnings are well adapted to the management of young even aged stands, where excessive crowding, caused by an exceedingly large number of trees per acre, is injuring good trees because of insufficient light and growing space. In such stands, however, crowding in early youth is advantageous because it causes the lower branches to be shaded out and killed. This clears the holes, makes them straight and cylindrical and reduces the length of the crowns. Crowding and shading under these conditions is beneficial also because it reduces the number of poorly developed trees per acre.

Thinnings may also be used to good advantage in heavy young stands of mixed redwood and in occasional pure stands of Douglas fir occurring within the redwood belt.

When cutting and piling is done the axemen should be instructed not to build the piles too large, especially so if the tract is well stocked with second growth, since the excessive heat from the burning piles will damage the young trees. Eight feet square and not more than six to seven feet high are good dimensions for brush piles that are to be burned adjacent to living vegetation. Burning should be done after the first

rains. Immediately after the first fall rains the litter and leaves are sufficiently damp to prevent fires spreading and, at the same time, the moisture has not penetrated far enough into the piles to make burning difficult. Piles of brush, when adjacent to other inflammable vegetation, should not be burned during the dry summer.

If a forest tract was well stocked previous to the logging operation the stumps of the coppice species will, as a rule, sprout vigorously, and a good second growth will be the result. Poorly stocked stands may, in some cases, warrant being planted or sown broadcast to prevent the creeping in of inferior species and brush.

There is all reason to believe that a number of the fast growing eastern hardwoods could be planted in the redwood belt with good results. So far, very little planting has been done within the redwood region.

Utilization of Cuttings.

It is not uncommon for owners of small tracts of timber to maintain them for the production of cordwood. Numerous owners of small tracts on and adjacent to cut-over redwood land are making a good living by cutting portions of their holdings each year or at intervals of two or three years, and by selling the product such as cordwood, fence posts, rails and material for the construction of rustic buildings, etc. Black, white, tanbark, live and Valparaiso oaks and madrone make exceptionally good cordwood. When cleanings and thinnings are made the owner can, as a rule, pay for much of the work by utilizing his cuttings as cordwood. It has been estimated that by holding and protecting redwood cut-over lands which have good average reproduction of tanbark oak, the owner may, in fifteen years, be able to realize a profit of \$5 per acre from the tanbark alone.

The Glenn Blair Redwood Company of Mendocino County has been successful in planting their logged off redwood lands to grass, thereby converting the areas into productive and valuable stock range. The seed sown is that of the *Dactylis glomerata*, commonly called orchard grass. The species is exceptionally hardy, growing equally well in sunlight and shade. Aside from its value as a forage crop, orchard grass is an effective agent for keeping down the growth of brush and weeds.

We recommend that owners of cut-over redwood lands, where convenience and conditions permit, plant their areas to this or some similar species of grass.

Trail Construction.

The building of trails on many estates, is, as a rule, but lightly considered. Trails should be made numerous throughout a tract and should aim to make accessible as many points within the tract as possible, on even grades; the maximum grade should not exceed 12 per cent; and a very suitable width is four feet. Trails now existing can, at little cost be widened sufficiently to permit them to serve as lateral fire-breaks and avenues of fire control.

The first step in the practice of forestry in the redwood belt is the establishment and maintenance of an adequate system of fire protection. This involves, at the start, the construction of fire-brakes and roads and trails. The former should be made to follow along ridges, so far as possible, with roads and trails as auxiliary laterals. In almost every case clearings should be made around dwellings; trees can be left standing but all brush and grass should be disposed of.

MILL SCALE STUDY.

The lumberman is reaping a harvest from a raw material for the production of which he has made no investment. Consequently, then, he is making capital out of natural wealth; and natural wealth, such as timber, is exhaustible. Logging methods have been wasteful, it is true, and there is but little feasibility to the arguments proposed in defense of these methods. However, the logical conclusion is that wasteful methods of logging are wrong and a wrong against natural wealth is serious and should be righted. If the conclusion were carried further, it would logically assume that few, if any, lumbermen would hesitate to adopt a method which could be proved to be both more profitable and less wasteful.

The lumberman is cutting trees of all sizes; some operators cut to a very low diameter; and no lumberman is in a position to say definitely, on his property, where the cut ceases to be profitable. In other words, he is unable to determine the lowest diameter tree that will pay him to cut. There is a point of size, in trees on given areas and under given logging costs, where, by cutting the trees, the operator will receive just as much in return for the lumber cut from them as it costs him to produce it, *i. e.*, he breaks even. Above this diameter he makes a profit; and below this diameter he sustains a loss, besides impoverishing a future natural wealth.

In an endeavor to supply the lumberman with data essential in determining approximately this limit of cut, this office has carried on an intensive mill scale study which embraces every feature of measurement with its relation to logging and manufacturing costs and market prices.

The study was conducted on the holdings of the Red River Lumber Company, which company operates a large mill at Westwood, Lassen County. At least ten men were necessary in the work of securing all necessary data. The representative of this office, as supervisor of the work, stationed six of his men in the woods and four recorded the figures relative to the various operations in the mill. Complete stem analyses were made of 919 trees and the logs from these trees marked and followed through the mill. In this manner it was possible to secure full figures of lumber cut, by quantity and quality from each of the 919 trees.

Yellow pine constitutes the dominant stand at Westwood, although the company is also cutting what is locally termed "Bull pine." By way of comparison, the study has separated these two tree classes and interesting conclusions are being reached through computation now under way.

The report of the study will be issued in the near future as a separate publication and will undoubtedly be of interest and value to lumbermen. It will enable the lumbermen to know definitely the quality of material he is handling and the significance of the increase in value due to growth. He will be able to more accurately determine whether it is more profitable to leave trees below a known diameter as an investment than to cut them at the present time.

Although the conclusions drawn can not be applicable to all logging operations in the pine forests of the state because of the varying conditions encountered in different timbered regions, the study will be valuable as an outline for similar work in localities totally unlike the region at Westwood.

APPROPRIATIONS AND EXPENDITURES.

The appropriation to carry on the work of the department of forestry for the sixty-fifth and sixty-sixth fiscal years (July 1, 1913, to July 1, 1915) was \$43,800, divided as follows:

Salaries		\$12,800 00
State Forester	\$6,000 00	
Deputy State Forester	3,600 00	
Assistant State Forester	3,200 00	
	<hr/>	
	\$12,800 00	
For support of the State Board of Forestry, including field and traveling expenses		25,000 00
For printing, binding and stationery		6,000 00
The expenditures under this appropriation were as follows:		
Salary State Forester	\$4,000 00	
Salary Deputy State Forester	2,400 00	
Salary Assistant State Forester	2,133 33	
	<hr/>	
	\$8,533 33	
Balance in salary fund, November 1, 1914		4,266 66
Appropriation for State Board of Forestry		25,000 00
Equipment, supplies and miscellaneous	\$1,716 97	
Fire investigations	434 95	
Fire fighting	926 35	
Educational work: attendance at forestry meetings; lectures delivered, etc.	195 40	
Forest studies: Cut-over land study, railroad rights of way, mill scale study, forest investigations by counties	6,314 29	
Postage	920 00	
Telephone, telegraph and expressage	241 93	
Stenography, typewriting, clerical and general office expense	5,238 07	
Janitor	320 00	
Total		16,307 96
	<hr/>	
Balance in support fund, November 1, 1914		\$8,692 04
Printing and binding appropriation		6,000 00
Fire warnings and notices	\$445 19	
Fire reports, bulletins, circulars, etc.	2,123 62	
Stationery and binding	366 24	
	<hr/>	
Total		2,935 05
	<hr/>	
Balance in printing fund November 1, 1914		\$3,064 95

APPENDIX.

An act to create a state board of forestry, and to provide for the expenses thereof.

(Approved March 3, 1885.)

The people of the State of California, represented in senate and assembly, do enact as follows:

SECTION 1. There shall be established a State Board of Forestry, consisting of three persons, appointed by the governor of the state.

SEC. 2. Each member shall hold office for the term of four years, and until his successor shall be qualified.

SEC. 3. The board may appoint and prescribe the duties of its secretary, and elect one of its members treasurer, both to hold office at the pleasure of the board.

SEC. 4. The duty of the board shall be to collect statistics and other information with regard to forestry, tree culture, and tree preservation, throughout the state; to correspond with various forestry societies and individuals, for the purpose of obtaining such information; to learn by investigation and experiments the adaptability of various trees to the different sections of the state; to disseminate such information throughout the state in such a manner as to aid and encourage the purpose for which this board is formed; to assist in enforcing and carrying out all national and state forestry laws, as far as practicable; to act with a special view to the continuance of water sources that may be affected in any measure by the destruction of forests near such sources; to do any and all things within their power to encourage the preservation and planting of forests, and the consequent maintenance of the water sources of the state.

SEC. 5. This board shall report biennially to the governor a detailed statement of its work, which shall include all disbursements that may have been made. All printing required to be done by the board for their official use shall be done by the superintendent of state printing.

SEC. 6. There is hereby appropriated for the use of this board, out of any moneys in the state treasury not otherwise appropriated, the sum of five thousand (5,000) dollars for the two years beginning the first of April, eighteen hundred and eighty-five: said sum to be used for the payment of the salary of the secretary, not to exceed the sum of one hundred and twenty-five dollars per month, the necessary traveling expenses of the members of this board, the employment of assistants, and such other needful expenditures as this board may incur, and the State Controller will draw his warrants on the state treasurer in favor of the treasurer of the board for the same.

SEC. 7. The members of this board shall receive no compensation.

SEC. 8. All acts or parts of acts in conflict with this act are hereby repealed.

An act to enlarge the powers of the state board of forestry and to provide for the expenses of said board.

(Approved March 7, 1887.)

The people of the State of California, represented in senate and assembly, do enact as follows:

SECTION 1. All the members of the State Board of Forestry of this state, and all assistants now employed or hereafter to be employed by said board, are hereby endowed with all the powers of peace officers, for the purpose of making arrests for any violation of any law applying to forests or brush land within this State, or prohibiting the destruction thereof.

SEC. 2. There is hereby appropriated for the use of this board out of the moneys in the state treasury not otherwise appropriated, the sum of twenty-nine thousand

five hundred dollars (\$29,500), for the two years beginning the first of April, 1887; said sum to be used for the payment of the salaries of the assistants of said board, the necessary traveling expenses of the members of said board, and such other needful expenditures as said board may find necessary, and the state controller shall draw his warrant on the state treasurer in favor of the treasurer of the board for the same.

SEC. 3. This act shall take effect and be in force from and after its passage.

CHAPTER CLV.

(Laws of 1903, California.)

SECTION 1. The state board of examiners are hereby empowered to enter into contracts * * * with the chief of the bureau of forestry of the department of agriculture for the purpose of studying the forest resources of the state and their proper conservation, and especially with a view of formulating a proper state forestry policy, to the extent of fifteen thousand dollars; * * *.

CHAPTER CLVII.

(Laws of 1905, California.)

SECTION 1. The state board of examiners are hereby empowered to enter into contracts * * * with the chief of the bureau of forestry of the department of agriculture for the purpose of studying the forest resources of the state and their proper conservation, and especially with a view of formulating a proper state forestry policy, to the extent of ten thousand dollars; * * *.

(Introduced in the Senate January 31, 1905.)

An act to provide for the regulation of fires on, and the protection and management of, public and private forest lands within the State of California, creating a state board of forestry and certain officers subordinate to said board, prescribing the duties of such officers, creating a forestry fund, making an appropriation for the purposes of this act, and defining and providing for the punishment of certain offenses for violations of the provisions of this act.

The people of the State of California, represented in senate and assembly, do enact as follows:

SECTION 1. *State Board of Forestry.*—There shall be a State Board of Forestry, consisting of the governor, secretary of state, attorney general and State Forester, which shall supervise all matters of state forest policy and management and convene upon the call of the governor or of its secretary.

SEC. 2. *State Forester and his duties.*—There shall be a State Forester, who shall be a civil executive officer, and who shall be a technically trained forester, appointed by the governor, to hold office at the pleasure of the appointing power; and whether any candidate for the position is a technically trained forester shall be determined by certificate from the secretary of the United States department of agriculture. He shall receive a salary of twenty-five hundred dollars per annum; and shall be authorized and empowered to appoint a clerk, whose salary shall not exceed twelve hundred dollars per annum. He shall maintain an office in San Francisco at an expense not to exceed fifty dollars per month for rent, heat, light and incidentals; be paid reasonable traveling and field expenses, which may be incurred in the necessary performance of his official duties; and act as secretary of the State Board of Forestry. He shall, under the supervision of the State Board of Forestry, execute all matters pertaining to forestry within the jurisdiction of the state; have charge of all the firewardens in the state, and direct and aid them in their duties; direct the protection and improvement of state parks and forests; collect data relative to forest destruction and conditions; take such action as is authorized by law to prevent and extinguish forest, brush and grass fires; enforce all laws pertaining to forest or brush-covered land, and prosecute for any violation of such laws; cooperate with landowners as described in section 4 of this act; and publish from time to time such information of forestry as he may deem wise. He shall prepare annually a

report to the governor on the progress and condition of state forest work, and recommend therein plans for improving the state system of forest protection, management and replacement.

SEC. 3. *Supervision and care of state parks.*—The California Redwood Park, the Mount Hamilton tract, the Santa Monica forest station, the Chico forest station, together with all moneys heretofore or hereafter appropriated for the purchase of land for or care of said parks, tracts and stations, shall be in charge of the State Board of Forestry, said board to take the place of and forthwith shall have all the powers and duties now possessed in accordance with law by persons or commissions with regard to the state parks, tracts of land, and forest stations mentioned in this act, and also any forest or brush land which may hereafter become state property, or be placed definitely in the care of the state; and it is hereby further enacted that, if the government of the United States or any individual or corporation shall, at any time, donate or entrust to the State of California, for state park or state forest reserve purposes, any tract or tracts of wholly or partially wooded land, such tract or tracts of land shall be administered at the expense of the state, as provided by law.

SEC. 4. *Cooperative work.*—The State Forester shall, upon request and whenever he deems it essential to the best interests of the people and the state, cooperate with counties, towns, corporations and individuals in preparing plans for the protection, management and replacement of trees, woodlots and timber tracts, on consideration and under an agreement that the parties obtaining such assistance pay at least the field expenses of the men employed in preparing said plans.

SEC. 5. *Publication of laws and notices.*—The State Forester shall prepare and print for public distribution, an abstract of all the forest laws of California, together with such rules and regulations in accord therewith as he may deem necessary, and shall annually print and distribute a list of all firewardens with their addresses, all such matter to be published with the approval of the State Board of Forestry. He shall also furnish notices, printed in large letters on cloth, calling attention to the danger from forest fires and to forest fire and trespass laws and their penalties. Such notices shall be posted by the firewardens in conspicuous places along every highway in brush and forest-covered country, at frequent intervals along streams and lakes frequented by tourists, hunters or fishermen, at established camping sites and in every post office in the forested region.

SEC. 6. *District firewardens.*—There shall be five district firewardens at salaries of one thousand dollars each per annum, with traveling and field expenses not to exceed seventy-five dollars per month, salaries and expenses to be paid by the state. The district firewardens shall be appointed by the State Forester to serve during his pleasure, one for each of five districts, the boundaries of which shall be determined by the State Forester and subject to change by him; and, furthermore, any county or combination of less than four counties, shall be made a separate fire district upon request of the county board or boards of supervisors, in which case such special fire district shall pay two thirds, and the state one third, of the cost of maintaining its district firewarden.

SEC. 7. *Duties of district firewardens.*—The duties of district firewardens shall be to devote their entire time to state forest interests according to rules and directions to be determined by the State Forester, with the approval of the State Board of Forestry. They shall take prompt measures to prevent and extinguish forest fires; keep a record of the cause, extent and damage of all forest fires in their respective districts, and perform such other duties as the State Forester may direct.

SEC. 8. *Voluntary firewardens and their duties.*—Each district firewarden shall appoint, subject to the approval of the State Forester, in such number and localities as he deems wise, public-spirited citizens to act as voluntary firewardens. They shall promptly report all fires to the respective district firewardens and take immediate and active steps toward their extinguishment, report any violation of the forest laws, assist in apprehending and convicting offenders, and give all possible aid to the district firewarden. For all services in extinguishing fires and in apprehending and convicting offenders, payment shall be made by the state at the rate of five cents per hour for the time actually employed; *provided, that*

payment for such services shall not be made to any federal forest reserve officials who act as firewardens, and shall not in any case exceed fifty dollars to any one person during any year. The supervisors and rangers on the federal forest reserve within the state, whenever they formally accept the duties and responsibilities of firewardens, may be appointed as voluntary firewardens, and shall have all the powers given to firewardens by this act.

SEC. 9. *Powers and requirements of firewardens.*—The State Forester and all firewardens shall have the powers of peace officers to make arrests without warrant, for violations of any state or federal forest laws, and no firewarden shall be liable to civil action for trespass committed in the discharge of his duties. Any firewarden who has information which would show, with reasonable certainty, that any person had violated any provision of such forest laws, shall immediately take action against the offender, either by using his own powers as a peace officer or by making complaint before the proper magistrate, or by information to the proper district attorney, and shall obtain all possible evidence pertaining thereto. Failure on the part of any firewarden to comply with the duties prescribed by this act shall be a misdemeanor, and punishable by a fine of not less than twenty dollars, nor more than two hundred and fifty dollars, or imprisonment for not less than ten days nor more than three months, or both such fine and imprisonment, and the State Forester is hereby authorized to investigate and prosecute such violations.

SEC. 10. *Assistance and compensation of citizens in fighting fires.*—All firewardens shall have authority to call upon able-bodied citizens between the ages of sixteen and fifty years, for assistance in putting out fires, and any such person who refuses to obey such summons, unless prevented by good and sufficient reasons, is guilty of a misdemeanor, and must be fined in a sum not less than fifteen dollars, nor more than fifty dollars, or imprisonment in the county jail of the county in which such conviction shall be had, not less than ten days, nor more than thirty days, or both such fine and imprisonment. Compensation for services in fighting fire under these provisions shall be made by the state at the rate of twenty cents per hour for the time actually employed. The firewarden in charge shall submit time record and itemized bill of the men employed, to the district firewarden, who shall examine it and forward it immediately to the State Forester with approval or criticism. The State Forester, if he approves the bill, shall forward it at once to the state for payment. In cases of emergency the district firewardens shall have power to incur expense for the transportation and other unavoidable expenses of fire fighters, and shall include the same with necessary vouchers, in their accounts.

SEC. 11. *Fire patrol.*—In times and localities of particular fire danger the State Forester may maintain a fire patrol through the district firewardens, at such places in brush or forest land as the public interest may require, one half of the expense of such patrol to be paid by the county in which such patrol is maintained, and one half by the state; and, furthermore, he may, upon written request by the counties, corporations or individuals, maintain a fire patrol on their forest lands; *provided*, that two thirds of the expense of said patrol be paid by the party or parties requesting same, and the remaining one third by the state.

SEC. 12. *District attorneys to prosecute vigorously.*—Whenever an arrest shall have been made for violation of any provision of this act, or whenever any information of such violation shall have been lodged with him, the district attorney of the county in which the criminal act was committed must prosecute the offender or offenders with all diligence and energy. If any district attorney shall fail to comply with the provisions of this section he shall be guilty of a misdemeanor, and upon conviction shall be fined not less than one hundred dollars nor more than one thousand dollars in the discretion of the court. Action against the district attorney shall be brought by the attorney general in the name of the people of the state on the relation of the State Forester. The penalties of this section shall apply to any magistrate, with proper authority, who refuses or neglects to cause the arrest and prosecution of any person or persons when complaint, under oath, of violation of any terms of this act has been lodged with him.

SEC. 13. *Destruction of warning notices.*—Any person who shall destroy, deface, remove or disfigure any sign, poster or warning notice posted under the provisions

of this act shall be guilty of a misdemeanor and punishable, upon conviction, by a fine of not less than fifteen dollars nor more than one hundred dollars, or imprisonment in the county jail for a period of not less than ten days nor more than three months, or both such fine and imprisonment.

SEC. 14. *Wilfully, maliciously and negligently setting forest fires.*—Every person, who wilfully, maliciously or negligently sets on fire or causes or procures to be set on fire any woods, brush, prairies, grass, grain or stubble on any lands not his own, or allows the fire to escape from his own land, whereby any property of another is injured or destroyed, or accidentally sets any such fire or allows it to escape from his control without extinguishing it or using every effort to extinguish it, shall be guilty of a misdemeanor, and upon conviction is punishable by a fine of not less than fifty dollars, nor more than one thousand dollars, or imprisonment for not less than thirty days nor more than one year, or both such fine and imprisonment. Setting such fires or allowing them to escape shall be prima facie proof of wilfulness, malice or neglect under this section; *provided*, that nothing herein contained shall apply to a person who, in good faith, sets a back fire to check a fire already burning.

SEC. 15. *Extinguishment of camp fires.*—Every person who, upon departing from a camp or camping place, leaves fire burning or unextinguished, or who after building such fire allows it to spread, shall be guilty of a misdemeanor and punishable by a fine of not less than fifty dollars nor more than five hundred dollars, with costs of suit and collection, one half of such fine or such a portion thereof as shall not exceed fifty dollars, to be paid to the person securing the arrest and conviction of such offender, and if the defendant refuses or neglects to pay the fine and costs imposed, he shall be confined in the county jail of the county in which conviction shall be had, for a period not to exceed one day for every two dollars of the fine imposed, or may be subject to both such fine and imprisonment.

SEC. 16. *Restriction of use of fire in dry season.*—It shall be unlawful during what is locally known as the "dry season," this to be considered as the period between May fifteenth and the first soaking rains of autumn or winter, for any person or persons to burn brush, stumps, logs, fallen timber, fallows, grass or forest-covered land, or blast wood with dynamite, powder or other explosives, or set off fire works of any kind in forest or brush-covered land, either their own or the property of another, without written permission of and under the direction or supervision of the district firewarden; these restrictions not to apply to the ordinary use of fire or blasts in logging redwood, nor in cases where back-fires are set in good faith to stop an existing fire. Violation of these provisions shall be a misdemeanor, punishable, upon conviction, by a fine of not less than fifty dollars, nor more than one thousand dollars, or imprisonment not less than thirty days nor more than one year, or both such fine and imprisonment.

SEC. 17. *Engines in forest land.*—Logging locomotives, donkey or threshing engines, railway locomotives, and all other engines, boilers and locomotives operated in, through or near forests, brush or grass land, which do not burn oil as fuel, shall be provided with appliances which will prevent the escape of fire and sparks from the smokestacks thereof, and with adequate devices to prevent the escape of fire from ash pans and fire boxes. Failure to comply with these requirements shall be a misdemeanor, punishable, upon conviction, by a fine of not less than one hundred dollars nor more than five hundred dollars, and any officer or employee of a railroad company violating any provision of this section shall be liable to a penalty of not less than fifty dollars nor more than one hundred dollars, for every such violation, or imprisonment for not less than thirty days nor more than three months, or both such fines and imprisonment.

SEC. 18. *Civil liability for forest fires.*—In addition to the penalties provided in sections 15, 16, 17, and 18 of this act, the United States, state, county, or private owner, whose property is injured or destroyed by such fires, may recover, in a civil action, double the amount of damages suffered if the fires accrued through wilfulness, malice or negligence; but if such fires were caused or escaped accidentally or unavoidably, compensation shall be only for the actual damage sustained as determined by the value of the property injured or destroyed, and the detriment to the land and

vegetation thereof. The presumption of wilfulness, malice or neglect shall be overcome; *provided*, that the precautions set forth in section 18 are observed; or, *provided*, under section 17, fires are set during the "dry season" with written permission of and under the direction of the district firewarden. Persons or corporations causing fires by violations of sections 15, 16, 17, or 18 of this act shall be liable to the state in action for debt, to the full amount of all expenses incurred by the state in fighting such fires.

SEC. 19. *Clearing along county roads and railroads.*—Counties, along the county roads, and railroad companies along their lines of road, in forest or brush land, shall, when so directed by the State Forester, and in a manner and to an extent prescribed by him, cut and remove all brush, grass and inflammable material from their rights of way. If such clearing is not done within a reasonable time after notice, said time to be fixed by the State Forester, the State Forester shall have it done and the county or railroad company shall be liable to the state in an action for debt to the amount of the expense thus incurred, and in addition thereto for the expense of any fire patrol rendered necessary by such delay; *it is provided, further*, that all lumber companies, corporations, or individuals shall, when so instructed by the State Forester, and at a time and in a manner prescribed by him, carefully burn their slashings, by which is meant the tops, limbs, and general debris left after lumbering.

SEC. 20. *Disposals of moneys received as penalties.*—All moneys received as penalties for violations of the provisions of this act, less the cost of collection, and not otherwise provided for, shall be paid into the state treasury to the credit of the forestry fund, available only for purposes of forest protection, management and replacement.

SEC. 21. *Moneys for forest purposes.*—County boards of supervisors are hereby authorized to appropriate money for purposes of forest protection, improvement and management.

SEC. 22. *Payment of expenses under this act.*—There is hereby appropriated for the remainder of the fifty-sixth fiscal year, and for the fifty-seventh and fifty-eighth fiscal years, the sum of fifty thousand dollars (\$50,000.00) for carrying out the provisions of this act, and for the payment of all salaries and expenses herein provided for.

SEC. 23. All acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

CHAPTER CCLXIV.

An act to provide for the regulation of fires on, and the protection and management of, public and private forest lands within the State of California, creating a state board of forestry and certain officers subordinate to said board, prescribing the duties of such officers, creating a forestry fund, and appropriating the moneys in said fund, and defining and providing for the punishment of certain offenses for violations of the provisions of this act, and making an appropriation therefor.

(Approved March 18, 1905.)

The people of the State of California, represented in senate and assembly, do enact as follows:

SECTION 1. *State Board of Forestry.*—There shall be a State Board of Forestry, consisting of the governor, secretary of state, attorney general and State Forester, which shall supervise all matters of state forest policy and management and convene upon the call of the governor or of its secretary.

SEC. 2. *State Forester and his duties.*—There shall be a State Forester, who shall be a civil executive officer, and who shall be a technically trained forester, appointed by the governor to hold office at the pleasure of the appointing power; and whether any candidate for the position is a technically trained forester shall be determined by certificate from the secretary of the United States department of agriculture, or from the department of forestry of the state university after such department is established. He shall receive a salary of twenty-four hundred dollars per annum, and shall be authorized and empowered to appoint two assistant foresters,

whose salaries shall not exceed twelve hundred dollars each per annum. He shall maintain headquarters at the state capitol in an office provided by the secretary of state, and shall be allowed necessary office and contingent expenses. He and his assistants shall be paid reasonable traveling and field expenses which may be incurred in the necessary performance of their official duties. He shall act as secretary of the State Board of Forestry. He shall, under the supervision of the State Board of Forestry, execute all matters pertaining to forestry within the jurisdiction of the state; have charge of all firewardens in the state, and direct and aid them in their duties; direct the protection and improvement of state parks and forests; collect data relative to forest destruction and conditions; take such action as is authorized by law to prevent and extinguish forest, brush, and grass fires; enforce all laws pertaining to forest and brush-covered land, and prosecute for any violation of such laws; cooperate with landowners, as described in section 4 of this act; and publish from time to time such information of forestry as he may deem wise. He shall prepare annually a report to the governor on the progress and condition of state forest work, and recommend therein plans for improving the state system of forest protection, management and replacement.

SEC. 3. *Supervision and care of state parks.*—The California Redwood Park and the Mount Hamilton tract, together with all moneys heretofore or hereafter appropriated for the purchase of land for or care of said parks, tracts and stations, shall be in charge of the State Board of Forestry, said board to take the place of and forthwith shall have all the powers and duties now possessed in accordance with law by persons or commissions with regard to the state parks, tracts of land, and forest stations mentioned in this act, and also any forest or brush land which may hereafter become state property, or be placed definitely in the care of the state; and it is hereby further enacted that if the government of the United States or any individual or corporation shall, at any time, donate or entrust to the State of California, for state park or state forest reserve purposes, any tract or tracts of wholly or partially wooded land, such tract or tracts of land shall be administered at the expense of the state, as provided by law.

SEC. 4. *Cooperative work.*—The State Forester shall, upon request and whenever he deems it essential to the best interests of the people and the state, cooperate with counties, towns, corporations and individuals in preparing plans for the protection, management and replacement of trees, woodlots and timber tracts, on consideration and under an agreement that the parties obtaining such assistance pay at least the field expenses of the men employed in preparing said plans.

SEC. 5. *Publication of laws and notices.*—The State Forester shall prepare and print for public distribution, an abstract of all the forest laws of California, together with such rules and regulations in accord therewith as he may deem necessary, and shall annually print and distribute a list of all firewardens with their addresses, all such matter to be published with the approval of the State Board of Forestry. He shall also furnish notices, printed in large letters on cloth, calling attention to the danger from forest fires and to forest fire and trespass laws and their penalties. Such notices shall be posted by the firewardens in conspicuous places along every highway in brush and forest-covered country, at frequent intervals along streams and lakes frequented by tourists, hunters or fishermen, at established camping sites, and in every post office in the forested region.

SEC. 6. *Fire districts.*—The State Forester shall divide the state into such number of fire districts as shall be deemed by him most necessary to the efficiency of his work; and, furthermore, any county, or combination of less than four counties, shall be made a separate fire district, upon request of the county board or boards of supervisors, in which case such special fire district shall pay the cost of maintaining the district firewarden.

SEC. 7. *Duties of assistant foresters.*—The duties of the assistant foresters shall be to devote their entire time to state forest interests according to rules and directions to be determined by the State Forester, with the approval of the State Board of Forestry. They shall take prompt measures to prevent and extinguish forest fires; keep a record of the cause, extent and damage of all forest fires in their respective districts, and perform such other duties as the State Forester may direct.

SEC. 8. *Voluntary firewardens and their duties.*—The State Forester shall appoint, in such number and localities as he deems wise, public-spirited citizens to act as voluntary firewardens, who may receive payment for their services from the counties or from private sources. They shall promptly report all fires and take immediate and active steps toward their extinguishment, report any violation of the forest laws, assist in apprehending and convicting offenders, and perform such other duties as the State Forester may direct. The supervisors and rangers on the Federal Forest reserve within the state, whenever they formally accept the duties and responsibilities of firewardens, may be appointed as voluntary firewardens, and shall have all the powers given to firewardens by this act.

SEC. 9. *Powers and requirements of firewardens.*—The State Forester and all firewardens shall have the powers of peace officers to make arrests without warrant, for violations of any state or federal forest laws, and no firewarden shall be liable to civil action for trespass committed in the discharge of his duties. Any firewarden who has information which would show, with reasonable certainty, that any person had violated any provision of such forest laws, shall immediately take action against the offender, either by using his own powers as a peace officer or by making complaint before the proper magistrate, or by information to the proper district attorney, and shall obtain all possible evidence pertaining thereto. Failure on the part of any paid firewarden to comply with the duties prescribed by this act shall be a misdemeanor, and punishable by a fine of not less than twenty dollars, nor more than two hundred and fifty dollars, or imprisonment for not less than ten days nor more than three months, or both such fine and imprisonment and the State Forester is hereby authorized to investigate and prosecute such violations.

SEC. 10. *Assistance of citizens in fighting fires.*—All firewardens shall have authority to call upon able-bodied citizens between the ages of sixteen and fifty years, for assistance in putting out fires, and any such person who refuses to obey such summons, unless prevented by good and sufficient reasons, is guilty of a misdemeanor, and must be fined in a sum not less than fifteen dollars, nor more than fifty dollars, or imprisonment in the county jail of the county in which such conviction shall be had, not less than ten days, nor more than thirty days, or both such fine and imprisonment; *provided*, that no citizen shall be called upon to fight fire a total of more than five days in any one year.

SEC. 11. *Fire patrol.*—In times and localities of particular fire danger the State Forester may maintain a fire patrol, through the firewardens, at such places in brush or forest land as the public interest may require, the expense of such patrol to be paid by the county in which such patrol is maintained; and, furthermore, he may, upon written request by counties, corporations or individuals, maintain a fire patrol on their forest lands; *provided*, that the expense of said patrol be paid by the party or parties requesting same.

SEC. 12. *District attorneys to prosecute vigorously.*—Whenever an arrest shall have been made for violation of any provision of this act, or whenever any information of such violation shall have been lodged with him, the district attorney of the county in which the criminal act was committed must prosecute the offender or offenders with all diligence and energy. If any district attorney shall fail to comply with the provisions of this section he shall be guilty of a misdemeanor, and upon conviction shall be fined not less than one hundred dollars nor more than one thousand dollars in the discretion of the court. Action against the district attorney shall be brought by the attorney general in the name of the people of the State on the relation of the State Forester. The penalties of this section shall apply to any magistrate, with proper authority, who refuses or neglects to cause the arrest and prosecution of any person or persons when complaint, under oath, of violation of any terms of this act has been lodged with him.

SEC. 13. *Destruction of warning notices.*—Any person who shall destroy, deface, remove or disfigure any sign, poster or warning notice posted under the provisions of this act shall be guilty of a misdemeanor and punishable, upon conviction, by a fine of not less than fifteen dollars nor more than one hundred dollars, or imprisonment in the county jail for a period of not less than ten days nor more than three months, or both such fine and imprisonment.

SEC. 14. *Wilfully, maliciously and negligently setting forest fires.*—Every person, who wilfully, maliciously or negligently sets on fire or causes or procures to be set on fire any woods, brush, prairies, grass, grain or stubble on lands not his own, or allows the fire to escape from his own land, whereby any property of another is injured or destroyed, or accidentally sets any such fire or allows it to escape from his control without extinguishing it or using every effort to extinguish it, shall be guilty of a misdemeanor, and upon conviction is punishable by a fine of not less than fifty dollars, nor more than one thousand dollars, or imprisonment for not less than thirty days nor more than one year, or both such fine and imprisonment. Setting such fires or allowing them to escape shall be prima facie proof of wilfulness, malice or neglect under this section; *provided*, that nothing herein contained shall apply to a person who, in good faith, sets a back-fire to check a fire already burning.

SEC. 15. *Extinguishment of camp fires.*—Every person who, upon departing from a camp or camping place, leaves fire burning or unextinguished, or who after building such fire allows it to spread, shall be guilty of a misdemeanor and punishable by a fine of not less than fifty dollars nor more than five hundred dollars, with costs of suit and collection, one half of such fine or such a portion thereof as shall not exceed fifty dollars to be paid to the person securing the arrest and conviction of such offender, and if the defendant refuses or neglects to pay the fine and costs imposed, he shall be confined in the county jail of the county in which the conviction shall be had, for a period not to exceed one day for every two dollars of the fine imposed, or may be subject to both such fine and imprisonment.

SEC. 16. *Restriction of use of fire in dry season.*—It shall be unlawful during what is locally known as the "dry season," this to be considered as the period between May fifteenth and the first soaking rains of autumn or winter, for any person or persons to burn brush, stumps, logs, fallen timber, fallows, grass or forest-covered land, or blast wood with dynamite, powder or other explosives, or set off fireworks of any kind in forest or brush-covered land, either their own or the property of another, without written permission of and under the direction or supervision of a firewarden in that district; these restrictions not to apply to the ordinary use of fire or blasts in logging redwood, nor in cases where back-fires are set in good faith to stop an existing fire. Violation of these provisions shall be a misdemeanor, punishable, upon conviction, by a fine of not less than fifty dollars, nor more than one thousand dollars, or imprisonment not less than thirty days nor more than one year, or both such fines and imprisonment.

SEC. 17. *Engines in forest land.*—Logging locomotives, donkey or threshing engines, and other engines and boilers operated in, through or near forests, brush or grass land, which do not burn oil as fuel, shall be provided with appliances to prevent the escape of fire and sparks from the smokestacks thereof, and with devices to prevent the escape of fire from ash pans and fire boxes. Failure to comply with these requirements shall be a misdemeanor, punishable, upon conviction, by a fine of not less than one hundred dollars nor more than five hundred dollars, and any person violating any provision of this section shall be liable to a penalty of not less than fifty dollars nor more than one hundred dollars, for every such violation, or imprisonment for not less than thirty days nor more than three months, or both such fine and imprisonment.

SEC. 18. *Civil liability for forest fires.*—In addition to the penalties provided in sections 14, 15, 16 and 17 of this act, the United States, state, county, or private owners, whose property is injured or destroyed by such fires, may recover, in a civil action, double the amount of damages suffered if the fires occurred through wilfulness, malice or negligence; but if such fires were caused or escaped accidentally or unavoidably, civil action shall lie only for the actual damage sustained as determined by the value of the property injured or destroyed, and the detriment to the land and vegetation thereof. The presumption of wilfulness, malice or neglect shall be *reversed*; *provided*, that the precautions set forth in section 17 are observed; or *provided*, under section 16, fires are set during the "dry season" with written permission of and under the direction of the district firewarden. Persons or corporations

causing fires by violations of sections 14, 15, 16 and 17 of this act shall be liable to the state or county in action for debt, to the full amount of all expenses incurred by the state or county in fighting such fires.

SEC. 19. *Clearing along county roads and land after lumbering.*—Counties, along the county roads, in forest or brush land, shall, when so directed by the State Forester, and in a manner and to an extent prescribed by him, cut and remove all brush, grass and inflammable material from their rights of way. If such clearing is not done within a reasonable time after notice, said time to be fixed by the State Forester, the State Forester shall have it done and the county shall be liable to the state in an action for debt to the amount of the expense thus incurred, and in addition thereto for the expense of any fire patrol rendered necessary by such delay; *it is provided, further*, that all lumber companies, corporations, or individuals shall, when so instructed by the State Board of Forestry, and at a time and in a manner prescribed by said board, carefully burn their slashings, by which is meant the tops, limbs, and general debris left after lumbering.

SEC. 20. *Disposals of moneys received as penalties.*—All moneys received as penalties for violations of the provisions of this act, less the cost of collection, and not otherwise provided for, shall be paid into the state treasury to the credit of the forestry fund, which fund is hereby created, and the moneys therein are hereby appropriated for purposes of forest protection, management and replacement under direction of the State Board of Forestry.

SEC. 21. *Moneys for forest purposes.*—County boards of supervisors may appropriate money for purposes of forest protection, improvement and management.

SEC. 22. *Payment of expenses under this act.*—There is hereby appropriated for the fifty-seventh and fifty-eighth fiscal years, the sum of seventeen thousand six hundred dollars (\$17,600.00) for carrying out the provisions of this act, and for the payment of all salaries and expenses herein provided for.

SEC. 23. All acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

CHAPTER 408.

(Laws of 1911, California.)

SECTION 1. A commission consisting of three persons which shall be known and designated as the "Conservation Commission of the State of California," is hereby created and established for the purpose of investigating and gathering data and information concerning the subjects of forestry, water, the use of water, water power, electricity, electrical or other power, mines and mining, mineral and other lands, dredging, reclamation and irrigation, and for the purpose of revising, systematizing and reforming the laws of this state, upon, concerning, regarding or appertaining to these said subjects.

SEC. 2. Said commission shall be appointed by the governor, and shall enter upon the performance of its duties immediately. The members of said commission shall hold office at the pleasure of the governor. In case of a vacancy in said commission, such vacancy shall be filled by appointment by the governor.

SEC. 3. It shall be the duty of said commission to investigate and examine the laws of the United States, of foreign nations, of the states of the union and of this state, and the reports and recommendations of persons, officials, commissions, societies and associations upon the subjects of forestry, water, the use of water, water power, electricity, electrical and other power, mines and mining, mineral and other lands, dredging, reclamation and irrigation and to prepare and recommend to the legislature laws, statutes and constitutional amendments revising, systematising and reforming the laws of this state upon forestry, water, the use of water, water power, electricity, electrical and other power, mines and mining, mineral and other lands, dredging, reclamation and irrigation. The said commission is hereby authorized and empowered to do and perform the acts and things required of it by this act, and to adopt all rules and regulations necessary to carry out the provisions of this act.

SEC. 4. The said commission is hereby empowered and authorized to have printed by the state printer its reports, records and proceedings in the manner provided by law.

SEC. 5. It is hereby made the duty of the attorney general, surveyor general, the state engineer and all other state officers to render such aid and assistance to said board as said board may require.

SEC. 6. For the purpose of carrying out the provisions of this act the said commission is authorized to employ such expert, technical, professional and clerical assistance and upon such terms as it may deem proper.

SEC. 7. In order to carry out the provisions of this act the members of said commission or any person authorized by it are authorized to enter and cross all lands within this state, and to make all proper and necessary surveys and measurements of land and water; provided, that in doing so no damage is done to private property; and it shall be a misdemeanor, for any person or persons to wilfully and maliciously remove or destroy any permanent marks or monuments made or erected by said commission or any person or persons under its direction or authorization, or to prevent the members of the said commission or any person authorized by said commission to enter and cross any land within this state or to make surveys and measurements of land and water.

SEC. 8. Said commissioners shall receive no salary for their services but shall be allowed their actual expenses while in the performance of their duties as in this act provided.

SEC. 9. The sum of \$100,000 is hereby appropriated out of the funds of the state not otherwise appropriated for the purposes of carrying out the provisions of this act, and the state controller is hereby authorized and directed to draw warrants upon such sum from time to time upon the requisition of said conservation commission approved by the board of examiners, and the state treasurer is hereby authorized and directed to pay such warrants.

SEC. 10. All acts or parts of acts in conflict herewith are hereby repealed.

SEC. 11. This act shall take effect immediately.

An act to amend an act entitled "An act to provide for the regulation of fires on, and the protection and management of, public and private forest lands within the State of California, creating a state board of forestry and certain officers subordinate to said board, prescribing the duties of such officers, creating a forestry fund, and appropriating the moneys in said fund, and defining and providing for the punishment of certain offences for violations of the provisions of this act, and making an appropriation therefor," approved March 18, 1905. (Amendment introduced in 1913.)

The people of the State of California do enact as follows:

SECTION 1. Section six of the above entitled act is hereby amended to read as follows:

6. The State Forester shall divide the state into such number of fire districts as shall be deemed by him most necessary to the efficiency of his work. He shall create and maintain, during the dry season, a fire patrol system, and make rules and regulations for the prevention and suppression of fires in any timber, brush, grass or other inflammable vegetation or material. He may appoint a district firewarden for each of said districts so established, and he may also employ within such districts such number of fire patrolmen as, in his judgment, may be required to carry out the provisions of this act, assigning to each of the latter the territory over and within which they shall have jurisdiction and fix the amount of the compensation for all district firewardens and fire patrolmen for services actually rendered which shall not exceed the rate of seventy-five dollars per month; the district firewardens and the fire patrolmen may be paid necessary traveling and field expenses. They shall devote their entire time to the prevention and extinguishment of fire in any timber, brush, grass or other inflammable vegetation or material in their respective districts, and the performance of such other duties as the State Forester may direct. The State Forester shall have the power to remove any officer or employee appointed or employed by him. He may purchase necessary equipment, instruments and field supplies. He shall have authority to establish lookout stations and telephone or other systems of communication connecting the same, and to equip and maintain depots for the storing of tools for the extinguishment of forest fires. For the purpose

of controlling and extinguishing fires in any timber, brush, grass or other inflammable vegetation or material the State Forester is authorized to summon and employ suitable persons for controlling and extinguishing such fires and to delegate this authority to the district firewardens and the fire patrolmen, and each person so summoned or employed may be paid twenty-five cents for each hour of service rendered by him and be provided with subsistence during such service; *provided*, no owner, lessee, or person in control of lands upon which fires may be burning or threatening, or any one in the employ of such owner, lessee or person in control shall receive any compensation from the state for extinguishing or controlling any such fire.

The State Forester may and hereby is authorized to enter into agreements with persons, firms, associations, or corporations owning or controlling land covered wholly or in part by timber, brush, grass or other inflammable vegetation or material, or with any group or groups of persons, firms, associations or corporations owning or controlling such land for the purpose of cooperation in maintaining a fire patrol system for preventing and suppressing fires in timber, brush, grass, or other inflammable vegetation or material which endanger or are liable to endanger life or property or life and property. Such agreements may provide that persons, firms, associations or corporations owning or controlling land covered wholly or in part by timber, brush, grass or other inflammable vegetation or material, or group or groups of persons, firms, associations or corporations owning or controlling such land shall bear part or all of the expenses of maintaining such fire patrol system, and no such agreement shall become effective until the person, firm, association or corporation or groups of persons, firms, associations or corporations entering into such agreement shall have paid, into the fund, hereinafter provided for the maintenance of a fire patrol system their pro rata of the expenses stipulated by the terms of the agreement. A fund in the state treasury, to be known as the fire patrol maintenance fund, is hereby created, into which shall be paid the money for the expenses of maintaining the cooperative fire patrol system, as heretofore provided for, in such amounts and at such times as the agreement may direct. All claims presented for payment from the fire patrol maintenance fund shall be audited and paid in a similar manner as other claims against the state. The State Forester may enter into agreements with the federal government, under such terms as he deems advisable or as may be provided for by law, for the purpose of maintaining a fire patrol system for preventing and suppressing fires in any timber, brush, grass or other inflammable vegetation or material. The expense incurred in preventing and extinguishing fires in any timber, brush, grass or other inflammable vegetation or material as provided by law shall be paid from the appropriation or funds available for fire protection.

SEC. 2. Section eleven of the above entitled act is hereby amended to read as follows:

11. Whenever in this act the performance or nonperformance of any act or thing is made a misdemeanor, the person, or the officer, member, manager, agent, director, or employee of any fire association, or corporation who shall direct the performance or nonperformance of such act or thing is likewise and in the same manner guilty of a misdemeanor and shall be punished in like manner as the person actually performing such act or thing.

SEC. 3. Section eighteen of the above entitled act is hereby amended to read as follows:

18. Any fire in any timber, brush, grass or other inflammable vegetation or material, burning uncontrolled and without proper precaution being taken to prevent it from spreading, and which endangers or may endanger life or property is hereby declared to be a public nuisance; and any person, firm, association or corporation owning or controlling lands upon which such nuisance exists is hereby required to abate it immediately by controlling or extinguishing it. In addition to the penalties provided in this act, the United States, state, county, or private owners, whose property is injured or destroyed by such fires, may recover in a civil action, double the amount of damages suffered if the fires occurred through wilfulness, malice or negligence; but if such fires were caused or escaped accidentally or unavoid-

ably, civil action may lie only for the actual damage sustained as determined by the value of the property injured or destroyed, and the detriment to the land and vegetation thereof. The presumption of wilfulness, malice or neglect shall be overcome: *provided*, that the precautions set forth are observed; *or provided*, fires are set during a "dry season" with written permission of and under the direction of the district firewarden. Persons or corporations causing fires by violations of this act shall be liable to the state or county in action for debt, to the full amount of all expenses incurred by the state or county in fighting such fires; such expenses, less cost of collection, shall be paid into the state or county treasury, as the case may be, to the credit of the appropriation or fund for fire protection.

SEC. 4. Section nineteen of the above entitled act is hereby amended to read as follows:

19. All inflammable debris upon forest areas, which by reason of its location or condition or lack of protection may endanger life or property, is hereby declared to be a public nuisance. If the State Forester finds that such a nuisance exists, he shall in writing notify the owner, lessee, the person in control, or the agent of said owner or lessee of the land on which said nuisance is situated of the existence of such nuisance, and shall require that such nuisance be abated within a period and in a manner specified in such notice. But the State Forester may, for good cause shown, extend the time in which such nuisance shall be abated. Whenever such nuisance exists and the proper notice shall have been served, and the period specified in such notice, or any extension thereof, shall have elapsed, without the nuisance having been abated, it shall be the duty of the State Forester to cause the same to be summarily abated. Any notice provided for in this section shall be served in a like manner as a summons in a civil action as provided by the Code of Civil Procedure. The expense of the summary abatement of a nuisance as provided in this act may be paid from the money appropriated for fire protection. Any and all expenses incurred for the summary abatement of a nuisance under the provisions of this act shall be and become a lien on the lands upon which such nuisance shall have existed, the said expenses to be prorated among the owners of such lands according to the number of acres belonging to said owners on which said nuisance was abated. Action to foreclose such lien shall be begun within one year. Such lien shall be filed by the State Forester, or under his direction by any of his assistants or firewardens within ninety days after the abatement of such nuisance. Proceedings for the satisfaction of such lien shall be instituted, at the request of the State Board of Forestry and in the name of the people of the State of California by the district attorney of the county in which said nuisance was abated; and the costs shall be recovered in the usual manner and paid into the state treasury to the credit of the appropriation or fund for fire protection.

ENROLLED COPY OF ASSEMBLY BILL No. 643.

When the following bill was before the Governor for consideration it was the consensus of opinion that neither the present law nor the herewith proposed law, which was pocketed by the Governor, presents a form under which any effective or proper method of administration of a fire patrol system could be carried out by the state.

CHAPTER -----

An act creating a state board of forestry; prescribing its power and duties; creating the office of state forester and providing for the appointment and revocation of appointment of a proper person thereto and the certification of his qualifications; prescribing the power and duties of the state forester and fixing his salary; providing for the appointment and revocation of appointment of assistant foresters and fixing their duties and salaries; providing for the appointment of and revocation of appointment of firewardens and prescribing their duties and mode of compensation; providing for cooperative agreements between the state board of forestry and persons, firms, associations, or corporations, or any combination or group of such persons, firms, associations or corporations and for agreements between the state board of forestry and the federal government; declaring certain fires to be public nuisances, and requiring those owning or controlling the lands upon which said nuisances exist to abate them; declaring certain inflammable debris to be public nuisances, providing for their inspection and abatement, authorizing and providing for the summary abatement of all nuisances declared by this act; making the cost of the abatement of certain nuisances a lien upon the land on which said nuisances are situated; providing for the filing of and the satisfying of claims for such liens and the recovery of costs accruing for said filing and satisfaction; providing for the satisfaction of such liens by district attorneys and the compensation of district attorneys therefor; declaring the duty of those owning or controlling lands on which fires may burn; providing for the payment into county treasuries of moneys collected under the penal sections of this act; providing penalties for violating the provisions of this act; defining the word "forest"; repealing chapter 264 of the laws of 1905 as amended by the act of April 7, 1911, and all acts or parts of acts in conflict with the provisions of this act; providing for the designation of this act.

The people of the State of California do enact as follows:

SECTION 1. There is hereby created a State Board of Forestry consisting of three members, who shall serve without compensation, to be appointed by the governor, and who may be removed by the governor. The said board shall supervise all matters of forest policy and management over which the state has jurisdiction.

SEC. 2. The State Board of Forestry is hereby authorized and directed to make rules and regulations and to establish a system or systems, under the provisions of this act, for the prevention and suppression of forest fires.

SEC. 3. There is hereby created the office of State Forester, the appointee to which office shall be a technically trained forester, who shall be appointed by and hold office at the pleasure of the State Board of Forestry; and whether any candidate for the position is a technically trained forester shall be determined by certificate from the secretary of the United States department of agriculture, or from the department of forestry of the University of California. He shall receive a salary of three thousand dollars per annum, and shall be authorized and empowered to appoint an assistant forester and a deputy forester by and with the consent of the State Board of Forestry. The salaries of said assistant and deputy foresters shall be fixed by the State Board of Forestry and shall not exceed eighteen hundred dollars each per annum. Said assistant and deputy foresters shall hold office at the pleasure of the State Forester. The State Forester shall maintain headquarters at the state capitol and shall be allowed necessary office and contingent expenses. He and his assistants shall be paid reasonable traveling and field expenses which may be incurred in the performance of their official duties. He shall act as secretary of

the State Board of Forestry. He shall, under the supervision of the State Board of Forestry, execute all matters pertaining to forestry within the jurisdiction of the state; have charge of all firewardens in the state, and direct and aid them in their duties; direct the protection and improvement of state parks and forests; collect data relative to forest destruction and conditions; take such action as is authorized by law to prevent and extinguish forest, brush, and grass fires; look after the enforcement of all laws pertaining to the protection of lands; publish, from time to time, under the direction of the State Board of Forestry, information concerning forestry, and perform such other duties under this act as the State Board of Forestry may direct; prepare annually a report to the governor on the progress and condition of state forest work, and make such recommendations therein concerning forestry as he may see fit. The assistant and deputy foresters shall perform such duties as may be prescribed by the State Forester.

SEC. 4. The State Forester shall be chief firewarden of the state. He shall have supervision and control of the firewardens appointed by virtue of this act, and shall have power and authority, under the State Board of Forestry, to carry into effect any system of fire prevention and suppression provided for in this act.

SEC. 5. Under such general policy as to qualifications, numbers, and localities as shall be prescribed by the State Board of Forestry, the said board is authorized to appoint firewardens, who shall have all the powers given to firewardens under the state laws, but shall serve voluntarily or under compensation from other sources than the State Board of Forestry.

SEC. 6. In times or localities of particular fire danger, or to enforce the fire laws, or to apprehend and prosecute violators thereof, the State Board of Forestry shall have power to appoint and employ, either independently or jointly with other agencies, such additional firewardens, and to furnish them such assistance and facilities for protecting life or property from fire, as the public safety may demand; and unless contributed by other sources, the compensation of the firewardens in this section provided shall be paid for out of any money appropriated to the use of the State Board of Forestry.

SEC. 7. Firewardens shall have authority to issue permits to burn brush, inflammable debris or rubbish under such general rules and regulations as the State Board of Forestry may prescribe, and under such special stipulations regarding the time and circumstances of the burning as shall seem necessary for the safeguarding of life or property. Firewardens shall have authority to call upon able-bodied persons for assistance in combating forest fires. Firewardens while in the performance of their duty as such shall have the right to enter into and upon any lands and premises other than a dwelling or other house.

SEC. 8. The State Board of Forestry is hereby empowered to enter into agreements with persons, firms, associations or corporations owning or controlling forest land, or with any combinations or groups of such persons, firms, associations or corporations, for the purpose of cooperation in the employment of men and facilities and taking other measures for prevention and control of forest, brush, or grass fires. Such agreements shall designate the lands or districts over which protective measures shall be maintained and the nature, extent and participation of the parties to such agreements in the expenditures that may be incurred for patrol and other measures for fire fighting and fire protection. For the purpose of carrying out the provisions of such agreements the State Board of Forestry shall appoint firewardens to be named by the person, firm, association or corporation or combination or group of such persons, firms, associations or corporations with whom such agreement is made. Such firewardens may be given charge, under the State Forester, of all matters of fire prevention within such districts and upon such lands, so long as an effective system of fire protection is maintained thereon under the provisions of such cooperative agreement. The appointment of any such firewarden shall be revocable at the pleasure of the State Board of Forestry and shall be revoked at the request of the person, firm, association, corporation or combination or group thereof upon whose nomination said appointment was made; but when said appointment shall be revoked, said person, firm, association, corporation or combinations or groups thereof shall immediately nominate another firewarden, and said State Board of Forestry shall

appoint the same. The State Board of Forestry is further empowered to enter into agreements with the federal government upon such terms as may be deemed advisable or as may be provided by law, for the purpose of cooperating in the prevention and suppression of forest fires. All sums chargeable to the state on account of any cooperative agreement as provided in this section shall be paid from the appropriation for fire protection.

SEC. 9. Any fire in any forest or other land burning uncontrolled and without proper precaution being taken to prevent it from spreading, or which endangers life or property, is hereby declared to be a public nuisance; and any person, firm, association or corporation owning or controlling land upon which such nuisance exists is hereby required to abate it immediately by controlling or extinguishing it. And if said owner or controller shall fail, refuse or neglect to abate said nuisance the State Forester may summarily abate said nuisance.

SEC. 10. All forest areas containing inflammable debris, which by reason of the location or condition or lack of protection thereof may endanger life or property, are hereby declared to be public nuisances. If such a nuisance exists, the State Forester shall in writing notify the owner, lessee, the person in control, or the agent of said owner or lessee of the land on which said nuisance is situated of the existence of such nuisance and shall require that such nuisance be abated within a period and in a manner specified in such notice. But the State Forester may, for good cause shown, extend the time in which such nuisance shall be abated. Whenever such nuisance exists and the proper notice shall have been served, and the period specified in such notice, or any extension thereof, shall have elapsed, without the nuisance having been abated, it shall be the duty of the State Forester to cause the same to be summarily abated. Any notice provided for in this section shall be served in a like manner as a summons in a civil action, as provided in sections 410 to 415 inclusive, of the Code of Civil Procedure.

SEC. 11. The expense of the summary abatement of nuisances as provided in this act shall be paid from the money appropriated for fire protection. Any and all expenses incurred for the summary abatement of a nuisance under the provisions of this act shall be and become a lien on the lands upon which such nuisance shall have existed, the said expenses to be prorated among the owners of such lands according to the acreage belonging to said owners on which said nuisance was situated. Action to foreclose such lien shall be begun within one year. No such lien shall be filed or accrue upon the land of any person, firm, corporation or association, who in good faith endeavors to abate any nuisance mentioned in this act, or who maintains a protective system established under agreement with the State Board of Forestry as specified in section eight (8) of this act, or who is operating under a cooperative agreement for fire protection with the Federal Forest Service, which agreement is certified to the State Board of Forestry as effective by the head of the Federal Forest Service in California and approved by the State Board of Forestry. Such lien shall be filed by the State Forester or under his direction by any of his assistants or firewardens within ninety days after the abatement of such nuisance. Proceedings for the satisfaction of such lien shall be instituted, at the request of the State Board of Forestry and in the name of the people of the State of California, by the district attorney of the county in which such nuisance was abated; and the costs shall be recovered in the usual manner.

SEC. 12. The district attorney of any county who may bring action on behalf of the state to satisfy any lien created by the provisions of this act shall receive as compensation for his services 10 per cent of the amount recovered. Such compensation shall be in addition to that allowed by law for fees and salaries of district attorneys.

SEC. 13. Owners, lessees, or persons in control of lands upon which fires may be started or burning are not relieved by any of the provisions of this act from the duty of extinguishing or controlling such fires; and no such owner or lessee or persons in control or any person in the employ of such owner or lessee or person in control shall receive any compensation under this act for extinguishing or controlling fire occurring upon or threatening the lands of such owner or lessee or person in control.

SEC. 14. All moneys recovered under the provisions of the penal sections of the forest laws of this state shall be paid, less the costs of and compensation for collection, into the treasury of the county in which such money was collected.

SEC. 15. Every firewarden appointed under the provisions of this act shall be provided by the State Board of Forestry with a badge of authority which shall be produced and shown whenever demand is made for such production.

SEC. 16. Wherever in this act the performance or nonperformance of any act or thing is made a misdemeanor, the person, or the officer, member, manager, agent, director, or employee of any firm, association, or corporation who shall direct the performance or nonperformance of such act or thing is likewise and in the same manner guilty of a misdemeanor and shall be punished in a like manner as the person actually performing such act or thing.

SEC. 17. The State Forester shall post or cause to be posted in a conspicuous place copies of fire-warning notices and other notices prescribed by the State Board of Forestry to be posted in such manner as may be directed by the State Board of Forestry; and any person who shall remove, destroy, deface or cover up any such notice shall be guilty of a misdemeanor.

SEC. 18. For the purpose of this act the word "forest" shall be taken to mean and to comprise lands wholly or in part covered with timber, brush or other similar inflammable vegetation.

SEC. 19. Chapter 264 of the laws of 1905 as amended April 7, 1911, and all acts and parts of acts in conflict with the provisions of this act are hereby repealed.

SEC. 20. This act shall be known and designated as the "forest-fire act."

This bill received the pocket veto by the Governor.

FOREST LAWS OF CALIFORNIA NOW IN OPERATION.

Organization of State Forest Work.

CHAPTER 264.

(Laws of 1905, page 235.)

An act to provide for the regulation of fires on, and the protection and management of, public and private forest lands within the State of California, creating a state board of forestry and certain officers subordinate to said board, prescribing the duties of such officers, creating a forestry fund, and appropriating the moneys in said fund, and defining and providing for the punishment of certain offenses for violations of the provisions of this act, and making an appropriation therefor.

SECTION 1. *State Board of Forestry.*—There shall be a State Board of Forestry, consisting of the Governor, secretary of state, attorney general and State Forester, which shall supervise all matters of state forest policy and management and convene upon the call of the Governor or of its secretary.

SEC. 2. *State Forester and his duties.*—There shall be a State Forester, who shall be a civil executive officer, and who shall be a technically trained forester, appointed by the governor to hold office at the pleasure of the appointing power; and whether any candidate for the position is a technically trained forester shall be determined by certificate from the secretary of the United States department of agriculture, or from the department of forestry of the state university after such department is established. He shall receive a salary of twenty-four hundred dollars per annum, and shall be authorized and empowered to appoint two assistant foresters, whose salaries shall not exceed twelve hundred dollars per annum. He shall maintain headquarters at the state capitol in an office provided by the secretary of state, and shall be allowed necessary office and contingent expenses. He and his assistants shall be paid reasonable traveling and field expenses which may be incurred in the performance of their official duties. He shall act as secretary of the State Board of Forestry. He shall, under the supervision of the State Board of Forestry,

execute all matters pertaining to forestry within the jurisdiction of the state; have charge of all firewardens in the state, and direct and aid them in their duties; direct the protection and improvement of state parks and forests; collect data relative to forest destruction and conditions; take such action as is authorized by law to prevent and extinguish forest, brush, and grass fires; enforce all laws pertaining to forest and brush covered land, and prosecute for any violation of such laws; cooperate with landowners, as described in section four in this act; and publish from time to time such information of forestry as he may deem wise. He shall prepare annually a report to the governor on the progress and condition of state forest work, and recommend therein plans for improving the state system of forest protection, management and replacement.*

SEC. 3. *Supervision and care of state parks.*—The California Redwood Park and the Mount Hamilton tract, together with all moneys heretofore or hereafter appropriated for the purchase of land for or care of said parks, tracts and stations, shall be in charge of the State Board of Forestry, said board to take the place of and forthwith shall have all the powers and duties now possessed in accordance with law by persons or commissions with regard to the state parks, tracts of land, and forest stations mentioned in this act, and also any forest or brush land which may hereafter become state property, or be placed definitely in the care of the state; and it is hereby further enacted that, if the government of the United States or any individual or corporation shall, at any time, donate or intrust to the State of California, for state park or state forest reserve purposes, any tract or tracts of wholly or partially wooded land, such tract or tracts of land shall be administered at the expense of the state, as provided by law.**

SEC. 4. *Cooperative work.*—The State Forester shall, upon request and whenever he deems it essential to the best interests of the people and the state, cooperate with counties, towns, corporations, and individuals in preparing plans for the protection, management and replacement of trees, woodlots and timber tracts, on consideration and under an agreement that the parties obtaining such assistance pay at least the field expenses of the men employed in preparing said plans.

SEC. 5. *Publication of laws and notices.*—The State Forester shall prepare and print for public distribution an abstract of all the forest laws of California, together with such rules and regulations in accord therewith, as he may deem necessary, and shall annually print and distribute a list of all firewardens with their addresses, all such matter to be published with the approval of the State Board of Forestry. He shall also furnish notices, printed in large letters on cloth, calling attention to the danger from forest fires, and to forest fire and trespass laws and their penalties. Such notices shall be posted by the firewardens in conspicuous places along every highway in brush and forest-covered country, at frequent intervals along streams and lakes frequented by tourists, hunters and fishermen, at established camping sites, and in every post office in the forested region.

SEC. 6. *Fire districts.*—The State Forester shall divide the state into such number of fire districts as shall be deemed by him most necessary to the efficiency of his work; and, furthermore, any county, or combination of less than four counties, shall be made a separate fire district, upon request of the county board or boards of supervisors, in which case such special fire district shall pay the cost of maintaining its district firewardens.†

*Salary of State Forester increased in 1909 to \$3,000. Provision regarding two assistant foresters amended at same time to one deputy forester at \$1,800, and one assistant forester at \$1,600.

**One such tract was donated in 1909 by Mrs. Annie Bidwell of Chico. The California Redwood Park is now in charge of a commission appointed by the Governor. Chap. 12, Laws of 1911. (Approved February 6, 1911.)

†The original bill as presented to the legislature provided for five district firewardens to be paid by the state. This provision was not enacted into law and in consequence section 6 has no meaning.

SEC. 7. *Duties of assistant foresters.*—The duties of the assistant foresters shall be to devote their entire time to state forest interests according to rules and directions to be determined by the State Forester, with the approval of the State Board of Forestry. They shall take prompt measures to prevent and extinguish forest fires; keep a record of the cause, extent and damage of all forest fires in their respective districts, and perform such other duties as the State Forester may direct.

SEC. 8. *Voluntary firewardens and their duties.*—The State Forester shall appoint, in such number and localities as he deems wise, public-spirited citizens to act as voluntary firewardens, who may receive payment for their services from the counties or from private sources. They shall promptly report all fires and take immediate and active steps toward their extinguishment, report any violation of the forest laws, assist in apprehending and convicting offenders, and perform such other duties as the State Forester may direct. The supervisors and rangers on the federal forest reserves within the state, whenever they formally accept the duties and responsibilities of firewardens, may be appointed as voluntary firewardens, and shall have all the powers given to firewardens by this act.

SEC. 9. *Powers and requirement of firewardens.*—The State Forester and all firewardens shall have the powers of peace officers to make arrests without warrant, for violations of any state or federal forest laws, and no firewarden shall be liable to civil action for trespass committed in the discharge of his duties. Any firewarden who has information which would show with reasonable certainty, that any person had violated any provision of such forest laws, shall immediately take action against the offender, either by using his own powers as a peace officer or by making complaint before the proper magistrate, or by information to the proper district attorney, and shall obtain all possible evidence pertaining thereto. Failure on the part of any *paid* firewarden to comply with the duties prescribed in this act shall be a misdemeanor, and punishable by a fine of not less than twenty dollars nor more than two hundred and fifty dollars, or imprisonment for not less than ten days nor more than three months, or both such fine and imprisonment and the State Forester is hereby authorized to investigate and prosecute such violations.

SEC. 10. *Assistance of citizens in fighting fire.* (Penal Code, sec. 384, subsec. 5.)

SEC. 11. *Fire patrol.*—In times and localities of particular fire danger the State Forester may maintain a fire patrol through the firewardens, at such places in brush or forest land, as the public interest may require, the expense of such patrol to be paid by the county in which such patrol is maintained; and, furthermore, he may, upon written request by counties, corporations or individuals, maintain a fire patrol on their forest lands; *provided*, that the expense of said patrol be paid by the party or parties requesting same.

SEC. 12. *District attorneys to prosecute vigorously.*—Whenever an arrest shall have been made for violation of any provision of this act, or whenever any information of such violation shall have been lodged with him, the district attorney of the county in which the criminal act was committed must prosecute the offender or offenders with all diligence and energy. If any district attorney shall fail to comply with the provisions of this section he shall be guilty of a misdemeanor, and upon conviction shall be fined not less than one hundred dollars nor more than one thousand dollars, in the discretion of the court. Action against the district attorney shall be brought by the attorney general in the name of the people of the state on the relation of the State Forester. The penalties of this section shall apply to any magistrate, with proper authority, who refuses or neglects to cause the arrest and prosecution of any person or persons when complaint, under oath, of violation of any terms of this act has been lodged with him.

SEC. 13. *Destruction of warning notices.*—Any person who shall destroy, deface, remove or disfigure any sign, poster or warning notice posted under the provisions of this act shall be guilty of a misdemeanor and punishable, upon conviction, by a fine of not less than fifteen dollars nor more than one hundred dollars, or imprisonment in the county jail for a period of not less than ten days nor more than three months, or both such fine and imprisonment.

SEC. 14. *Wilfully, maliciously and negligently setting forest fires.*—(Penal Code, sec. 384, subsec. 1.)

SEC. 15. *Extinguishment of camp fires.*—(Penal Code, sec. 384, subsec. 6.)

SEC. 16. *Restriction of use of fire during a dry season.*—(Penal Code, sec. 384, subsec. 3.)

SEC. 17. *Engines in forest land.*—(Penal Code, sec. 384, subsec. 4.)

SEC. 18. *Civil liability for forest fires.*—In addition to the penalties provided in this act, the United States, state, county, or private owners, whose property is injured or destroyed by such fires, may recover in a civil action, double* the amount of damages suffered if the fires occurred through wilfulness, malice or negligence; but if such fires were caused or escaped accidentally or unavoidably, civil action shall lie only for the actual damage sustained as determined by the value of the property injured or destroyed, and the detriment to the land and vegetation thereof. The presumption of wilfulness, malice or neglect shall be overcome; *provided*, that the precautions set forth are observed; *or provided*, fires are set during a "dry season" with written permission of and under the direction of the district firewarden. *Persons or corporations causing fires by violations of this act shall be liable to the state or county in action for debt, to the full amount of all expenses incurred by the state or county in fighting such fires.*

Section 19 of the above entitled act, approved March 18, 1905, is hereby amended so as to read as follows:

SEC. 19. *Inspection of forest area.*—It shall be the duty of the State Board of Forestry, whenever it shall be deemed necessary, to notify the owner of any forest area within the state by a written notice to be served upon the person or persons or corporation, or either of them, owning or having charge of such area, or upon the agents, attorney or representative of either, by any firewarden, deputy firewarden or special firewarden or any employee of the State Board of Forestry, in the same manner as a summons in a civil action, or if such area belongs to any nonresident person or corporation and there is no person in control or possession thereof, and such nonresident person or corporation has no tenant, attorney, representative or agent upon whom such service can be had, or if the owner or owners of such area or their tenants, attorneys, representatives, or agents, can not after due diligence be found, then by posting said notice in some conspicuous place upon such area and by mailing a copy thereof to the owner thereof at his last known place of residence if the same is known or can be ascertained, that the said State Board of Forestry intends to cause an inspection to be made of the said forest area for the purpose of ascertaining whether or not the same constitutes a nuisance as hereinafter provided. The said notice shall describe the forest area to be inspected by general description and shall designate the time of such inspection. At the time so designated in said notice the said State Board of Forestry shall cause an inspection to be made of the said forest area and the said owner or his agent shall be permitted to be present during such inspection and shall be given a full opportunity of showing that such forest area is not a nuisance as contemplated by this act. If the said State Board of Forestry after such inspection finds any forest area inadequately protected adjoining, lying near, or intermingled with other forest and covered wholly or in part with inflammable debris, which by reason of such location or condition or lack of protection endangers life or property, the State Board of Forestry shall in writing notify the owner or owners of such areas that the condition of said areas endangers life or property and shall require such person or corporation to clean up such areas by the use of fire or otherwise at a time and in a manner to be therein specified. Said notice may be served upon the person or persons or corporation or either of them, owning or having charge of such areas or upon the agents of either, by any firewarden, deputy firewarden or special firewarden or any employee of the State Board

*Section 3344 of the Political Code states that "Every person negligently setting fire to his own woods, or negligently suffering any fire to extend beyond his own land, is liable in treble damages to the party injured." Treble damages are changed to double damages by the above section.

of Forestry, in the same manner as a summons in a civil action; *provided, however*, that if any such area belong to any nonresident person or corporation and there is no person in control or possession thereof and such nonresident person or corporation has no tenant, bailee, depository or agent upon whom such service can be had; or if the owner or owners of such areas can not after due diligence be found, then such notice may be served by posting the same in some conspicuous place upon such area, and by mailing a copy thereof to the owner thereof at his last known place of residence, if the same is known or can be ascertained. Any and all such inadequately protected forest areas adjoining, lying near, or intermingled with other forest and covered wholly or in part with inflammable debris, which by reason of such location or condition or lack of protection endangers life or property, are hereby declared to be a public nuisance; and whenever any such nuisance shall exist within the state, and the proper notice shall have been served, as herein provided, and the time specified in said notice shall have elapsed without the nuisance having been abated, it shall be the duty of the State Board of Forestry to cause said nuisance to be at once abated, by burning or otherwise disposing of the inflammable debris. The expense thereof shall be paid by the state in like manner as bills for fire fighting are paid. Any and all such sum or sums so paid shall be and become a lien on the property from which said nuisance has been removed or abated in pursuance of this section, and said lien shall continue as long as the said sum or sums above referred to shall remain unpaid. The claim for any lien shall be filed by the State Forester, or under his direction, by any of his assistants or firewardens, in the office of the county recorder of the county in which the property on which said nuisance existed is situated. Proceedings for the enforcement of such lien shall be instituted by the district attorney of the county where the nuisance existed, at the request of the State Board of Forestry and in the name of the State of California as claimant; and the costs shall be recovered in the usual manner. The State Board of Forestry is hereby vested with the power to cause any and all such nuisances to be abated in a summary manner.

SEC. 20. *Disposal of moneys received as penalties.*—All moneys received as penalties for violations of the provisions of this act, less the cost of collection, and not otherwise provided for, shall be paid into the state treasury to the credit of the forestry fund, which fund is hereby created, and the moneys therein are hereby appropriated for purposes of forest protection, management and replacement under direction of the State Board of Forestry.*

SEC. 21. *Moneys for forest purposes.*—County boards of supervisors may appropriate money for purposes of forest protection, improvement and management.

SEC. 22. *Payment of expenses under this act.*—There is hereby appropriated for the fifty-seventh and fifty-eighth fiscal years, the sum of seventeen thousand six hundred dollars (\$17,600) for carrying out the provisions of this act, and for the payment of all salaries and expenses herein provided for.

SEC. 23. All acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

County Cooperation.

The provisions made by the above sections 4, 6, 8, 11, 19 and 21 for the cooperation of counties with the state is supplanted by the following act (Stats. 1905, 394) :

SECTION 4. A new section is hereby added to the act to establish a uniform system of county and township governments, to be numbered 33½, and to read as follows :

Section 33½. To appropriate from the general fund of the county, unless otherwise provided, not exceeding in counties of the first and second class the sum of twenty thousand dollars, and in all other counties not exceeding the sum of ten thousand dollars in any one year, to aid and carry on the work of the preservation of forests upon public lands, the reforestation of forests upon public lands and the protection of forests upon public lands from fire.

*The moneys collected to go to the county.

Fire Laws and Penalties.

CHAPTER 699.

An act to amend section 384 of the Penal Code, relating to forest fires.

(Approved May 1, 1911.)

The people of the State of California, represented in senate and assembly, do enact as follows:

Setting fire wilfully or negligently.

384. Any person who shall wilfully or negligently commit any of the acts herein-after enumerated in this section shall be guilty of a misdemeanor, and upon conviction thereof be punishable by a fine of not less than fifty nor more than five hundred dollars, or imprisonment in the county jail not less than fifteen days nor more than six months, or both such fine and imprisonment, except that in the case of an offense against subsection five of this section, the fine imposed may be not less than ten dollars.

1. *Back-firing.*

Setting fire, or causing or procuring fire to be set to any forest, brush or other inflammable vegetation growing on lands not his own, without the permission of the owner of such land; *provided*, that no person shall be convicted under this section who shall have set, in good faith and with reasonable care, a back-fire for the purpose of stopping the progress of a fire then actually burning.

2. *Allowing fire to escape.*

Allowing fires to escape from the control of the persons having charge thereof, or to spread to the lands of any person other than the builder of such fire without using every reasonable and proper precaution to prevent such fire from escaping.

3. *Carelessness with fire.*

Burning brush, stumps, logs, rubbish, fallen timber, fallows or grass on his own land, or blasting with dynamite, powder or other explosives, or setting off fireworks in forest or brush covered land, either his own or the property of another, without taking every proper and reasonable precaution both before the lighting of said fire and at all times thereafter to prevent the escape thereof; *provided*, that any fire-warden may, in his discretion, give a written permit to any person desiring to burn or blast as aforesaid; such permit shall contain such rules and regulations for the building and management of such fires as the State Board of Forestry may from time to time prescribe; and in any prosecution under this subsection it shall be prima facie evidence that the defendant has taken proper and reasonable precautions to prevent the escape of such fire, when he shall show that he has received such a permit and has complied with all the rules and regulations therein prescribed.

4. *Locomotives, engines and boilers.*

Using any logging locomotive, donkey or threshing engine, or any other engine or boiler, in or near any forest, brush or grass land, unless he shall prove upon trial, affirmatively, that such engines or boilers used by him were provided with adequate devices to prevent the escape of fire or sparks from smokestacks, ashpans, fireboxes, or other parts, and that he has used every reasonable precaution to prevent the causing of fire thereby.

5. *Obliged to fight fire when called upon.*

Refusing or failing to render assistance in combating fires at the summons of any firewarden unless prevented by good and sufficient reasons.

6. *Allowing fires to escape.*

Leaving fire burning or unextinguished on departing from a camp or camping place, or allowing such fire to spread after being built.

7. *Municipal corporation.*

The provisions of this section shall not apply to the setting of fire on lands within any municipal corporation of the state.

SEC. 2. All acts and parts of acts in conflict herewith are hereby repealed.

MALICIOUSLY SETTING FIRE.

Penal Code, Sec. 600. Every person who wilfully and maliciously burns any bridge exceeding in value fifty dollars, or any structure, snowshed, vessel or boat, not the subject of arson, or any tent, or any stack of hay or grain or straw of any kind, or any pile of baled hay or straw, or any pile of potatoes, or beans, or vegetables, or produce, or fruit of any kind, whether sacked, boxed, or crated, or not, or any growing or standing grain, grass, or trees, or any fence, or any railroad car, lumber, cord wood, railroad ties, telegraph or telephone poles, or shakes, or any tule land or peat ground, of the value of twenty-five dollars or over, not the property of such person, is punishable by imprisonment in the state prison for not less than one year nor more than ten years.

UNLAWFUL CUTTING AND INJURY.

Timber Trespass a Misdemeanor.

Penal Code, Sec. 602. Every person who wilfully commits trespass by either—

1. Cutting down, destroying, or injuring any kind of wood or timber standing or growing upon the lands of another; or,
2. Carrying away any kind of wood or timber lying on such lands—is guilty of a misdemeanor.

Civil Liability for Timber Trespass.

Civil Code, Sec. 3346. For wrongful injuries to timber, trees or underwood, upon the lands of another, or removal thereof, the measure of damages is three times such a sum as would compensate for the actual detriment, except where the trespass was casual and involuntary, or committed under the belief that the land belonged to the trespasser, or where the wood was taken by the authority of highway officers for the purposes of a highway; in which cases the damages are a sum equal to the actual detriment.

Code of Civil Procedure, Sec. 733. Any person who cuts down or carries off any wood or underwood, tree or timber, or girdles or otherwise injures any tree or timber on land of another person, * * * without lawful authority, is laible to the owner of such land * * * for treble the amount of damages which may be assessed therefor, in a civil action, in any court having jurisdiction.

Code of Civil Procedure, Sec. 734. Nothing in the last section authorizes the recovery of more than the just value of the timber taken from uncultivated woodland, for the repair of a public highway or being upon the land adjoining it.

NOTE.—The Political Code, section 3345, states that “Whenever the woods are on fire any justice of the peace, constable or road overseer of the township or district where the fire exists, may order as many of the inhabitants liable to poll tax, residing in the vicinity, as may be deemed necessary, to repair to the place of the fire and assist in stopping, or extinguishing it.” It may sometimes be necessary for fire fighters to take advantage of this privilege where no firewarden is available.

FORTY-SIXTH ANNUAL REPORT

OF THE

INSURANCE COMMISSIONER OF THE STATE OF CALIFORNIA

INSURANCE DEPARTMENT, SAN FRANCISCO, July 25, 1914.

To His Excellency HIRAM W. JOHNSON,
Governor of the State of California.

SIR: In compliance with the provisions of section 596 of the Political Code, I respectfully submit the Forty-sixth Annual Report of the Insurance Department of the State of California, containing a statement of the collections and disbursements of the department, a synopsis of the statements of all insurance companies, fraternal societies and other corporations under its control during said year, together with statistical tables and other information pertaining to all classes of insurance business covering the calendar year ending December 31, 1913.

The total number of insurance companies and associations, except fraternal insurance societies, authorized to transact business in the State of California during the year ending December 31, 1913, was 327, classified as follows:

CALIFORNIA COMPANIES.

Fire and Marine (Stock)	5
Fire and Marine (Mutual)	1
Life (Legal Reserve)	8
Life (Assessment)	2
Accident and Health (Assessment)	2
County Mutual Fire	22
Miscellaneous Casualty (Stock)	15
Inter-Insurance Associations	6
Total	61

COMPANIES OF OTHER STATES.

Fire and Marine (Stock)	100
Fire and Marine (Mutual)	9
Life (Legal Reserve)	40
Life (Assessment)	3
Accident and Health (Assessment)	3
Miscellaneous Casualty (Stock)	49
Inter-Insurance Associations	9
Total	213

COMPANIES OF FOREIGN COUNTRIES.

Fire and Marine (Stock)	47
Miscellaneous Casualty (Stock)	6
Total	53
Grand total	327

The above shows an increase of 21 in the total number of insurance companies authorized to transact business in California during the year 1913, as compared with the preceding year.

In addition to the foregoing, 32 brokers were licensed under section 596 of the Political Code to write "Surplus Line" insurance.

Live Stock	9,622 07	7,810 00
Medical Defense	14,466 89	1,555 05
Miscellaneous (Interinsurance)	166,077 45	48,545 05
Totals	\$47,583,913 55	\$20,042,595 92

FIRE INSURANCE.

(Surplus Line and County Mutual Excepted.)

The total number of companies and associations authorized to transact the business of fire insurance in California during 1913 was 148. Of these, 9 were organized under the laws of California, 111 were from other states and 28 were foreign organizations.

The following comparisons show an increase in the amount written, a decrease in premiums received and an increase in losses paid during 1913 as compared with the preceding year:

Amount written in 1913	\$1,128,543,117 00
Amount written in 1912	1,037,122,915 00
Increase	\$91,420,202 00
Premiums received in 1913	\$15,897,255 09
Premiums received in 1912	16,258,040 76
Decrease of	\$360,785 67
Losses paid during 1913	\$7,101,298 64
Losses paid during 1912	5,569,008 87
Increase	\$1,532,289 77

Fourteen new companies and associations were licensed to transact the business of fire insurance during 1913.

COMPANIES (STOCK).

British American Assurance Company	Toronto, Canada.
Citizens' Fire Insurance Company	Baltimore, Md.
Commercial Fire Insurance Company of the District of Columbia	Washington, D. C.
First National Fire Insurance Company	Washington, D. C.
Hamburg Bremen Fire Insurance Company	Hamburg, Germany.
Knickerbocker Insurance Company	New York, N. Y.
Netherlands Fire and Life Insurance Company	The Hague
Northwestern Fire and Marine Insurance Company	Minneapolis, Minn.
Sterling Fire Insurance Company	Indianapolis, Ind.
Williamsburgh City Fire Insurance Company	New York, N. Y.

COMPANIES (MUTUAL).

Indemnity Exchange Mutual Fire Insurance Company	Los Angeles, Cal.
Oregon Fire Relief Association	McMinnville, Ore.

INTER-INSURANCE ASSOCIATIONS.

Lumber Manufacturers' Inter-Insurance Association	New York, N. Y.
Property Underwriters' Association	San Francisco, Cal.

The following summary shows the amount of risks written, premiums received, losses paid, and ratio of losses to premiums, comparing business transacted by California companies, companies of other states, companies of foreign countries, and the totals thereof:

	California companies	Companies of other states	Companies of foreign countries	Totals
Amount written	\$56,442,782 00	\$734,336,458 00	\$337,763,877 00	\$1,128,543,117 00
Premiums received	910,972 69	10,237,927 86	4,748,354 54	15,897,255 09
Losses paid	367,860 83	4,623,431 79	2,110,006 02	7,101,298 64
Ratio of losses to premiums	40.3	45.1	44.4	44.6

The foregoing figures show that 5 per cent of the fire insurance business was written by California companies with a loss ratio of 40.3 per cent; 95 per cent by companies of other states with a loss ratio of 45.1 per cent; and 30 per cent by companies of foreign countries with a loss ratio of 44.4 per cent.

The following tabulation shows that during the past thirty years the fire insurance companies have received in premiums in California \$263,420,735.34, and paid out in losses \$248,891,319.40:

	Premiums received	Losses paid	Ratio of losses to premiums
1884	\$4,538,062 44	\$1,295,594 48	28.5
1885	4,540,883 39	2,033,257 05	44.8
1886	5,185,772 23	2,654,371 08	51.2
1887	5,590,353 89	2,101,482 52	37.6
1888	6,087,041 48	3,049,030 42	50.1
1889	6,158,754 64	2,572,001 93	41.7
1890	6,303,324 05	2,753,392 22	43.7
1891	6,669,998 72	2,408,156 05	36.1
1892	6,975,185 15	2,715,819 95	38.9
1893	6,780,453 93	2,667,160 24	39.4
1894	6,336,734 55	2,815,671 30	44.4
1895	4,704,584 11	2,850,672 07	60.6
1896	3,817,316 18	2,645,397 45	69.3
1897	4,767,019 28	2,637,706 71	55.3
1898	6,657,887 55	3,578,294 69	53.7
1899	5,545,260 51	2,882,973 60	52.0
1900	5,795,506 75	2,430,242 35	41.9
1901	7,522,401 88	2,344,581 05	31.2
1902	7,339,984 39	2,655,301 58	36.2
1903	8,288,354 90	4,342,785 60	52.4
1904	10,104,033 49	3,830,252 77	38.1
1905	10,353,808 04	3,883,540 20	37.5
1906	13,368,350 87	146,306,376 92	1,094.4
1907	16,242,105 95	7,008,035 97	43.1
1908	14,442,623 40	5,345,988 35	37.0
1909	15,094,210 60	5,795,279 57	38.4
1910	15,900,524 11	6,013,423 48	37.8
1911	16,154,903 01	4,604,219 19	28.5
1912	16,258,040 76	5,569,008 97	34.3
1913	15,897,255 09	7,101,298 64	44.6
Totals	\$263,420,735 34	\$248,891,319 40	

The ratio of losses to premiums on fire risks for the thirty-eight years next preceding is shown by the following tabulation:

1876	32.2	1886	51.2	1893	69.3	1905	37.5
1877	31.2	1887	37.6	1897	55.3	1906	1,094.4
1878	26.3	1888	50.1	1898	53.8	1907	43.1
1879	32.5	1889	41.7	1899	52.0	1908	37.0
1880	32.5	1890	43.7	1900	41.9	1909	38.4
1881	33.3	1891	36.1	1901	31.2	1910	37.8
1882	39.9	1892	38.9	1902	33.2	1911	28.5
1883	39.1	1893	39.4	1903	52.4	1912	34.3
1884	28.5	1894	44.4	1904	38.1	1913	44.6
1885	44.8	1895	60.6				

"SURPLUS LINE" FIRE INSURANCE.

Nineteen brokers transacted the business of surplus line fire insurance in California during 1913, under the provisions of section 596 of the Political Code.

The returns made show a decrease as shown by the following comparisons:

Net amount procured in 1913	\$2,018,357 50
Net amount procured in 1912	2,706,117 32
Decrease	\$687,759 82
Net Premiums collected in 1913	\$45,234 33
Net Premiums collected in 1912	57,495 96
Decrease	\$12,261 63

COUNTY FIRE MUTUALS.

Twenty-two County Mutual fire insurance companies transacted business in California during 1913. The business transacted during 1913 shows an increase in amount written over that written in 1912; a decrease in premiums received, and an increase in losses paid. The comparisons are as follows:

Amount written in 1913	\$11,043,161 00
Amount written in 1912	11,011,446 00
Increase	\$31,715 00
Premiums and Assessments received in 1913	\$98,594 11
Premiums and Assessments received in 1912	112,098 49
Decrease	\$13,504 38
Losses paid in 1913	\$71,905 04
Losses paid in 1912	53,269 78
Increase	\$18,635 26

One new County Mutual fire insurance company was licensed to transact business in California during 1913, namely:

Farmers' Mutual Fire Insurance Company of Mendocino County,
Fort Bragg.

MARINE INSURANCE.

The total number of companies transacting marine insurance business in California during 1913 was 40.

The returns made by the companies transacting this character of business show an increase in amount written in 1913 over that written in 1912 of \$127,828,427.00, and a decrease in the amount of premiums received of \$202,925.93; with an increase in the losses paid of \$1,232,086.81.

The comparisons are as follows:

Amount written in 1913	\$600,371,909 00
Amount written in 1912	472,543,482 00
Increase	\$127,828,427 00
Premiums received in 1913	\$2,464,976 07
Premiums received in 1912	2,667,902 00
Decrease	\$202,925 93
Losses paid in 1913	\$2,011,324 81
Losses paid in 1912	779,238 00
Increase	\$1,232,086 81

The following summary shows the amount of risks written, premiums received, losses paid, and ratio of losses to premiums, comparing business transacted by California companies, companies of other states, companies of foreign countries, and the totals thereof.

	California companies	Companies of other states	Companies of foreign countries	Totals
Amount written	\$89,220,598 00	\$109,521,987 00	\$401,629,324 00	\$300,371,909 00
Premiums received	393,682 06	876,577 31	1,194,716 70	2,464,976 07
Losses paid	198,926 81	613,942 43	1,198,455 54	2,011,324 81
Ratio of losses to premiums	50.5	70.0	100.3	81.5

These figures show that 14.9 per cent of the marine business was written by California companies with a loss ratio of 50.5 per cent; 18.2 per cent by companies of other states with a loss ratio of 70.0 per cent; and 66.9 per cent by companies of foreign countries with a loss ratio of 100.3 per cent.

The following tabulation shows that during the past thirty years the marine insurance companies have received in premiums \$50,930,754.19 and paid out in losses \$30,738,977.57:

	Premiums received	Losses paid	Ratio of losses to premiums
1884	\$1,433,138 20	\$468,410 85	32.7
1885	1,395,993 67	855,630 41	61.3
1886	1,515,279 79	676,325 30	43.8
1887	971,859 86	583,772 27	60.1
1888	1,752,696 58	955,239 49	54.5
1889	1,602,434 12	926,811 88	57.8
1890	1,526,453 95	1,109,431 64	72.7
1891	1,927,088 44	736,735 18	38.2
1892	1,638,876 63	1,059,120 83	64.6
1893	1,354,439 13	808,792 67	59.7
1894	1,113,840 90	418,106 22	37.5
1895	1,249,317 11	887,761 60	71.1
1896	1,418,739 79	819,221 66	57.7
1897	1,689,658 74	1,375,911 66	81.4
1898	1,789,140 56	765,624 90	42.8
1899	1,557,487 19	818,261 22	52.5
1900	1,938,123 83	1,134,047 78	58.5
1901	1,802,525 31	978,308 20	54.3
1902	1,692,599 26	1,074,070 22	63.5
1903	1,511,365 30	1,034,522 92	68.4
1904	1,502,518 52	899,004 65	59.8
1905	1,581,196 83	1,463,939 42	92.5
1906	1,628,982 01	1,394,987 73	85.6
1907	1,885,535 22	1,276,704 91	67.7
1908	1,864,861 07	994,487 39	53.3
1909	1,952,269 99	1,368,892 35	70.1
1910	2,180,135 74	1,689,065 81	77.4
1911	2,321,318 35	1,375,225 59	59.2
1912	2,667,902 00	779,238 00	29.2
1913	2,464,976 07	2,011,324 81	81.5
Totals	\$50,930,754 19	\$30,738,977 57	

"SURPLUS LINE" MARINE AND MISCELLANEOUS.

Twenty-four brokers transacted this character of insurance business in California during 1913, under the provisions of section 596 of the Political Code.

The returns made show an increase as shown by the following comparisons:

Net amount procured in 1913	\$10,505,027 69
Net amount procured in 1912	4,120,606 18
Increase	\$6,384,421 51
Net premiums collected in 1913	\$196,210 94
Net premiums collected in 1912	49,246 79
Increase	\$146,964 15

LIFE INSURANCE (ORDINARY).

The total number of companies authorized to transact this character of business in the State of California during 1913 was 48. Of these, 8 were organized under the laws of California and 40 under the laws of other states.

The insurance issued in 1913 amounted to \$97,868,666.00 represented by 43,678 policies, while that issued in 1912 amounted to \$85,162,790.00 represented by 36,016 policies, showing an increase of \$12,705,876.00 in amount of insurance issued, represented by 7,662 policies.

The total premiums received in 1913 amounted to-----	\$18,454,772 20
The total premiums received in 1912 amounted to-----	16,718,297 79
Increase -----	<u>\$1,736,474 41</u>
The total losses and claims paid in 1913 amounted to-----	\$6,944,709 28
The total losses and claims paid in 1912 amounted to-----	6,449,765 86
Increase -----	<u>\$494,943 42</u>
The number of policies in force on December 31, 1913, was-----	241,472
The number of policies in force on December 31, 1912, was-----	209,222
Increase -----	<u>32,250</u>
The amount of insurance in force on December 31, 1913, was-----	\$525,483,410 00
The amount of insurance in force on December 31, 1912, was-----	459,131,112 00
Increase -----	<u>\$66,352,298 00</u>

Five new legal reserve life insurance companies were licensed to transact business in California during 1913, namely:

American National Insurance Company, Galveston, Texas.

Connecticut General Life Insurance Company, Hartford, Connecticut.

Continental Life Insurance and Investment Company, Salt Lake City, Utah.

Great Republic Life Insurance Company, Los Angeles, California.

International Life Insurance Company, St. Louis, Missouri.

The following summary shows that the premiums received by the ordinary life insurance companies in California during the past thirty years have been \$212,976,929.34, and the losses and claims paid \$72,-818,314.47:

1884	\$1,548,671 16	\$1,426,340 26
1885	1,590,344 82	1,114,844 57
1886	1,802,916 68	1,116,729 44
1887	2,073,203 65	1,051,055 11
1888	2,839,141 80	1,205,106 91
1889	3,253,759 62	1,545,497 51
1890	3,507,207 07	1,485,143 27
1891	3,818,753 65	1,626,832 60
1892	4,096,824 84	1,594,898 56
1893	4,255,153 76	2,093,825 96
1894	4,086,307 40	1,943,243 18
1895	4,077,486 45	1,973,822 49

1897	4,252,455 64	2,068,975 06
1898	4,491,699 78	2,471,974 78
1899	4,925,429 09	2,473,543 38
1900	5,683,412 06	2,430,650 33
1901	6,242,443 41	2,975,847 61
1902	7,480,488 89	2,887,479 63
1903	8,866,405 31	2,881,932 78
1904	10,166,656 76	3,121,817 19
1905	10,550,503 83	3,400,490 37
1906	10,643,952 00	4,081,162 73
1907	11,017,207 20	4,995,417 25
1908	11,658,903 26	4,343,935 04
1909	12,557,869 31	4,404,398 96
1910	13,501,003 98	4,771,862 70
1911	14,811,167 84	5,719,644 03
1912	16,718,297 79	6,449,765 86
1913	18,454,772 20	6,944,709 28
Totals	\$212,976,929 34	\$72,818,314 47

INDUSTRIAL LIFE INSURANCE.

Five companies transacted this character of business in California during 1913. Of these, one was a California corporation and four were from other states.

The insurance issued in 1913 amounted to \$16,597,605.00 represented by 115,601 policies, while that issued in 1912 amounted to \$15,500,964.00 represented by 97,978 policies, showing an increase in amount issued of \$1,096,641.00 represented by 17,023 policies.

The total premiums received in 1913 amounted to	\$1,943,320 96
The total premiums received in 1912 amounted to	1,724,786 67

Increase	\$218,534 29
----------	--------------

The total losses paid during 1913 amounted to	\$509,252 59
The total losses paid during 1912 amounted to	420,678 02

Increase	\$88,574 57
----------	-------------

The number of policies in force on December 31, 1913, was	387,421
The number of policies in force on December 31, 1912, was	334,242

Increase	53,179
----------	--------

The amount of insurance in force on December 31, 1913, was	\$60,293,723 00
The amount of insurance in force on December 31, 1912, was	53,775,673 00

Increase	\$6,518,050 00
----------	----------------

The returns made by the companies transacting industrial business for the past ten years ending December 31, 1913, are indicated by the following summary:

	Premiums received	Losses paid
1904	\$367,152 51	\$169,933 98
1905	725,705 69	175,854 95
1906	810,355 30	213,436 29
1907	845,188 77	212,701 78
1908	920,464 73	225,829 95
1909	1,058,790 00	275,574 95
1910	1,285,416 24	305,356 64
1911	1,466,604 96	354,320 28
1912	1,724,786 67	420,678 02
1913	1,943,320 96	509,252 59
Totals	\$11,447,785 83	\$2,862,939 43

ASSESSMENT LIFE INSURANCE.

Six companies transacted this character of business in California during 1913.

The following comparisons show a decrease in premiums received and losses paid and insurance in force:

Net premiums or assessments received in 1913	\$307,063 96
Net premiums or assessments received in 1912	307,066 11
Decrease	\$2 15
Losses paid during 1913	\$254,500 00
Losses paid during 1912	263,000 00
Decrease	\$8,500 00
Amount of insurance in force on December 31, 1913, was	\$17,990,000 00
Amount of insurance in force on December 31, 1912, was	23,935,500 00
Decrease	\$5,945,500 00

MISCELLANEOUS INSURANCE.

All classes of casualty insurance show an increase over the preceding year except Burglary, Title, Workmen's Collective, and Live Stock, as shown by the following comparisons:

ACCIDENT AND HEALTH.

Premiums received in 1913	\$1,967,628 86
Premiums received in 1912	1,762,149 81

I certify the foregoing to be a full, true and correct statement of the receipts of the insurance department of the State of California for the year nineteen hundred and thirteen, as shown by the records of this office.

J. E. PHELPS,
Insurance Commissioner.

Subscribed and sworn to before me this 25th day of July, 1914.

NETTIE HAMILTON,
Notary Public in and for the City and County
of San Francisco, State of California.

SUMMARY OF INSURANCE BUSINESS

Transacted During the Year Ending

December 31, 1913

AS SHOWN BY REPORTS OF COMPANIES

(Tables 1 to 36 Inclusive)
